

Bath and North East Somerset

PLACEMAKING PLAN

PART:

1

District-wide Strategy and Policies

DRAFT PLACEMAKING PLAN: EXPLANATORY NOTE

The Placemaking Plan allocates specific sites for development and outlines a district-wide suite of planning policies. It complements and seeks to deliver the strategic framework set out in the Adopted Core Strategy. The Core Strategy forms Part 1 of the B&NES Local Plan and the draft Placemaking Plan is Part 2. For the purposes of clarity and convenience for plan users the Plans have been combined. Core Strategy text is that which is highlighted in grey. Any changes to the Core Strategy text are indicated by 'strike through' for deletions and 'underlining' for additions and are not highlighted in grey. In these instances the Placemaking Plan policy or text will supersede that set out in the Core Strategy. In combining the two Plans the text has been numbered sequentially. Core Strategy policy numbers remain unchanged. **The Placemaking Plan is presented in six volumes (as listed below) and plan users should ensure they refer to all relevant policies in relation to proposals:**

- 1. District-wide**
- 2. Bath**
- 3. Keynsham**
- 4. Somer Valley**
- 5. Rural Areas**
- 6. Appendices, including Policies map changes**

VISION AND DISTRICT-WIDE STRATEGY

INTRODUCTION

1. The Core Strategy is a key policy document for Bath & North East Somerset (B&NES) that puts in place a strategic planning framework to guide change and development in the District over the next 20 years and beyond.

2. The Core Strategy is shaped by the challenges that are specific to the District and the aspirations of its communities. These have been captured within two key documents:

- The Sustainable Community strategy is the ‘overarching’ strategy for B&NES which has been prepared by the Local Strategic Partnership and sets out a vision for the area to become a “distinctive place, with vibrant sustainable communities, where everyone fulfils their potential”. The Core Strategy is the spatial expression of the B&NES Sustainable Community Strategy;
- The Council’s long-term economic and regeneration aspirations for the main urban centres within the District are set out in the Futures for Bath, Keynsham and Somer Valley.

3. This chapter sets out:

- Where we are now: The Spatial Portrait uses a wide evidence base of information, statistics, studies and community involvement to identify the District’s main social, physical and economic characteristics and the key, strategic issues it faces.
- Where we would like to be: The Spatial Vision and Strategic Objectives look forward to 2029, setting out how we expect the District and its places to have changed and developed.
- How we get there: The Spatial Strategy is the means of delivering the vision and objectives.

4. Subsequent chapters set out the policy framework for the District’s different places, as well as general policies.

5. The Core Strategy, Part 1 of the Local Plan, does not set out site-specific proposals, other than the Strategic Site Allocations; instead it looks at the broad locations for delivering new development. Policies in the Core Strategy do not overlap with each other and therefore the Core Strategy should be read as a whole.

The Placemaking Plan, Part 2 of the Local Plan, will cover site allocations, detailed development management policies as well as local designations for the different places within the District, and the Joint Waste Core Strategy prepared by the four West of England authorities sets out a spatial strategy for dealing with waste including the allocation of sites. Details of other documents, under preparation are set out in the Local Development Scheme.

Diagram 1 – Structure of the Core Strategy Document

PLACEMAKING

6. Placemaking is a process and way of thinking aimed at achieving better quality places as the physical setting for life in cities, towns and villages. Placemaking is a multi-faceted approach to the planning, design and management of new development and spaces, as well as the protection and enhancement of existing assets. It is fundamentally about responding to the context of a place, through an understanding of its evolution, its functionality, and its impacts.

7. Crucially, it involves working in a collaborative way with those who live and work or have an interest in Bath and North East Somerset to discover what their needs and aspirations are and how these can be addressed through the Placemaking Plan. Ultimately it is about creating good places that promote people's health, happiness, and well-being.

8. Key to achieving better places for everyone therefore will be to make sure the planning policy framework for managing development, and conserving and safeguarding valued assets is tailored to deliver these objectives.

What is the Placemaking Plan?

9. The Placemaking Plan will help to deliver better places by facilitating the delivery of high quality, sustainable and well located development supported by the timely provision of necessary infrastructure. It complements the strategic framework in the **Core Strategy** by setting out detailed development and design principles for identified and allocated development sites, as well as a range of policies for managing development and protecting valued assets across Bath and North East Somerset.

Links with the Council Vision and Key Strategies

10. The Core Strategy contains the spatial vision for the District. Whilst the vision for the District, led by the Council with the other public services on the Public Services Board, has changed since the Core Strategy was written, the new vision incorporates key elements which will be achieved by the Core Strategy. This vision is also reflected in the main strategies that will help deliver it such as the Economic, Transport and Health & Wellbeing Strategy, all of which will be in part delivered by the Placemaking Plan.

11. The vision for the area led by the Council is:

Bath and North East Somerset will be internationally renowned as a beautifully inventive and entrepreneurial 21st century place with a strong social purpose and a spirit of wellbeing, where everyone is invited to think big - a 'connected' area ready to create an extraordinary legacy for future generations

12. This Vision is reflected in and will be delivered by the Council's key strategies (see below). The Placemaking Plan will help to deliver the Council's Vision and its three key strategies, as well as other supporting strategies and initiatives. The Council's 3 key strategies are:

Economic Strategy

Health & Well Being Strategy

Getting Around: Transport Strategy

13. There are a range of other Council strategies and initiatives supporting these three key strategies, including the Fit for Life strategy and those related to climate change, development and regeneration, housing, education and cultural development.

14. These strategies have influenced the evolution of the Placemaking Plan and contributed significantly to the aspirations for development sites and the planning requirements that will be set out in the Placemaking Plan.

SPATIAL PORTRAIT & KEY STRATEGIC ISSUES

Spatial Portrait

15. B&NES is a richly varied District in the south west of England. It stretches from the edge of Bristol, south into the Mendip Hills and east to the southern Cotswold Hills and Wiltshire border. It covers a total area of 570 km² and is home to about 178,000 people. The District encompasses a diverse range of places, with their own history, identity and communities. Its main urban centre is the city of Bath complemented by a range of towns and villages. It contains a series of outstanding historical, cultural and environmental assets, with a tradition of innovation and enterprise. A more detailed description of places within the District is painted in chapters 2-5.

16. The District forms part of the West of England sub-region which has a population of just over 1.1 million. With a working population of 510,000, the West of England has the second highest economic productivity outside of London. It enjoys a strategic location, reasonably well-served by the M4 and M5 motorways and rail links to London and the rest of the country. Bristol International Airport is one of the fastest growing regional airports in the UK.

Spatial Portrait

What is the District like now?

Key Strategic Issues

Facing the District

Visions and Objectives

How should the district change and what kind of place should it be in the future?

Spatial Strategy Placebased Policy Framework and Core Policies

Making sure new development delivers the Vision and Objectives

17. In addition to being part of the West of England sub-region the District has close functional and physical links with places within Wiltshire and Mendip. For example Bath acts as an employment and services and facilities centre for surrounding populations evidenced by journey to work patterns and public transport provision, the Somer Valley area transcends the administrative boundary between B&NES and Mendip and important Green Infrastructure corridors link B&NES and the neighbouring areas.

Bath

18. Bath is one of the UK's most liveable cities and offers an excellent quality of life. Its population is around 90,000, of which around 20% are students. Bath is well known as an international visitor destination, thanks to its cultural and built heritage, thermal springs and landscape – encapsulated in its inscription as a World Heritage site. Bath is a key economic centre in the West of England and is also one of the most important places of learning in the South West. The city also serves as a regional shopping centre, characterized by independent and boutique shops.

Keynsham

19. Despite its proximity to Bristol and Bath, Keynsham has retained its own identity and is surrounded by countryside which is protected by the Bristol / Bath Green Belt. The population is about 15,500 people with a high proportion of adults aged 65 and over. The town's dominant employer is the public sector. The town centre is characterized by local independent retailers, some large nationals, and charity shops. The full effects of the closure of the Chocolate Factory at Somerdale, are yet to be felt in the town.

The Somer Valley

20.

The Somer Valley covers the urban areas of Midsomer Norton, Westfield and Radstock, together with a rural hinterland containing the principal villages of Peasedown St John and Paulton. The area houses around 25% of the population of Bath and North East Somerset and is located 12 miles south west of Bath and 16 miles south east of Bristol. Midsomer Norton, Westfield and Radstock together make up the second largest urban area in the District, with a combined population of about 21,000. The Somer Valley was formerly part of the North Somerset coalfield and retains a rich industrial heritage. It has an engineering skills base and has been an important centre for the printing and packaging industry. However a number of recent factory closures have increased the already high level of out-commuting.

Rural Areas

21.

Over 90% of the District is rural and it has 47 rural parishes. The Government's vision for the countryside is a living, working, protected and vibrant countryside. The character of villages and landscape varies distinctly across the District, with almost a third of the District lying within the Cotswolds and Mendip Hills Areas of Outstanding Natural Beauty (AONBs). The parish Councils of Combe Hay, Englishcombe and Newton St Loe are discussing proposals with Natural England to extend the Cotswolds AONB so that it surrounds the city of Bath. The District's varied geology, topography and soils have given rise to a rich biodiversity, with some wildlife sites such as Chew Valley Lake being of international importance.

Key Strategic Issues

22.

While B&NES has many strengths, its outward image conceals a range of economic and social challenges that, left unchecked, will lead to long-term decline and increased inequalities. The particular challenges facing the distinct parts of the District, in Bath, Keynsham, the Somer Valley and the rural areas are described in the Futures Work and summarised in the relevant Place based sections of the Core Strategy. The B&NES Sustainable Community Strategy distils social, economic and environmental challenges into 6 key drivers of change:

Climate Change

23.

There is a need to tackle the causes and effects of climate change through lower carbon lifestyles; limiting our use of increasingly scarce resources; reducing our dependency on fossil fuels especially in light of 'peak oil' concerns; making sure that our area is resilient to climate change, particularly the potential for flooding. We will need to adopt environmentally friendly practices such as making buildings more energy efficient, increase the use of renewable energy, reduce car use and grow more local food.

We will also need to ensure that the natural environment is maintained and enhanced to maximise opportunities for mitigation. This will enable us to contribute to meeting the national, statutory carbon reduction target of 45% by 2020 from 1990 levels.

Demographic Change

24.

The total population of B&NES is expected to increase by 2029 due to increased life expectancy, natural increase and in-migration. We will have an ageing population (the number of over 80 year olds is projected to increase by 16%), the working age population is predicted to increase and the number of primary school age children will increase (projected 17% increase in number of 4-11 year olds); social trends and lifestyle changes will also affect the way we live. For example, the number of single person households is likely to increase; there may be changes in employment and work practices and shifts in work/life balance.

Inequalities

25.

The population of B&NES is relatively prosperous and healthy but there are pockets of deprived communities in the District. This manifests itself in a health and life expectancy gap, different levels of educational attainment and employment opportunities. There is a need to address these notable socio-economic gaps.

Locality

26.

The move toward localism, including enabling local communities to have a greater say in their neighbourhoods, providing local accessible services, more local food production and sustainable local energy production.

Growth

27.

The need for growth in housing and employment, due to population and lifestyle changes and an evolving economy, means that the District will change considerably over the coming years. The challenge is to grow in a way that is socially, economically and environmentally sustainable, with the necessary supporting infrastructure in place. Growth must not occur at any cost. B&NES' wealth of natural and cultural assets, including its watercourses, trees and woodland, countryside, parks, exceptional landscapes and historic built environment, make a huge contribution towards the attractiveness and liveability of the District. Development should be inspired by the unique character and design values of existing places. In all areas, it is vital that any development is of a high standard of design that enhances the characteristics that make B&NES such a distinctive District and protects the existing natural and built environment that supports the quality of life enjoyed by its community.

The Economy

28.

There is a need to create the conditions for a more environmentally sustainable economy with increased local employment, less overall commuting and a strong low-carbon business sector. The economy needs to be well placed to meet the needs of the 21st century and to be more diverse, productive and resilient facilitated by an increase in innovative technology related jobs, indigenous business growth and inward investment through provision of appropriate business space in the right locations. Leading education providers need seek to grow commercially and activities which reflect legislative and social change (for example, low-carbon related activities, such as retrofitting for energy efficiency) should be encouraged. All areas of the District have a part to play, for example, in the contribution the rural areas could make towards renewable energy and local food growing.

THE SPATIAL VISION AND STRATEGIC OBJECTIVES

29.

In response to these strategic issues, the Core Strategy sets out a spatial vision for the District along with 7 strategic objectives. Sustainable Development is the core principle underpinning the Core Strategy, expressed through the Spatial Vision and Strategic Objectives.

The Spatial Vision – What the Spatial Strategy Seeks to Achieve

Bath & North East Somerset will continue to be distinctive and become a more competitive area within the West of England sitting between the city of Bristol and market towns in western Wiltshire and northern Somerset. Its economic, cultural and social potential will be realised, providing opportunities for all, whilst maintaining and enhancing the area's environmental attractiveness and unique heritage. New jobs and housing will be supported by necessary infrastructure and provided in ways that mitigate the causes and effects of climate change, adapt to unavoidable climatic changes, are resilient to future fossil fuel scarcity and help the District have a low carbon economy.

Over the next 20 years and more the area will mature as a more beautiful and successful place where urban and rural communities flourish, health and well-being is improved, everyone can reach their potential and needs for materials and produce are met locally. The District will be made up of competitive, healthy and attractive urban, town and village centres within a rich and varied rural setting. The stunning built and natural environment will continue to provide a backdrop for a range of distinctive places to live, that can be stimulating and exciting, as well as calm and peaceful.

Bath's natural, historic and cultural assets, which combine to create a unique sense of place of international significance, will be secured and enhanced to maintain the city's key competitive advantage and unique selling point as a high quality environment, to live, grow a business, visit and invest.

The scope to further improve Bath's environmental quality will form the foundation of efforts to boost the city's profile as a more competitive and economic centre. The realisation of a range of development opportunities within the Central Area and Enterprise Area will greatly improve the city aesthetically and also enable Bath to position itself as a more entrepreneurial, innovative, creative and business friendly place. Economic development and productivity will therefore be

stimulated and facilitated, whilst simultaneously upgrading inherited townscape.

Where possible the built environment will evolve in a more energy and resource efficient manner and renewable and sustainable energy, appropriate to the Bath context, will be introduced. Alongside measures to mitigate and adapt to climate change and to pursue a reduced carbon economy, the diversification and growth of a low carbon economy are the key changes that are sought for Bath.

The delivery of new housing is a vital component of the vision and will help to create a sustainable relationship between the city's labour and job markets and support Bath's economic potential. Parallel investment in public transport infrastructure and walking and cycling will keep the city moving and enable more sustainable travel choices to be made.

Bath's already strong identity as a therapeutic place will be enhanced by boosting its performance as an enjoyable city for leisure, recreation and shopping with a vivacious cultural scene and a highly valued green infrastructure network.

Keynsham is a historic town that occupies a strategically important location between Bristol and Bath and is therefore well placed to improve and attract investment. It will continue to act as a market

town and service centre for the surrounding area. In responding to the loss of a major employer, it will evolve as a more significant business location. Keynsham will expand to accommodate a growing population, ensuring it retains its independence and its separate identity within an attractive rural setting. It will become a more sustainable, desirable and well-connected place in which to live and work, with an enhanced town centre inspired by its heritage and cherished rivers, park and green spaces.

The southern part of the District will become more self-reliant, facilitated by economic-led revitalisation alongside local energy generation. The roles of Midsomer Norton and Radstock Town Centres will be complementary to each other and continue to provide key employment, services and leisure provision for both their communities and those within the Somer Valley. Midsomer Norton town centre will be the principal centre with an improved public realm well related to the new integrated Town Park. Radstock town centre will continue to provide a focal point for the community and realise the potential of tourism based on its mining heritage, green routes including cycle ways and attractive rural hinterland.

Villages of the Somer Valley will continue to provide for the needs of their local communities.

In the rural areas locally identified needs will be met whilst maintaining the individual character of villages. The rural economy will evolve and new types of jobs and ways of working will provide more locally based employment opportunities. The potential for the rural area to play an important role in local food production will be promoted. Community involvement will help facilitate improvement in the provision of community facilities and public transport.

Strategic Objectives

30.

The vision is the spatial expression of the Council's Sustainable Community Strategy. It establishes the overall direction subsequently articulated in more specific spatial objectives. These strategic objectives form the link between the high level vision and the spatial strategy.

31.

The strategic objectives below expand the vision into specific issues for the area which need to be addressed. The objectives are underpinned by a monitoring framework of targets and indicators to measure the performance of the Local Plan.

Objective 1

SCS Driver: Climate Change

Cross cutting objective: Pursue a low carbon and sustainable future in a changing climate

- reducing the need to travel by achieving closer alignment of homes, jobs, infrastructure and services
- ensuring the location and layout of new development enables and encourages people to make the fullest possible use of public transport, walking and cycling
- encouraging and supporting the increased generation and use of renewable and low carbon energy, including through the delivery of community led schemes
- promoting sustainable and energy efficient design and construction
- shaping places so as to minimise vulnerability and provide resilience to impacts arising from climate change including increased flood risk

- facilitating the prudent use and reduced consumption of key natural resources such as undeveloped land, energy, water and minerals
- maintaining and enhancing a network of connected and multifunctional green spaces for people and wildlife serving climate change adaptation and mitigation purposes

Objective 2

SCS Driver: Growth

Protect and enhance the District's natural, built and cultural assets and provide green infrastructure

- ensuring that growth and development takes place within the environmental capacity of the District
 - making optimum use of brownfield opportunities in meeting housing and economic development needs and avoiding greenfield land as far as possible
- helping to conserve and enhance the quality and character of our built and natural heritage
 - maintaining and enhancing an accessible and multifunctional network of well linked green spaces
 - helping to conserve, enhance and restore the diversity and resilience of the District's wildlife
 - helping to avoid water, air, light and noise pollution and the contamination of land
 - capitalising on the role our heritage has in promoting local distinctiveness, place-making and supporting regeneration
 - maintaining an outstanding built and natural environment by ensuring that new development responds appropriately to the locally distinctive context and meets high standards of design
 - facilitating continuing and wide participation in cultural activities

Objective 3

SCS Driver: Economy Inequalities Locality

Encourage economic development, diversification and prosperity

The Council's Economic Development Strategy seeks to stimulate a more productive, competitive and diversified economy across the District and promotes a higher value added economy (smart growth) where indigenous companies are retained and able to grow, other knowledge based sectors are attracted to the area and the industrial sector continues to contribute to the local economy.

- increasing the availability of modern office and unit space in Bath thereby enabling indigenous companies to expand and the city to better respond to external demand
- maintaining an appropriate supply of land in Bath for industrial processes and services to ensure the city retains a mixed economy
- enabling tourism to continue to make an important contribution to the economy of Bath and promoting the tourism potential of other parts of the District e.g. by facilitating the provision of visitor accommodation

- capitalising on innovation opportunities arising from higher education institutions, improving educational facilities to help provide the skills that support knowledge based sectors and retaining those skills and talents in the city and wider area

- repositioning Keynsham as a more significant business location enabling it to attract new employers to compensate for the closure of Cadbury Somerdale
- ensuring that a sufficient and responsive supply of appropriate land and premises is available and improvement of skills is facilitated at Midsomer Norton and Radstock to help strengthen their roles as employment centres for the southern part of the District

enabling small scale local employment development, including those related to innovation opportunities, in the rural areas

Objective 4

SCS Driver: Growth Inequalities Demographic Change

Invest in our city, town and local centres

- Bath city centre and Keynsham, Midsomer Norton and Radstock town centres need to be improved as centres for social and economic activity and as places for entertainment, culture and shopping. The local and neighbourhood centres across the urban and rural parts of the District need to be sustained, so they continue to play an important role in meeting the day to day needs of their local residents.
- enhancing Bath's central shopping area, to maintain its competitiveness, diverse offer and reputation for independent and niche retailing
- introducing more commercial space, suitable for a range of enterprises, as part of new mixed use developments on underperforming sites in and close to Bath city centre
- improving the quality and capacity of shops within the core of Keynsham and Midsomer Norton town centres

- introducing more office and residential floor space into Keynsham, Midsomer Norton and Radstock town centres
- improving the quality of the public realm in the city, town and local centres
- providing better pedestrian and cycle routes into and within the city, town and local centres
- ensuring existing and proposed parks are well integrated into and play a central role in the centres of Bath, Keynsham and Midsomer Norton
- enabling appropriate tourism opportunities in the city and town centres
- protecting and enhancing the range of services and facilities provided in local, neighbourhood and village centres, encouraging the provision of efficient, low carbon energy for example from District heating or combined heat and power systems.

Objective 5

SCS Driver: Economy Inequalities Locality

Meet housing needs

- enabling the delivery of new homes needed to respond to expected demographic and social changes and as far as possible to support the labour supply to meet our economic development objectives
- ensuring that the new homes provided are of high quality design and reflect and cater for a range of incomes and types of household, including those in need of affordable housing
- addressing the accommodation needs of gypsies and travellers
- ensuring the accommodation needs of any increase in the number of students can be met sustainably
- ensure that the development of new homes is aligned with the provision of all the necessary infrastructure

Objective 6

SCS Driver: Inequalities

Plan for development that promotes health and well being

- enabling more opportunities for people to lead healthier lifestyles and have a greater sense of well-being through facilitating active modes of travel, encouraging social interaction and designing high quality, safe streets and spaces
- Promoting and delivering local employment, training and regeneration opportunities that can contribute to a reduction in the health and social inequalities across the District encouraging and facilitating increased local food production
- ensuring the timely provision of social and physical infrastructure, including health, welfare, spiritual, recreational, leisure and cultural facilities

Objective 7

SCS Driver: Economy & Growth

Deliver well connected places accessible by sustainable means of transport

In conjunction with the Joint Local Transport Plan, the Local Plan will deliver this by:

- locating and designing new development in a way that reduces the need and desire to travel by car and encourages the use of public transport, walking and cycling
- ensuring that development is supported by high quality transport infrastructure which helps to increase the attractiveness of public transport, walking and cycling
- promoting improved access to services especially for rural and more remote areas

SPATIAL STRATEGY FOR BATH & NORTH EAST SOMERSET

32.

The principal purpose of the Core Strategy is to set out clearly the spatial distribution of development within the District in order to deliver the vision and strategic objectives outlined above. It provides an overarching spatial strategy for the District as well as specific policy frameworks for Bath, Keynsham, the Somer Valley and the Rural Areas. Where land is to be released from the Green Belt, strategic sites are allocated. The Core Strategy also includes generic core policies applicable across the District as set out in section 6. The policy approach takes account of national policy guidance, the results of key studies as well as the issues identified through the consultations and public engagement on the Core Strategy with stakeholders and local communities.

33.

Table 3 at the end of this chapter sets out how the objectives are delivered through national policies, Core Strategy policies or other LDF documents.

Development of the Spatial Strategy

34.

Formulation of the policy framework for the District has been guided by the NPPF and entailed analysis of evidence, formulation of options to meet the objectives, engaging with local communities, testing options through the sustainability appraisal and assessing deliverability. Account has been taken of the District's functional relationship with neighbouring authorities. Please note the evidence base supporting the Core Strategy is listed and is available on the Council's website at www.bathnes.gov.uk/corestrategy or on request.

35.

Development Needs: The Council has undertaken an assessment of the needs of development within the District during the plan-period. This includes assessing the space needed for economic growth, housing, retail provision and social needs. This takes account of the Council's objective of promotion of a higher value economy rather than only volume growth. The Council has prepared a Strategic Housing Market Assessment (SHMA) to help assess its full objectively assessed housing needs in the housing market area over the plan period up to 2029.

36.

In terms of affordable housing need, Bath has one of the widest house price to earnings ratios outside of London but affordability varies across the District. The Council has therefore undertaken a viability study to inform a new policy framework on securing affordable housing through the planning system.

37.*Development land supply:*

A detailed assessment has been undertaken of the capacity of the District's settlements for delivery of new housing in the SHLAA, jobs and community facilities. This has included identifying suitable and deliverable development sites, understanding the environmental constraints including potential flood risk, assessing the appropriate mix of uses and densities and ensuring the necessary infrastructure is in place or can be secured to deliver mixed and balanced communities. It also looked at the opportunities to re-use empty homes and under-used properties.

38.

Infrastructure: An underlying principle in the preparation of the Core Strategy has been the need for new development to be well aligned with the necessary infrastructure, including transport, community facilities and green infrastructure. The Infrastructure Delivery Programme (Information Paper 1) provides an assessment of the infrastructure needed to underpin the spatial strategy.

39.

Environmental capacity: The District is renowned for its outstanding environment. Bath is the only complete city in the UK which is inscribed as a World Heritage Site; the high quality of the landscape is recognised by the designation of two Areas of Outstanding Natural Beauty; there are over 50 Conservation Areas in the District and Bath has the highest concentration of Listed Buildings outside of Westminster. The District also enjoys a rich and diverse biodiversity resource, including many protected species and habitats and includes or is adjacent to a number of sites of European importance for bats and wetland birds. These European Sites are protected through the Habitat Regulations. In this context bats are a significant issue as the District supports important bat foraging areas, commuting routes and roosts of importance to the integrity of up to three European Sites. For clarity, development likely to have a significant effect on a European site either alone or in combination with other plans or projects, and which cannot be adequately mitigated, would not be in accordance with the Development Plan. The Council has assessed the impact of various policy proposals and alternative options on the Environment through the sustainability appraisal, the Habitats Regulation Assessment (HRA) and locational investigations.

**40.**

Local Communities: National policy requires that the results of public engagement exercises should be treated as evidence in the development of the Core Strategy. The preparation of the Core Strategy has therefore entailed close working with local groups and communities in order to understand local priorities. This has included various economic, environment and community groups in Bath, the Somer Valley partnership, the Keynsham Development Advisory Group as well as parish and town Councils.

41.

Sub-regional context: The Spatial strategy for B&NES must take account of the strategies and programmes of neighbouring authorities, especially in the West of England.

Summary of the Spatial Strategy for B&NES

Scale and location of growth:

42.

Based on the demographic projections in the SHMA, there is a need for about 9,000 new dwellings over the plan period, of which about one third is for affordable housing (See Column B in Table 1A below).

43.

Table 1A shows that the supply of market housing has been increased to enable the delivery of the full assessed need for affordable housing. This is necessary because much of the supply of market housing (built, committed, and small windfall sites) will not yield affordable housing.

44.

In addition, the NPPF requires that when assessing need, full account is taken of market and economic signals. The increase in market housing above the figure derived from the demographic projections is a necessary market adjustment given the character of the housing market in the District and particularly at Bath.

45.

The assessment of housing needs is based on two important assumptions. Firstly, the SHMA assumes that the expected modest growth in the student population at Bath's two universities will be accommodated in the planned growth of mainly on-campus new student accommodation. If the provision of purpose-built student accommodation does not keep up with the growth in the resident student population, more market housing will be needed because of the pressure on the private letting market. Secondly, the SHMA assumes that the contribution to the provision of affordable housing needs from private rented accommodation where occupiers are receiving housing benefit will continue at a similar scale in the future. If this contribution were to significantly fall, the need for new affordable housing would increase.

Table 1A – Objectively assessed need for housing

	A Local Plan Backlog 1996-2011	B Demographic Need 2011-2029	Sub – Total A + B	Total assessed needs
Market housing	757	6,075	6,832	9,646
Affordable housing	410	2,880	3,290	3,290
Total housing	1,167	8,955	10,122	12,956

46. The Council intends to meet in full the total assessed need of about 13,000 dwellings. Thus the housing requirement identified in the Plan which it seeks to deliver is also about 13,000 dwellings. It is against the requirement of 13,000 that the five-year supply of housing will be maintained. The 13,000 is not intended as a cap on housing delivery. For example, additional large windfall sites may come forward for development or the contribution to supply assumed to come from small windfall sites may be exceeded.

47. In order to meet the economic growth aspirations, the Plan also enables the delivery of around 10,300 new jobs.

48. The spatial distribution of housing across the District is set out in the Key Diagram and summarised in Table 1B below. The strategy is to locate new development in the most sustainable locations and the priority is to steer growth primarily to brownfield land in urban areas of Bath, Keynsham and the larger settlements in the Somer Valley. However, in order to meet the housing requirement and facilitate economic growth in accordance with the objectives of the Core Strategy, some greenfield land is also required, including some sites to be released from the Green Belt because these are the most sustainable locations.

The identification of land for development has sought to minimise the impact on the environment and the harm to the Green Belt, as well as taking account of infrastructure requirements. The Council has therefore sought to make provision for the level of development likely to be needed. The broad spatial principles are summarised below and elaborated in the place-based chapters 2-5.

Table 1B – spatial distribution of the housing requirement

	Total housing
Bath	7,020
Keynsham	2,150
Somer Valley	2,470
Rural Areas	1,120
Whitchurch Green Belt	200
Total	12,960

Actual supply figures in November 2013 SHLAA trajectory have been rounded to the nearest 10

49.

Bath is the District's economic driver and is the primary focus for new development. It is also an important sub-regional economic centre. Significant provision is made within Bath for economic growth, particularly modern employment space to meet the changing needs of the economy and take advantage of Bath's competitive position. The Council's policy of 'smart' growth promotes higher value sectors rather than only volume growth. Key areas of change within the city are along the riverside, especially, in the Enterprise Area. In order to meet development needs, land is released from the Green Belt at Odd Down and allocated for development.

50.

Keynsham currently has a balance between numbers of resident workers and jobs but experiences significant in and out-commuting in light of the mismatch of resident workforce and types of available jobs. A focus will be to generate a range of jobs more suitable to the resident workforce. The key areas of change in Keynsham will be in the town centre and at Somerdale which has significant implications for the future of the town. In addition land is removed from the Green Belt to the south west and east of the town and allocated for development in order to provide additional employment floor space and housing. However, infrastructure constraints and national Green Belt objectives limit the level of development that the Town can accommodate. Land is also removed from the Green Belt at East Keynsham and safeguarded for possible development in the future. Development of this land will be permitted only when allocated for development following a review of the plan. These changes do not undermine the Core Strategy objective to maintain the town's separate identity.

51. In the *Somer Valley* there is significant net out-commuting due the size of the employment base but there are also significant residential commitments on both greenfield and brownfield sites. The area does not have an operating rail link, there are no direct links to the motorways and there is limited scope to provide substantial infrastructure improvements in the Plan period. The strategy therefore recognises this position, and seeks to facilitate economic-led regeneration enabling job growth in the area. The focus for change will be in the town centres and on vacant and under-used sites within the Housing Development Boundary. The Housing Development Boundary **will be** has been reviewed in the Placemaking Plan.

52. In line with national policy and sustainability principles, new development in rural areas will be restrained in comparison with the urban areas, although provision is made to meet local needs, such as affordable housing, and to benefit the rural economy. New development is focussed at those settlements which have a range of local facilities, good public transport access and community support. The strict controls in the Green Belt will continue to apply to large parts of the rural areas and there is restraint on development that would be out of scale or harm the character of the open countryside.

53. However, in order to meet development needs during the Plan period, land is released from the Green Belt and allocated for development at Whitchurch. Whilst not well placed for Bath, the Council's sustainability appraisal identifies land on the edge of Bristol as being a relatively sustainable location.

54. *The Green Belt* is shown on the Key Diagram. The development of the spatial strategy has sought to minimise the impact on the Green Belt as far as possible. However, as described above, four strategic changes are made to the inner Green Belt boundary to release land to meet the need for new development. The new detailed boundary is set out on the Policies Map.

55. *Nature of growth:* The spatial strategy seeks to limit the impact of new development as a cause of climate change in terms of design and construction and also takes account of the impacts of climate change. Particular emphasis is also placed on the quality of new development and seeking to ensure the different needs of the District's communities, such as housing type and size or workspace needs are addressed.

56. *Delivery:* The scale of new homes entails a significant uplift in past rates of delivery from around 380 (2001-11) to an annualised average of 700+ (2011-29). Diagram 3a below sets out the proposed housing trajectory as at adoption of the Plan. Completions during 2011-2013 have been below the required annual average so there is already a shortfall in delivery. To recover from this shortfall, the annual rate of delivery required for the first five year period from adoption (2014-19) has been increased to 850 pa (4,250 dwellings over the 5 year period). A 20% buffer will be needed in the calculation of the 5 year housing supply at least for this first Plan period. Subject to delivery performance, this may decrease to 5% later in the plan period.

57. The take up of floorspace for economic development and the generation of additional employment is dependent on national economic performance as well as planning policy and local and sub-regional economic strategies. The jobs figure in the Plan is not a cap and additional growth will be enabled, if possible, where development would be sustainable.

Diagram 3a Housing Trajectory as at adoption

Note: completions for 2013/14 are provisional pending the completion of full year monitoring.

58.

The Infrastructure Delivery Programme (IDP) outlines how necessary social, transport and green infrastructure are aligned with new development. It focuses particularly on delivery mechanisms in the first 5 years of the Plan period. Essential infrastructure required to support the District-wide strategy is outlined in the relevant section of the Core Strategy.

POLICY DW1: District-wide spatial Strategy

The overarching strategy for B&NES is to promote sustainable development by:

1 focussing new housing, jobs and community facilities in Bath, Keynsham, and the Somer Valley particularly ensuring:

a there is the necessary modern office space in **Bath** within or adjoining the city centre to enable diversification of the economy whilst maintaining the unique heritage of the City

b sufficient space is available in **Keynsham** to reposition the town as a more significant business location whilst retaining its separate identity

c there is deliverable space to enable job growth in the towns and principal villages in the **Somer Valley** to create a thriving and vibrant area which is more self-reliant socially and economically

d development in **rural areas** is located at settlements with a good range of local facilities and with good access to public transport

2 making provision to accommodate:

- a net increase of 10,300 jobs;
- an increase in the supply of housing by around 13,000 homes.

3 prioritising the use of brownfield opportunities for new development in order to limit the need for development on greenfield sites

4 retaining the general extent of Bristol – Bath Green Belt within B&NES, other than removing land to meet the District’s development needs at the following locations identified on the Key Diagram and allocated on the Policies Map:

- Land adjoining Odd Down
- Land adjoining East Keynsham
- Land adjoining South West Keynsham
- Land at Whitchurch

5 requiring development to be designed in a way that is resilient to the impacts of climate change

6 Protecting, conserving and enhancing the District’s nationally and locally important cultural and heritage assets

7 protecting and enhancing the District’s biodiversity resource including sites, habitats and species of European importance

8 ensuring infrastructure is aligned with new development

9 Reviewing the Core Strategy at around five yearly intervals and when necessary, make changes to ensure that both:

a the objectives are being achieved particularly the delivery of the housing and work space targets set out in Table 9 to ensure that there remains a flexible supply of deliverable and developable land; and

b the Core Strategy is planning for the most appropriate growth targets, particularly housing and work space/jobs.

The first review will be timed to co-ordinate with the review of the West of England Core Strategies in around 2016.

Table 2 – Locational Policy Framework

Locational Policies

Core Strategy Policy

The Policy Framework for the location of new development is as follows:

Bath	Policies B1, B2, B3, B3A, B3C, B4
Keynsham	Policies KE1, KE2, KE3A & B, KE4
Midsomer Norton, Westfield & Radstock	Policies SV1, SV2, SV3
Paulton, Peasedown St. John	Policy SV1
Timsbury, Camerton, Hallatrow, High Littleton, Farrington Gurney	Policy SV1, and Policy RA1 or RA2
Bathampton, Batheaston, Bathford, Bishop Sutton, Clutton/Temple Cloud, Compton Martin, East Harptree, Farrington Gurney, Farmborough, Hinton Blewett, Saltford, Camerton, Ubley, West Harptree and Whitchurch	Policy RA1 or RA2
Whitchurch	Policy RA5
Chew Magna, Chew Stoke, Claverton, Combe Hay, Corston, Englishcombe, Freshford, Hinton Charterhouse, Kelston, Marksbury, Monkton Combe, Newton St. Loe, Pensford, Priston, Shoscombe, South Stoke, Stanton Drew (including Upper Stanton Drew and Highfields), Tunley, Upper Swainswick, and Wellow	Policy GB2

59.

The villages identified in Table 2 are those with a Housing Development Boundary. In addition to the villages identified above there is a range of smaller villages and hamlets in the District where a Housing Development Boundary is not defined. These settlements are treated as open countryside with regard to the policy framework for residential development.

Housing development on non-allocated sites at Bath, Keynsham and Somer Valley

Housing proposals in Bath

60. Policy B1(3) in the Bath place-based section sets out the housing distribution to be planned for within Bath and clarifies that residential development will be acceptable in principle provided the proposal lies within the existing urban area of Bath as defined by the Green Belt boundary subject to compliance with all other policy considerations (e.g. policies relating to design, density, heritage, nature conservation, landscape and transport).

Housing proposals in Keynsham and the Somer Valley

61. For *Keynsham*, the policy approach for considering housing development proposals on non-allocated sites is made clear in the Core Strategy. Policy KE1(2b) in the Keynsham place-based section allows residential development if it is within the Housing Development Boundary (HDB) or forms an element of Policies KE2 (Town Centre/Somerdale Strategic Policy), KE3 (East Keynsham Strategic Site Allocation) or KE4 (South West Keynsham Strategic Site Allocation).

62. In respect of the *Somer Valley*, Core Strategy Policy SV1(4) relates to the housing proposals in Midsomer Norton, Radstock, Westfield, Paulton and Peasedown St. John and clarifies that Policies RA1 and RA2 are applicable to the other settlements in the Somer Valley. Policy SV1 confirms that housing development will be acceptable in principle within the HDB and that residential development on sites outside the HDB will be acceptable if identified in an adopted Neighbourhood Plan (see the Somer Valley place-based section).

Housing proposals in the villages outside the Green Belt

63. In the Rural Areas Core Strategy Policies RA1 and RA2 allow residential development in principle within the HDB in villages not washed over by the Green Belt. The strategy for the rural areas is to enable housing development of around 50 dwellings in villages that meet the Policy RA1 criteria. For those villages which do not meet the Policy RA1 requirements, Policy RA2 applies and limited residential development of around 10-15 dwellings is considered acceptable in principle in those villages. This level of development at RA1 and RA2 villages is in addition to small windfall sites within the housing development boundary and will enable delivery of the 1,120 dwellings for the Rural Areas during the Plan period. The application of these policies is explained in more detail in the Rural Areas section below.

Housing proposals at villages in the Green Belt

64. Although the construction of new buildings is regarded as inappropriate development in Green Belt, limited infilling in villages is an exception to this policy. For settlements washed over by the Green Belt, Policy GB2 will apply as set out in the Green Belt Development Management Policies section. Any proposals outside the HDBs would be considered inappropriate development in the Green Belt and Core Strategy Policy CP8 would apply.

Rural Areas

Meeting local need for housing and employment

There are a number of villages where:

- access to facilities and public transport is best
- there is capacity for development

These villages are to be the focus for new small scale development under Policy RA1.

Housing

65. In accordance with the Spatial Strategy for the Somer Valley (Policy SV1) Paulton and Peasedown St John are not considered under the rural areas strategy but within the Somer Valley.

66. Policy RA1 should be considered alongside Core Policy CP8 Green Belt. Given the overall level of housing required during the plan period and the spatial strategy for meeting this requirement it is not considered that exceptional circumstances exist to warrant changing the inset boundaries at the villages excluded from the Green Belt that meet the criteria of Policy RA1. However, there may be opportunities to deliver some housing within the housing development boundary in these villages excluded from the Green Belt (insets).

Therefore, in accordance with the NPPF proposals for development in the Green Belt will not be acceptable unless very special circumstances for development can be demonstrated.

67. The strategy for the rural areas therefore is to enable housing developments of around 50 dwellings at each of the villages (in addition to small windfall sites within the HDB) which meet the criteria of Policy RA1. To secure and maintain balanced and more self-contained communities and reduce the need to travel, a village meeting the RA1 criteria should have a primary school with sufficient capacity (or ability to expand) to accommodate the primary education needs of the existing population and those arising from the development as expected by Policy LCR3A. This will ensure consistency with Policy CP13 which requires that new development is supported by the timely delivery of required infrastructure. The allocation of sites will be have been considered in more detail through the Placemaking Plan in conjunction with Parish Councils as the locally elected representatives of their communities. The Housing Development Boundaries shown on the Policies Map (saved from the existing Local Plan) will be have been reviewed as part of the Placemaking Plan to incorporate the sites identified and /or enable new sites to come forward.

Sites identified in adopted Neighbourhood Plans that adjoin the housing development boundary of villages meeting the criteria of Policy RA1 will also be appropriate and these may come forward for inclusion as a part of the Placemaking Plan or subsequent to it.

68. To complement this approach, some limited residential development of around 10-15 dwellings (in addition to small windfall sites within the HDB) will be allowed in those villages not meeting the criteria and located outside the Green Belt. Such development will only be permitted within the housing development boundary defined on the Policies Map (see Policy RA2). In those villages washed over by the Green Belt development proposals will be considered in the context of national policy set out in the NPPF. In addition the rural exceptions site Policy RA4 will provide the opportunity for affordable housing based on local needs.

69. A range of different types and sizes of housing is needed across the rural area. In many villages smaller dwellings are required in order to meet the needs of young people and older people wishing to down size. Core Policy CP9 seeks to ensure that housing development proposals meet needs arising from local demographic circumstances.

Employment

70. Where local need is identified, small scale employment developments will be appropriate at the identified villages (see Policy RA1). The section on rural economic development expands on appropriate development of employment uses beyond identified villages. Other policies relating to the rural economy can be found in the A Prosperous Economy chapter.

71. In villages washed over by the Green Belt with a housing development boundary as defined on the Policies Map proposals for residential and employment development will be determined in accordance with national policy set out in the NPPF.

POLICY RA1

Development in the villages meeting the listed criteria

At the villages located outside the Green Belt or excluded from the Green Belt, proposals for residential development of a scale, character and appearance appropriate to the village and its setting will be acceptable within the housing development boundary provided the proposal is in accordance with the spatial strategy for the District set out under Policy DW1 and the village has:

a at least 3 of the following key facilities within the village: post office, school, community meeting place and convenience shop, and

a a primary school and at least 2 of the following key facilities within the village: post office, community meeting place and convenience shop, and

b at least a daily Monday-Saturday public transport service to main centres,

At the villages outside the Green Belt which meet these criteria, development sites will also be identified in the Placemaking Plan and the housing development boundary will be reviewed accordingly to enable delivery during the Plan period of the 1,120 dwellings identified on the Key Diagram. Residential development on sites outside the Green Belt adjoining the housing development boundary at these villages will be acceptable if identified in an adopted Neighbourhood Plan.

Proposals at villages located outside the Green Belt or excluded from the Green Belt for employment development of a scale, character and appearance appropriate to the village and its setting will be acceptable within and adjoining the housing development boundary on land outside the Green Belt.

POLICY RA2

Development in villages outside the Green Belt not meeting Policy RA1 criteria

In villages outside the Green Belt with a housing development boundary defined on the Policies Map and not meeting the criteria of Policy RA1 proposals for some limited residential development and employment development will be acceptable where:

a they are of a scale, character and appearance appropriate to the village

b in the case of residential development they lie within the housing development boundary

c in the case of employment development they lie within or adjoining the housing development boundary

At the villages which meet the above criteria, residential development sites may also need to be identified in the Placemaking Plan and the housing development boundary reviewed accordingly to enable delivery of 1,120 dwellings identified on the Key Diagram. Limited residential development on sites adjoining the housing development boundary at these villages will be acceptable if identified in an adopted Neighbourhood Plan.

INFRA- STRUCTURE

72.

Delivery of the District wide spatial strategy will need to be supported by the provision of necessary infrastructure. The key district-wide infrastructure requirements identified in the B&NES Infrastructure Delivery Programme is summarised below, these are supplemented by infrastructure requirements included in each of the place based sections. The Infrastructure Delivery Programme also contains a number of desirable infrastructure items which are not included below, infrastructure planning involves an ongoing process of dialogue and communication with infrastructure providers and as further evidence is developed and future funding is secured additional items may be added to the Infrastructure Delivery Programme or their status may be upgraded or altered.

Table 3 – Key District-wide Infrastructure

MONITORING & REVIEW

73.

The strategic objectives for the Local Development Framework are set out in chapter 1.

These objectives will be delivered through:

- The spatial strategy set out in the Core Strategy
- Core policies and place specific policies
- Other Local Development Documents

74.

In order to ensure the strategic objectives are being delivered progress needs to be monitored. Set out below is a monitoring framework which comprises a range of indicators against which performance in delivering the strategic objectives and the associated policies can be monitored. These indicators are grouped by objective and relate to the policies in the Core Strategy which are charged with enabling the delivery of that objective. Setting out the framework in this way enables a clear path to be established from the objective, to the policies and the indicators. Only the main policies that deliver an objective are identified in the framework and this is therefore a simplification of complex relationships between policies and delivery of an objective.

75.

Monitoring of other indicators related to policies in the Local Plan also takes place. These indicators are not included here as the schedule below is the Core Strategy monitoring framework. The monitoring framework will be added to in the future as the range and number of indicators will increase as additional policies are prepared and adopted in other Local Development Documents.

76.

Progress against many objectives/policies can be measured quantitatively and this is reflected in the targets set out in the framework below. Where appropriate quantification of the objective is set out in a way that will help to inform review of the Core Strategy in accordance with the programme set out in paragraph 7.05 77 below. However, other objectives/policies do not lend themselves to quantification and where appropriate a qualitative target is included in order to enable performance to be measured. Monitoring performance against the indicators set out is principally undertaken through the Authority's Monitoring Report (AMR). Requisite parts of the AMR are published on an annual basis and in addition to setting out monitoring information include analysis of whether and how the policies are being delivered. In so doing it will inform the process of Core Strategy policy review and provides evidence to inform formulation of policies in other Local Development Documents.

77.

The Core Strategy is programmed to be reviewed about every 5 years to enable flexibility in response to changing circumstances. The review will be informed by regular monitoring as set out in Table 9 as well as ensuring that the Core Strategy evidence base remains up-to-date. The review process will commence in advance of the review date in order to enable the timely and considered preparation and adoption of revised policies. In light of the Duty to Co-operate, the first review will be timed to enable co-ordination with the review of the Core Strategies of adjoining Authorities in the West of England.

Delivery

78.

If monitoring demonstrates that the planned housing provision, including affordable housing, is not being delivered at the levels being planned for and there would be no reasonable prospect of the planned delivery of around 13,000 homes to 2029, then changes will be made to Core Strategy to rectify the housing shortfall taking account of the impact of the performance of the economy on the need for and delivery of housing. This may include changes to the spatial strategy.

Review of growth targets

79.

The Council will also monitor economic growth rates, to assess whether planned targets for workspace continue to be appropriate. If required the Council will agree revised targets, taking account of the West of England Strategic Economic Plan and make any necessary changes to the spatial strategy to meet the new targets if necessary.

Duty to Co-operate

80.

Plan reviews will be undertaken in co-operation with neighbouring authorities, particularly in the West of England in accordance with the Duty to Co-operate to ensure that cross-boundary issues are addressed. This will include a review of the plan period. The timetable for the review of Local Development Documents is set out in the Council's Local Development Scheme.

81.

Arrangements are already underway to review the West of England SHMA in preparation for a review of West of England Core Strategies in around 2016. This will entail a co-ordinated response to the outputs of the updated SHMA. The SHMA review includes a review of the Housing Market Area.

82.

If the SHMA review demonstrates the continued existence of separate housing market areas for Bath and Bristol, then under the duty to co-operate, B&NES will continue to work closely with the adjoining West of England authorities to consider the most appropriate proposals for accommodating housing needs that could not otherwise be met within the Bristol Housing Market Area.

83.

If the SHMA review indicates that B&NES is part of the West of England HMA, and additional strategic housing provision is required, its delivery will be determined on a West of England-wide basis through the duty to cooperate.

84.

In line with the principles of spatial planning the vision and objectives of the Local Development Framework will not be implemented solely via planning policies alone. Delivery will be dependent upon the actions of other parts of the Council and other agencies. Table 5 identifies the key strategies and plans that will help to deliver the Core Strategy objectives and for the core policies the primary means of delivery is highlighted in this Chapter 6.

Table 5 Monitoring of Strategic Objectives

Strategic Objective	Policy	Indicator	Target
1. Pursue a low carbon and sustainable future in a changing climate	CP3 Renewable Energy	<ul style="list-style-type: none"> • Proportion and number of renewable energy schemes granted planning permission annually • Amount of renewable energy generated by installed capacity, for electricity (MWe) and heat (MWth) • Amount of renewable energy generated from renewable energy sources annually (measured via 'Feed in Tariff data). CORE AND DEVELOPMENT MANAGEMENT POLICIES

INTRODUCTION

85.

The spatial strategies set out in the place based sections cover the different areas of the District. There are also a number of generic issues which need to be addressed through District-wide policies in order to implement the vision and spatial objectives. As well as providing the long term policy framework for the District, they will support the delivery of development and corporate actions, and they will guide the content of other policies in the Local Development Framework such as the Placemaking Plan. After each of the core policies the main planning mechanisms by which the Council will seek to deliver the policy are set out. The delivery section is not part of the relevant core policy.

86.

The core policies are complemented by a range of district-wide policies positive and proactive development management policies to help deliver the objectives of the Core Strategy, taking account of national planning policy (NPPF). Building on the policy themes set out in the Core Strategy, their purpose is to help maintain a high quality environment and to ensure development schemes help to make better places.

87.

Once developed these policies will be used to assess and determine planning applications and appeals. The NPPF makes it clear that *'only policies that provide a clear indication of how a decision maker should react to a development proposal should be included in the plan.'*

88.

The core and development management policies and the place specific policies are complementary so it is important that the policy framework is read as a whole. The core policies set out below do not replicate existing national policy.

SUSTAINABILITY PRINCIPLES

89. Central to national planning policy is the presumption in favour of sustainable development. The Council is committed to help achieve sustainable development and will give favourable consideration to proposals which will contribute towards delivering a strong, flexible and sustainable economy; the protection and enhancement of our natural, built and historic environment, the prudent use of natural resources and which mitigate and adapt to climate change; and which support strong, vibrant and healthy communities. This approach is embodied in Policy SD1 and is reflected in all policies in the Core Strategy and planning decisions made by the Council.

POLICY SD1: Presumption in favour of sustainable development

When considering development proposals the Council will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework. It will always work proactively with applicants jointly to find solutions which mean that proposals can be approved wherever possible, and to secure development that improves the economic, social and environmental conditions in the area.

Planning applications that accord with the policies in this Core Strategy (and, where relevant, with policies in neighbourhood plans) will be approved without delay, unless material considerations indicate otherwise.

Where there are no policies relevant to the application or relevant policies are out of date at the time of making the decision then the Council will grant permission unless material considerations indicate otherwise – taking into account whether:

- Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole; or
- Specific policies in that Framework indicate that development should be restricted.

RESPONDING TO CLIMATE CHANGE

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

World Commission on Environment and Development. Our common future 1987

Reducing the area's CO2 emissions

90.

Bath and North East Somerset's Sustainable Community Strategy (SCS) identifies climate change as the first of its six key themes. Climate change is also a cross cutting objective of the Core Strategy. In the context of national targets the SCS commits the Council to providing leadership for a reduction of the area's CO2 emissions by 45% by 2029 from 1990 levels.

91.

The CO2 reductions should be achieved by application of the following energy hierarchy:

- Reduce use of energy and use energy more efficiently
- Promote energy from renewable and low carbon sources

Retrofitting Existing Buildings

92.

Retrofitting involves incorporating measures in existing buildings to reduce the demand for energy and resources. For example by reducing the amount of heat lost through the roof, walls and windows and introducing technologies to generate renewable energy on site. Some measures are permitted development but others require planning permission, listed building or other consents. Policy CP1 sets out the approach to retrofitting for all existing buildings, including historic buildings. Historic buildings include those of solid wall or traditional construction.

93.

The UK has agreed to make an 80% carbon emission reduction by 2050 (based on 1990 levels). As 41% of Bath & North East Somerset's carbon emissions come from domestic properties and 34% from commercial premises (DEFRA, 2007) improving the energy efficiency of existing buildings is a priority particularly for those vulnerable households in, or at risk of, fuel poverty.

94.

The retrofitting of existing buildings could create local jobs in the low carbon economy, ensure our existing building stock remains affordable in terms of energy use and will also make a significant contribution to carbon emission reduction targets included within the Sustainable Community Strategy.

95.

Given the quality of the historic environment in the District and the high number of listed buildings, Conservation Areas and the World Heritage Site designation for Bath a SPD on sustainable construction and retrofitting is being prepared to provide guidance on sensitively retrofitting our historic building stock. Proposals for retrofitting historic buildings should also ensure that the integrity of European wildlife sites and species is not compromised.

POLICY CP1 Retrofitting existing buildings

Retrofitting measures to existing buildings to improve their energy efficiency and adaptability to climate change and the appropriate incorporation of micro-renewables will be encouraged.

Priority will be given to facilitating carbon reduction through retrofitting at whole street or neighbourhood scales to reduce costs, improve viability and support coordinated programmes of improvement.

Masterplanning and 'major development' (as defined in the Town & Country Planning (Development Management Procedure (England) Order 2010) in the District should demonstrate that opportunities for the retention and retrofitting of existing buildings within the site have been included within the scheme. All schemes should consider retrofitting opportunities as part of their design brief and measures to support this will be introduced.

Retrofitting Historic Buildings

The Council will seek to encourage and enable the sensitive retrofitting of energy efficiency measures and the appropriate use of micro-renewables in historic buildings (including listed buildings and buildings of solid wall or traditional construction) and in conservation areas, whilst safeguarding the special characteristics of these heritage assets for the future. Proposals will be considered against national planning policy.

The policy will be supported by the Council's Sustainable Construction and Retrofitting Supplementary Planning Document.

Delivery

1 Retrofitting will be encouraged through a range of mechanisms under the influence of the Council and its partners, including via Planning Services, information and advice services, community enabling and support projects and Housing Services

2 This policy will provide a basis for Development Management and will be supported by the Sustainable Construction and Retrofitting Supplementary Planning Document. The Sustainable Construction Checklist will be updated to include a section on sustainable refurbishment to raise awareness of the measures recommended in retrofitting existing buildings

3 Specific opportunities and principles that should be considered at the masterplanning stage will be identified in the Placemaking Plan and potentially in any future site specific SPD where existing buildings are present.

4 Signposting of retrofitting information including Government financial initiatives and schemes, public awareness and demonstration events will also be provided by the Council.

Sustainable Construction

96.

The EU UK Government has set a timetable target for tightening carbon standards in building regulations to achieve zero carbon residential buildings by 2016 and it is the intention for non-residential buildings to be zero carbon by Nearly Zero Energy Buildings by 2020 which member states must respond to 2019.

POLICY CP2 Sustainable construction

Sustainable design and construction will be integral to new development in Bath & North East Somerset. All planning applications should include evidence that the standards below will be addressed:

- Maximising energy efficiency and integrating the use of renewable and low-carbon energy (i.e. in the form of an energy strategy with reference to Policy CP4 as necessary);
- Minimisation of waste and maximising of recycling of any waste generated during construction and in operation;

- Conserving water resources and minimising vulnerability to flooding;
- Efficiency in materials use, including the type, life cycle and source of materials to be used;
- Flexibility and adaptability, allowing future modification of use or layout, facilitating future refurbishment and retrofitting;
- Consideration of climate change adaptation.

Applications for all development will need to be accompanied by a B&NES Sustainable Construction Checklist.

Delivery

1 This policy will provide a basis for Development Management.

2 The Sustainable Construction Checklist and Sustainability Statements will be used to assess the approach taken to sustainable construction in planning applications.

3 The Council will need to establish potential for flexible mechanisms such as “allowable solutions” for zero carbon development once the parameters are clarified, which will facilitate the use of the Community Energy Fund (or similar) and developer contributions.

Core Strategy Policy: Renewable Energy Targets

97. The UK Renewable Energy Strategy sets out to achieve 15% of energy to be generated from renewable sources by 2020, comprising 30% of electricity and 12% of heat. In 2007, the District's electricity supply from renewable sources was only approximately 0.06 MWe (Regen SW, 2010), which is less than 0.1%. By 2015, the District's electricity supply from renewable sources had risen to 12.82 MWe.

98. In order to assist identifying the potential for supply and demand for renewable and low carbon energy and the impacts this might have on environmental and heritage assets in Bath and North East Somerset, the Council commissioned 'Renewable Energy Research and Planning' (June 2009) and a Research Update (Nov 2010). This Renewable Energy Research is available as a snapshot to assist in considering possible proposals and may be updated by the Council as technologies develop.

99. Policy CP3 of the Core Strategy seeks to achieve an increase in the level of renewable energy generation in the District. These will be monitored and adjusted as technologies and initiatives improve. Whilst these targets are challenging, recent national commitments such as expansion of permitted development rights and financial incentives such as 'Feed in Tariff' and 'the Green Deal', should accelerate energy provision from renewable low carbon sources. These standards may be revised and updated through the Core Strategy review as sustainability methodologies, technologies and initiatives develop.

POLICY CP3 Renewable energy

Development should contribute to achieving the following minimum level of Renewable Electricity and Heat generation by 2029.

	Capacity (Megawatt)
Electricity	110MWe (Megawatt Electricity)
Heat	165MWth (Megawatt Thermal)

Proposals for low carbon and renewable energy infrastructure, including large-scale freestanding installations, will be assessed under the national policies and against the following:

- a** potential social and economic benefits including local job creation opportunities
- b** contribution to significant community benefits

- c** the need for secure and reliable energy generation capacity
- d** environmental impact (see Policy CP6)

Delivery

- 1** Renewable Energy schemes will be encouraged through a range of mechanisms under the influence of the Council and its partners, including via Planning Services, information and advice services, community enabling and support projects.
- 2** Delivery will be through the Development Management process. The Sustainable Construction Checklist and Design & Access Statements will be used to assess the approach taken to renewable energy in planning applications.
- 3** Also crucial to effective delivery will be working in partnership with key stakeholders such as local communities, businesses, Parish Councils and amenity groups.
- 4** Signposting of renewable energy information including public awareness events can also be provided on the website with links to relevant service areas.
- 5** The Council may establish "allowable solutions" for zero carbon development to facilitate the use of the Community Energy Fund and developer contributions once the parameters are clarified by national government.

Sustainable Construction & Renewable Energy

Context

100.

Climate change and environmental sustainability objectives are enshrined in the highest level of local policy, as follows:

- Core Strategy: Tackling climate change is the cross-cutting objective of the Core Strategy, and the Climate Change Core Policies CP1-4 set out a range of ways in which this will be delivered through spatial planning
- Health & Wellbeing Strategy: The Healthy & Sustainable Places theme outlines an approach to improving health and wellbeing through measures that also improve environmental sustainability
- Economic Strategy: Contains Sustainability as a cross-cutting objective and actions within the Sustainable, Connected Communities theme will facilitate the transition to a low carbon economy

- Council's Vision and Values: Sets the aim that the District will have "Unique places and beautiful surroundings...which are building for a greener/ low carbon future"
- The Environmental Sustainability & Climate Change Strategy: Sets the target of a 45% reduction in the area's CO2 emissions by 2026, in line with national climate change targets.

101.

Within the Placemaking Plan there is an opportunity to build on the planning policies contained within the Core Strategy (including policies CP1 on Retrofitting, CP2 Sustainable Construction, CP3 Renewable Energy and CP4 District Heating), to further support and promote sustainable construction and design and facilitate the delivery of renewable energy schemes in the district. The policy approach set out in the Placemaking Plan reflects evolving national policy.

102.

B&NES Council has an adopted *Sustainable Construction & Retrofitting Supplementary Planning Document and an Energy Efficiency & Renewable Energy Guidance for Listed Buildings and Undesignated Historic Buildings*, which provides detailed guidance – this guidance is aimed at householders and small scale developers.

103.

B&NES Council has also worked with Regen SW to prepare *Informal Guidance on renewables in the Green Belt* – the Placemaking Plan aims to reflect this position in policy.

Policy context

104.

The National Planning Guidance states that Local Planning Authorities may wish to establish policies which give positive weight to renewable and low carbon energy initiatives which have clear evidence of local community involvement and leadership.

105.

The Government's Community Energy Strategy also states that:

- Government wants to see all authorities showing leadership to help deliver community energy projects (para 76)
- Government urges all local authorities to fully explore partnership and investment opportunities for community energy in their local area (para 80)

106.

Following the publication of the Placemaking Plan options consultation, further changes were made to Government policy in relation to this area including the most significant of which are the Productivity Plan (which removed the 2016 zero carbon homes policy requirement, and the increasing standards within building regulations and the associated “allowable solutions” mechanism together with various renewable energy sector subsidies), and a Ministerial Statement (June 2015) in relation to on-shore wind, which requires all sites to be identified in either Local Plans or Neighbourhood Plans and to have the full backing of the community to be deemed acceptable in planning terms.

Policy aims

107.

The following Placemaking Plan policies aim to add to existing policies, and to specifically:

- Facilitate more sustainable construction to be employed in all new development Provide more detailed development management policies in relation to free standing solar developments
- Support community led renewable energy and low carbon development
- Introduce site specific renewable energy requirements for allocated sites – that are viable and feasible
- Reintroduce specific low cost sustainability requirements (previously contained within the Code for Sustainable Homes policy) specifically:
 - Cycle parking (now included within the Transport Policy section)
 - Water standards
 - Rainwater harvesting
- Introduce a new policy in relation to Sustainable Urban Drainage

On-site renewable energy requirement

108.

In order to support the delivery of Core Strategy Policy CP3, it is expected that major development will provide renewable energy on-site anticipated (regulated) energy use in buildings by at least 10%. Technical and viability evidence has been produced by the Council and Regen SW to support this policy and this can be found in the evidence base. Industrial land uses (Use Classes B2 and B8) are exempted on the basis of financial viability. In specific cases where viability issues are demonstrated, which compromise the ability to deliver this policy, the site specific viability case will need to be considered in line with national policy.

109.

This policy approach has already been successfully implemented (at 10% on-site renewables) for the Bath Western Riverside Development – achieved by a combination of biomass District Heating and solar PV. Furthermore, adjoining authorities already operate this policy approach successfully. The Energy Act (2008) continues to facilitate on-site renewable energy targets, provided that the technical potential and financial viability have been demonstrated to have been adequately considered and tested.

110.

Although the policy is technologically neutral, in that it does not specify which renewable energy generation technology should be used, it is anticipated that the policy would be met by the inclusion of solar PV or via connection to biomass district heating systems in almost all cases.

POLICY SCR1: On-Site Renewable Energy Requirement

On-site renewable energy requirement

Developers of major proposals above a threshold of 1,000 square metres or 10 dwellings, excluding Industrial B2 and B8 uses, will be required to provide sufficient renewable energy generation to reduce carbon emissions from anticipated (regulated) energy use in the building by at least 10%.

Supplements Core Strategy policy CP3 Renewable Energy.

Roof Mounted/ Building Integrated Scale Solar PV

111. In many cases roof mounted solar photovoltaic (PV) panels are now permitted development (the Council's permitted development checklist for retrofit provides further detail). However, where planning permission is required, solar arrays should be designed to complement the aesthetic of the host building. Consideration of character should inform design choices in line with Policy SCR2.

112. Designing solar arrays as a complementary part of a building can enable the PV arrays to complement the aesthetic of a building or development and need not compromise the character of protected areas such as the World Heritage Site and Conservation Areas. When designing building-mounted solar arrays, consideration should be aesthetics and character in design choices in line with the Policy SCR2.

113. Although the policy is technologically neutral, in that it does not specify which renewable energy generation technology should be used, it is anticipated that the policy would be met by the inclusion of solar PV or via connection to the biomass district heating system in almost all cases.

POLICY SCR2: Roof mounted/ building integrated scale solar pv

1 Where planning permission is required for roof mounted/building integrated solar PV, the following matters should be addressed:

- a** The use of monochrome, non-reflective photovoltaic materials to complement the existing roof material
- b** The facilitation of a regular, rhythmic pattern for multiple arrays wherever possible

In all development, particularly new build dwellings which incorporate solar energy, the photovoltaic materials should be considered as part of the overall scheme design.

Ground Mounted Solar Arrays

113. Ground mounted solar arrays (also known as solar farms/solar fields) can make a significant contribution to our renewable energy target in Core Policy CP3.

114. Given the rural nature of the district, and the opportunities for ground mounted solar arrays as part of the renewable energy mix, it is anticipated that Ground Mounted Solar Arrays to be sited on land of lower agricultural quality will continue to contribute significantly towards the district wide renewable energy target in CP3, and to facilitate Green Infrastructure and biodiversity gains this policy is considered necessary (e.g. provisions for wildlife and inclusion of permissive paths).

115. In simple terms, a 1MW ground mounted solar array can produce the same amount of power as 500 2KW domestic arrays.

116. In addition, ground-mounted solar arrays can provide benefits to biodiversity and soils by providing an undisturbed area that can host a rich variety of species and rest core soil nutrients. Solar arrays can also retain agricultural uses such as sheep grazing, and can support rural businesses and the rural economy.

117. Where ground mounted arrays are proposed in the Green Belt, reference will also need to be made to relevant Green Belt policies.

118. Ground mounted solar arrays will be assessed for compliance with the criteria summarised in the policy below and set out in detail in the BRE National Solar Centre “Biodiversity Guidance for Solar Developments”¹ and the Solar Trade Associations 10 best practice commitments (2014), and successor guidance.

POLICY SCR3: Ground Mounted Solar Arrays

In addition to the policy considerations of CP3, Planning applications for ground mounted solar arrays which follow best practice (e.g. BRE National Solar Centre guidance and the Solar Trade Association best practice commitments, or successor guidance), should achieve as many of the following factors as possible:

a Proposals are focused on non-agricultural land or land of lower agricultural quality

b Proposals are sensitive to nationally and locally protected landscapes and nature conservation areas, and take opportunities to enhance the ecological value of the land. To this end, the application should be supported by a Biodiversity Management Plan, which reflects the BRE National Solar Centre “Biodiversity Guidance for Solar Developments” (or successor guidance)

c Proposals seek to minimise visual impact where possible and maintain appropriate screening throughout the lifetime of the project (managed through a land management and/or ecology plan)

d Engagement at a pre-application stage with the community takes place

e Proposals are supportive of land diversification and continued agricultural use, biodiversity measures and supporting the provision of multi-functional Green Infrastructure e.g. permissive paths and wildlife corridors

f Proposals are used as an educational opportunity where appropriate

g Land is returned to its former use at the end of a project

Supplements Core Strategy policy CP3 Renewable Energy.

¹: <http://www.bre.co.uk/nsc/page.jsp?id=3202>

Community Led Renewable Energy & Community Involvement

119.

Policy SCR4 aims to support the delivery of community renewable energy schemes and the broader community involvement that they bring. This is in line with the approach set out in the Department of Energy & Climate Change's Community Energy Strategy, which states that

*"Putting communities in control of the energy they use can have wider benefits such as building stronger communities, creating local jobs, improving health and supporting local economic growth"*²

POLICY SCR4: Community Renewable Energy Schemes

1 The positive benefits of community energy schemes will be a material consideration in assessing renewable energy development proposals.

2 The preference is for schemes that are led by and directly meet the needs of local communities, in line with the hierarchy and project attributes below:

Community Led Energy:

a Project part or fully owned by a local community group or social enterprise

b Local community members have a governance stake in the project or organisation e.g. with voting rights

3 In the case of renewable energy proposals within the Green Belt, where community benefits are proposed to meet the "very special circumstances" test, the following criteria will be considered:

a The contribution to achieving the targets set out in Policy CP3 of the Core Strategy to increase the level of renewable electricity and heat generation in the district;

b The contribution that will be made to local and national renewable energy and carbon reduction targets;

c Social and economic benefits. For example, local job creation opportunities; raising the quality of life in rural areas through diversification of agricultural land and generating an alternative income for farmers;

d The temporary nature of the renewable energy development and the ability to restore land to its original condition at the end of the project's life;

e Contributions to improving the biodiversity, public amenity and soils in the vicinity of the scheme.

Supplements Core Strategy policy CP3 Renewable energy.

Water Efficiency

120.

Core Strategy policy CP2, when it included a requirement for Code for Sustainable homes levels, incorporated mandatory water efficiency standards. While the Council can no longer require that a specific Code level is met, the government has maintained the ability to set a water efficiency requirement for new residential properties. This element was specifically supported by the Environment Agency in their responses to previous consultations.

121.

The guidelines for this “optional technical standard” on water efficiency are included in the National Planning Guidance (paras 013-017). Where local authorities can demonstrate a clear local need a tighter Building Regulations optional requirement of 110 litres/person/day can be required in a Local Plan policy (this compares to the Building Regulations requirement of 125 litres/person/day). This requirement is based on support from the Environment Agency (much of B&NES falls into areas with moderate water stress as defined by the Environment Agency). Local water and sewerage companies (Wessex and Bristol Water) have also provided support to this policy approach. Consideration has also been given to the viability of this proposal².

122.

The climate in Bath and North East Somerset is changing. By 2020, UK Climate Projections (2009) indicates that:

- Summers in our area could be up to 2.8 degrees C warmer and summer rainfall could decline by 25%.
- Winter precipitation could increase by up to 16% and be more intense.

123.

Both of these trends will put more pressure on water supplies. Reducing water demand in new dwellings will help mitigate this.

POLICY SCR5: Water Efficiency

a All dwellings will be expected to meet the national optional Building Regulations requirement for water efficiency of 110 litres per person per day;

b Rainwater harvesting or other methods of capturing rainwater for use by the residents (e.g. water butts) will be required for all residential development, where technically feasible.

²: Cost figures from Element Energy & Davis Langdon (2011) Measures to reduce water consumption are low cost, estimated at around £250 per dwelling to meet the Optional Standard on Water Efficiency.

District Heating

124.

District heating schemes deliver heating and hot water to multiple buildings from a local plant. A heat network of insulated pipes buried underground is required to distribute the heat generated; these can often be installed at the same time as the other services when a site is being developed and can also be retrofitted to existing buildings.

125.

District heating can be combined with electricity production in combined heat and power (CHP) or in combined cooling, heat and power (CCHP). This is an efficient form of decentralised energy supply providing heat and electricity at the same time. Currently the overall fuel efficiency of CHP was around 70-90% of the fuel input, depending on heat load; much better than most power stations which are only around 40-50% efficient.

126.

It is possible to vary the energy source to fuel district heating depending on cost and availability so the energy source can be changed over time; potential fuel sources include conventional fuels, biomass, and waste and other renewables. The West of England Joint Waste Core Strategy provides a policy framework for energy recovery from waste.

127.

The B&NES Renewable Energy Research and Planning (June 2009) and a Research Update (Nov 2010) assessed the potential for CHP in the District (utilising biomass and energy from waste). Biomass CHP is identified as a key contributor towards meeting the electricity and heat demand from development. The Council's District Heat Feasibility Study (2010) has provided more detailed local evidence to support this policy approach. In the District heat priority areas shown in Diagram 19 and identified through the Heat Feasibility Study development will be expected to incorporate and connect to district heating infrastructure.

128.

District Heating (including CHP/CCHP) is currently one of the most low cost ways to meet zero carbon, particularly on brownfield sites where the efficiency/appropriateness of other technologies may be constrained.

129.

Consideration of issues such as below ground archaeology and vaults particularly within central Bath have been a key consideration in considering this approach and in the research undertaken and the implementation of District Heating would need to mitigate any negative impacts. Any impact of this policy on the viability of schemes will be given careful consideration.

POLICY CP4 District heating

The use of combined heat and power (CHP), and/or combined cooling, heat and power (CCHP) and district heating will be encouraged. Within the three identified “district heating priority areas”, shown indicated on Diagram 19 (Bath Central, Bath Riverside and Keynsham High Street), and shown in detail in the associated evidence base, and development will be expected to incorporate infrastructure for district heating, and will be expected to connect to existing systems where and when this is available, unless demonstrated that this would render development unviable.

Within the remaining 12 “district heating opportunity areas” shown on Diagram 19, (Radstock, Midsomer Norton, Paulton, Bath Spa University, Twerton, Kingsway, Bathwick, Moorfields, Odd Down, Lansdown, RUH & Keynsham Somerdale), development will be encouraged to incorporate infrastructure for district heating, and will be expected to connect to any existing suitable systems (including systems that will be in place at the time of construction), unless it is demonstrated that this would render development unviable.

Masterplanning and major development in the District should demonstrate a thermal masterplanning approach considering efficiency/opportunity issues such as mix of uses, anchor loads, density and heat load profiles to maximise opportunities for the use of district heating.

Where a district heating scheme is proposed as part of a major development the Council will expect the scheme to demonstrate that the proposed heating and cooling systems (CHP/CCHP) have been selected considering the heat hierarchy in line with the following order of preference:

- 1 Connection with existing CHP/CCHP distribution networks
- 2 Site wide CHP/CCHP fed by renewables
- 3 Communal CHP/CCHP fuelled by renewable energy sources
- 4 Gas fired CHP/CCHP

Delivery

- 1 This policy will provide a basis for Development Management to support the principle of CHP, CCHP and District Heating included in planning applications
- 2 Planning Applications within the DHPAs will need to demonstrate how they are incorporating district heating and to justify any alternative approach.
- 3 Planning Obligations or a Community Infrastructure Levy (CIL) may be able to be used to contribute towards the delivery of the delivery of strategic district heating infrastructure.
- 4 Further opportunities for interventions that will increase commercial viability of district heating are identified in the B&NES District Heating Feasibility Study and will include actions that the Council and the Private Sector can initiate.

DIAGRAM 19 DISTRICT HEATING PRIORITY AREAS

(see Annex 1, p183-183)

130.

Policy CP4 applies to allocated sites within the “Bath Central”, “Bath Riverside” and “Keynsham High Street”; the “district heating priority areas” as shown in Diagram 5 and in more detail in the OS base maps within District Heating Opportunity Assessment Study- Part 5 (AECOM, 2010). The site allocations within Bath and Keynsham to which this policy applies include:

Bath:

- Walcot Street/Cattlemarket site
- Central Riverside & Recreation Ground
- Manvers Street
- North Quays
- South Quays & Riverside Court
- South Bank
- Green Park Station West & Sydenham Park
- Bath Riverside Core Area
- Bath Riverside North Bank
- Bath Press
- Roseberry Place

Keynsham:

- Town Centre
- Riverside & Fire Station Site

131.

A District Heating energy centre (utilising both gas and biomass) is now operational at Bath Western Riverside (operated by the energy services company EON and owned by Crest Nicholson) and has scope for additional capacity to serve nearby sites, subject to negotiation. In many cases District Heating can be used to deliver the on-site renewables requirements proposed in the Placemaking Plan.

132.

In 2014 and 2015, B&NES Council was awarded significant funding from the DECC Heat Network Delivery Unit to undertake further detailed technical work to support the delivery of the District Heating network to serve the Bath Enterprise Area and Keynsham Town Centre. For more information see the B&NES Council's District Heating webpage, and the Placemaking Plan evidence base.

Flood Risk Management

133.

The dominant flood risk affecting the District is flooding from Main Principal Rivers. The principal rivers being the Lower Avon, River Chew, Cam Brook and Wellow Brook. The District also contains areas that are prone to flooding from a range of other local sources including, ordinary watercourses, surface water, and groundwater, as well as risks from artificial sources such as sewers, canals and reservoirs. Climate change impacts may increase the severity and frequency of storms and therefore contribute to more frequent flooding throughout the District in the future.

134.

NPPF requires that new development is located in sustainable locations, at the least risk of flooding, taking into account vulnerability to flooding. Appropriate mitigation should be provided where necessary to ensure that development remains safe, resilient to the impacts of flooding, and does not increase flooding elsewhere.

135.

The NPPF and its associated Technical Guidance provides the national requirements in terms of the Sequential and Exception Test, the need for planning applications to be supported by a Flood Risk Assessment, and the priority given to utilising sustainable drainage techniques in new development. The Council has published Strategic Flood Risk Assessments (SFRAs), providing detailed information on all sources of flooding across the District. Furthermore a subsequent Flood Risk Management Strategy (FRMS June 2010) tested various flood risk management options for the District and provided recommendations in terms of both on-site and strategic flood risk management solutions. The FRMS will be reviewed as new evidence become available. The requirements and guidance offered in these documents should be followed applying flood risk policy principles, deciding on appropriate mitigation, and managing surface water by applicants when considering new development across the District.

136.

The Core Strategy sets out the broad locations for new housing, employment and other strategic development in Bath, Keynsham, Midsomer Norton and Radstock (Policies B1, B2, B3, B3A, B3C, B4, KE1, KE2, KE3A, KE4, SV1, SV2, SV3, and RA5). In some instances, development in flood risk areas has been unavoidable.

137.

The Flood Risk Management Strategy (June 2010) has identified and assessed a range of flood risk management options to enable development in vulnerable areas without increasing the flood risk elsewhere. The Strategy has concluded that there is no strategic solution to reducing peak flow through Bath which is either technically or economically viable. Following the Flood Risk Management Strategy, the Hydraulic Modelling (Bath Flood Risk Management Project Feb 2013 by Black & Veatch) was prepared. The impact of raising the key development sites in the Central Area and the Enterprise Area in Bath is a loss of conveyance, rather than a loss of flood storage. It recommends, where necessary, to raise all the development sites and the access/egress routes (or raise defence walls) and implement conveyance mitigation measures. New development should be safe and not increase risk elsewhere.

138.

A sequential risk based approach was taken to formulate these policies and the high level Sequential / Exception Test report was prepared and agreed in partnership with the Environment Agency. However, flood risk should be taken into account at all stages in the planning process and the sequential approach should still be taken within these policy areas to minimise risk by directing the most vulnerable development to areas of lowest flood risk, matching vulnerability of land use to flood risk at a site level. (Table 1 Flood zones and 2 Flood Risk Vulnerability Classification of the Technical Guidance to the NPPF). Therefore site specific Sequential/ Exception Test reports should be undertaken when determining future site allocations in the Placemaking Plan or a planning application where necessary.

139.

New developments can also increase pressure on sewer systems and urban drainage. It is therefore important to manage the impact of developments in a sustainable manner. The NPPF and its associated Technical Guidance provides an opportunity for all those with responsibility for the drainage of new development to contribute to managing flood risk, improving amenity and biodiversity, and improving water quality. As a minimum the negative impacts of development on surface water runoff should be mitigated.

140.

In addition to the concerns over flood risk, there is increasing pressure for efficient and sustainable use of water resources. This can be helped by incorporating Sustainable Urban Drainage Systems (SuDS) and grey water reuse systems into new developments (as per the NPPF and the Building Regulations, Part H).

141.

SuDS aim to control surface water runoff as close to its origin as possible, before it is discharged to a watercourse or sewer. This involves moving away from traditional piped drainage systems towards softer engineering solutions seek aiming to mimic natural drainage regimes. SDS have many benefits such as reducing flood risk, improving water quality, encouraging groundwater recharge and providing amenity and wildlife benefits.

142.

Under the Flood and Water Management Act 2010 the Council is established as a Lead Local Flood Authority and is currently developing Local Flood Risk Management Strategy. The Council will also be established as the SuDS Approving Body (SAB) with responsibility for the approval, adoption and maintenance of SDS systems. In order to be approved, the proposed drainage system will have to be designed and constructed in accordance with the new national standards for sustainable drainage and WoE Regional and local guidance. Where both planning permission and SDS approval are required, the application processes will run in parallel. No construction works can start on site until drainage approval is granted by SAB.

POLICY CP5 Flood Risk Management

Development in the District will follow a sequential approach to flood risk management, avoiding inappropriate development in areas at risk of flooding and directing development away from areas at highest risk in line with Government policy NPPF). Any development in areas at risk of flooding will be expected to be made safe throughout its lifetime, by incorporating mitigation measures, which may take the form of on-site flood defence works and / or a contribution towards or a commitment to undertake such off-site measures as may be necessary. All development will be expected to incorporate sustainable drainage systems to reduce surface water run-off and minimise its contribution to flood risks elsewhere. All development should be informed by the information and recommendations of the B&NES Strategic Flood Risk Assessments and Flood Risk Management Strategy.

Delivery

Delivery will be through the Development Management process. Also crucial to effective delivery will be working in partnership with key stakeholders such as the Environment Agency.

Sustainable Drainage Systems (SuDS)

Context

143. SuDS, or Sustainable Drainage Systems, are a sequence of water management practices designed to drain surface water in a more sustainable way than the traditional practice of draining sites via underground pipes directly to watercourses or sewers.

144. SuDS are a more natural approach to managing drainage, they work by keeping water on the surface where it is slowed down and held back to allow natural losses through infiltration and evaporation. At the same time natural processes break down pollutants leading to an improvement in the quality of the discharge. Good quality SuDS can also create new habitats leading to an increase in the biodiversity of the area. SuDS features can also enhance the public realm space and provide recreational facilities.

145. The sequence of SuDS management practices is known as the “management train” which includes four key steps:

1 Prevention. Reduce runoff and pollution through good site design and housekeeping measures for example by minimizing impermeable surfaces and sweeping to remove surface dust from car parks.

2 Source Control. Manage runoff as close to source as possible through techniques such as rainwater harvesting, soakaways, permeable paving etc.

3 Site Control. Management of runoff in a local area or site using swales, large soakaways, detention basins etc.

4 Regional Control. Management of runoff from a site or several sites using features such as balancing ponds and wetlands.

146. SuDS can be designed to incorporate natural features such as ditches or ponds and can form an integral part of both hard and soft landscaped areas contributing to Green Infrastructure (GI) networks. SuDS can help meet the growing demands to deliver GI by creating green open spaces which encourage biodiversity and habitats. Using SuDS in the context of blue/green infrastructure offers opportunities to create attractive vegetated open space and blue corridors for water above ground.

147. For more information on SuDS including the management train and the various components please refer to the *SuDS Manual* (CIRIA Publication C753), *Planning for SuDS – making it happen* (CIRIA Publication C687) and the *West of England Sustainable Drainage Developer Guide*, or successor guidance. Information on the philosophy of controlling storm water runoff (in terms of rate and volume) can be found in *Rainfall runoff management for developments* (Environment agency Report – SC030219).

Policy context

148. The NPPF states that Local Authorities should:

- Support Local Plans with a Strategic Flood Risk Assessment and develop policies that manage flood risk from all sources i.e. including surface water (para 100)
- Use opportunities offered from new development to reduce the causes and impacts of flooding (para 100)
- On specific sites, local authorities should require developers to produce “site specific flood risk assessments” and ensure that development is appropriately flood resistant and resilient, and that residual risk can be safely managed including giving priority to sustainable drainage systems (para 103)
- When planning for sustainable drainage systems biodiversity gains should be planned for, pollution should be minimised and green infrastructure should be planned for positively (section 11)

149.

The *Flood and Water Management Act* (2010) requires a new approach to drainage to include an integrated approach to SuDS. The National Planning Guidance confirms that SuDS will be implemented via the planning system and confirms in para 079 that “for major development sustainable drainage systems should be provided unless demonstrated to be inappropriate”.

150.

The B&NES Core Strategy sets the context for a more detailed SuDS policy in the Placemaking Plan, in particular flood risk management (CP5) and the green infrastructure policy (CP7). It requires that all sites are expected to incorporate sustainable drainage systems to reduce surface water runoff and minimise its contribution to flooding.

151.

In addition, there are site specific requirements for the Core Strategy strategic site allocations and for the site allocations proposed within this Placemaking Plan.

152.

The emerging SuDS policy approach draws on information from the Council’s **Local Flood Risk Management Strategy** and the **Surface Water Management Plan**. The policy approach and the evidence behind the site allocations in the Placemaking Plan, supersedes the principles outlined in the **B&NES Strategic Flood Risk Assessment** (2008-9) related to Sustainable Drainage Systems. It should be used together with the latest Environment Agency flood risk mapping and local flood risk standing advice.

153.

The West of England Sustainable Drainage Developer Guide is primarily intended for use by developers, planners, designers and consultants who are seeking guidance on the requirements for the design, approval and adoption of SuDS in the West of England and Somerset. It provides information on the planning, design and delivery of attractive, high quality and well-integrated SuDS schemes and should offer multiple benefits to the environment and community alike. It provides supplementary information and should be read alongside this Placemaking Plan policy.

154.

The aim is to show that these requirements can be successfully achieved with added value and positive environmental and community benefits. The guidance promotes the need for early consideration of SuDS and introduces the use of a “proof of concept” process to gain agreement in principle at an early stage from the approving authority/s.

Site Specific SuDs

155.

Site specific drainage assessments, considering SuDS opportunities, have been undertaken for all allocated sites, and this information can be found in the Placemaking Plan evidence base.

Policy Aims

156.

The aims of this policy are to:

- Set out the high level principles for drainage designs incorporating SuDS features and the SuDS hierarchy that will be used in B&NES
- To provide a basis for the incorporation of SuDS in development schemes through the planning system, ensuring that SuDS features are considered at an early stage and incorporated into a scheme design
- To identify key considerations and requirements for developers which should be addressed via development management

SU1 - Sustainable Drainage Policy

Sustainable Urban Drainage Systems (SuDS) are to be employed for the management of runoff from both major development (as defined by the Town and Country Planning (Development Management Procedure) (England) Order 2015) and for minor development in an area at risk of flooding (from any source up to and including the 1 in 100year+ climate change event).

SuDS are to comply with the “Non-statutory technical standards for sustainable drainage systems” published by the Department for Environment, Food and Rural Affairs (DEFRA) and the standards/requirements contained in the West of England Sustainable Drainage Developer Guide (2015), or successor guidance.

When making a planning application where SuDS are to be employed, applicants are required to follow the guidance within the “West of England Sustainable Drainage Developers Guide” (2015), or successor guidance, particularly in giving early consideration to SuDS, and it is recommended that a SuDS Proof of Concept is submitted for agreement by the Local Planning Authority at the pre-application stage. Outline applications must be supported by a “SuDS Proof of concept” and full applications must contain a “Sustainable Drainage Strategy” in line with an agreed SuDS Proof of Concept for approval by the Local Planning Authority.

If SuDS are demonstrated to be inappropriate, an alternative means of effectively managing the surface water without increasing flood risk (either onsite or offsite) is to be agreed with the Local Planning Authority. As a minimum the SuDS standards (set out in DEFRA’s Non Statutory Technical Standards for sustainable drainage systems and the West of England Sustainable Drainage Developers Guide, or successor documents) relating to the drainage hierarchy, flood risk outside the development, peak flow control and flood risk within the development are to be complied with (using the appropriate climate change allowances).

An aerial photograph showing a rolling green landscape. In the foreground, there is a large, classical-style building with many columns. Behind it, a town with several houses is visible. The background consists of rolling hills under a clear blue sky.

ENVIRONMENTAL QUALITY

The distinctive landscape of the Bath & North East Somerset area is “intrinsically linked to its economic prosperity, societal wellbeing and is host to a wealth of important wildlife.”

Avon Wildlife Trust

157. B&NES' high quality environment is fundamental to its local distinctiveness. It is a key contributor to the quality of life of residents, attracting visitors, businesses and inward investment, contributing to the prosperity of the area in terms of tourism and delivering a wide range of tangible and intangible benefits to people including health and general well-being.

High Quality Design

158. High quality design is fundamental to the creation of high quality places by both enhancing appearance and functionality. It is the means by which corporate priorities such as an improved public realm and better quality housing can be delivered. Government guidance in the NPPF, as well as best practice including the Manual for Streets, By Design, the Lifetime Homes Standard and CABE's Building for Life 12 (BfL12) programme provide guidance on the approaches to be taken as well as providing advice on the assessment of schemes.

159. High quality design (including architecture, urban design and landscape architecture), has a significant impact on quality of life. It influences safety and security, encourages economic investment as well as fostering community cohesion and inclusion. It can encourage greater levels of walking and cycling to address health and wellbeing, as well as addressing the causes and effects of our changing climate.

160. High quality design is crucial if the settlements throughout the District are to maintain and enhance their valued local distinctiveness, and emerge as more sustainable and higher quality environments that thrive economically, socially and culturally. The Council will support contemporary and innovative responses to local distinctiveness, ensuring that new development reinforces a sense a place. This priority will be achieved by ensuring that existing assets such as buildings, streets and spaces, green infrastructure, and community facilities are managed imaginatively and that new developments are designed intelligently.

161. All development schemes with a residential component will be assessed using the Building for Life 12 methodology (or equivalent, as identified by the Council, should these be superseded within the strategy period).

162. The Place based sections of the Core Strategy have each highlighted Placemaking Principles that are relevant to their specific locations. These provide the fundamentals of design policy in these areas that will then be developed into more detail in the Placemaking Plan.

Historic Environment

163. Bath & North East Somerset's outstanding historic built, cultural, landscape and archaeological heritage assets and their settings are well documented and will continue to be preserved or enhanced.

164. Our heritage assets are central to local distinctiveness and sense of place. As well as ensuring our historic environment is understood, sensitively managed and promoted in its own right, our heritage assets should be used as an integral part of regeneration wherever possible, and used to expect the highest standards of new design and architecture.

165. Proposals for the reuse of redundant and underused historic buildings and areas will be encouraged where the proposed use does not compromise or threaten the historic asset or the integrity of a European wildlife site and species. Bath stone and other local traditional building materials should be used either on site or reused elsewhere in favour of newly won mineral products.

166. The Core Strategy seeks to enable the appropriate modification of heritage assets, including the World Heritage Site in order to reduce carbon emissions. The Energy efficiency and Renewable Energy Guidance for Listed Buildings and Undesignated Historic Buildings (September 2013) identifies the opportunities for heritage assets to mitigate, and adapt to, the effects of climate change. These include enhancing energy efficiency and allowing greater use of renewable energy. This will give applicants clear guidance on the acceptability of a range of potential modifications, the guidance having weighed the benefit of a number of modifications to mitigating the effects of climate change against any harm to the significance of heritage assets.

167. National policies in the NPPF complemented by Core Strategy Policy CP6 together with more detailed saved policies in the Local Plan will provide the context for considering development proposals until reviewed through the Placemaking Plan.

168. The Council will continue to keep under review conservation areas in the District and where appropriate, designate new areas. Appraisals of conservation areas will define the boundaries and analyse the special architectural and historic interest of the area. In highlighting the key features that both contribute to or detract from the character of the conservation areas, they provide a framework for considering development proposals.

Landscape

169. Landscape policy in Bath & North East Somerset will seek to follow principles contained in the European Landscape Convention (ELC) which came into effect in the UK in March 2007. This includes the protection, management and planning of landscapes. The ELC defines landscape as 'An area, as perceived by people, whose character is the result of the action and interaction of natural and/or human factors'.

170. Bath & North East Somerset has a rich and diverse range of landscapes which are described in 'Rural Landscapes of Bath & North East Somerset: A Landscape Character Assessment' and the 'Bath Citywide Character Appraisal'.

171. Some landscapes in the District, like the Cotswolds and Mendip Hills, are recognised as being of national importance and are granted the status of Areas of Outstanding Natural Beauty (AONB). Bath is a World Heritage Site and there are a number of Historic Parks and Gardens within the District. Others, though they lack this status and protection, are no less important to their local communities. Each landscape is closely related to the evolution of agriculture, communications, industry and settlement. Although some landscapes are defined by physical appearance and activities occurring within them, others are valued for their levels of tranquillity. All are living working landscapes and as such they change and develop according to the demands placed upon them. Some of the more pressing demands are meeting the need for locally produced food and renewable energy in order to help respond to our changing climate.

172. Landscape is important for cultural, ecological, environmental and social reasons. It allows for local food production, climate change mitigation and adaptation and supports the economy and opportunities for tourism and recreation. The policy seeks to conserve or enhance landscape character including opportunities to reinforce distinctiveness.

Nature Conservation

173. Bath & North East Somerset benefits from a rich diversity of natural habitats and features including many internationally, nationally and locally protected sites. These range from ancient woodlands, veteran and notable trees, hedgerows, to flower-rich grasslands and important bat foraging corridors.

174. The requirements and practice of site and species protection is now well established and is clearly defined by existing legislation and by both national and local policy (B&NES Local Plan). Development proposals will be required to assess potential impacts on protected sites and species and the adequacy of proposed mitigation measures, and where they potentially impact on European protected species especially rigorous examination is required. However, there is increasing recognition of the need to move beyond individual site and species protection in order to adequately protect and sustain the natural environment and to achieve national and international biodiversity targets.

175. Many sites and valued habitats are limited in size and are often isolated from each other. This can compromise their wildlife value, and their benefit to people, particularly in the face of climate change.

176. There is a need to create a coherent network of more robust and resilient natural habitats, including bigger protected sites and both a greater extent and greater connectivity of natural habitats (Lawton 2010). The Lawton report specifies a “need to embrace a new, restorative approach which rebuilds nature and creates a more resilient natural environment for the benefit of wildlife and ourselves”.

177. The Council also recognises the importance of maintaining, restoring and re-creating priority habitats within the Strategic Nature Areas identified on the South West Nature Map.

178. The Core Strategy therefore provides additional nature conservation policy to address these issues and to complement national policy and existing development management policies set out in the Local Plan which will be reviewed through the Placemaking Plan.

179. Policy CP6 seeks to ensure Bath & North East Somerset’s environmental quality is fostered both for existing and future generations.

POLICY CP6 Environmental Quality

1. High Quality Design

The distinctive quality, character and diversity of Bath and North East Somerset's environmental assets will be promoted, protected, conserved or enhanced through:

a high quality and inclusive design of schemes, including transport infrastructure, which reinforces and contributes to its specific local context, creating attractive, inspiring and safe place.

b assessing all major development schemes with a residential component using the Building for Life 12 design assessment tool (or equivalent methodology). As a guide development should seek to achieve a score of no 'reds', design out all 'ambers' and achieve a majority of 'greens'. A Building for Life 12 Assessment should be included within the Design and Access Statement.

2. Historic Environment

The sensitive management of Bath & North East Somerset's outstanding cultural and historic environment is a key component in the delivery of sustainable development. The Council will protect, conserve and seek opportunities to enhance the historic environment including the character and setting of designated and other heritage assets.

The sensitive reuse and adaptation of historic buildings and spaces will be supported, and in areas where regeneration is required the imaginative integration of new development with the historic environment will be promoted.

Where development has a demonstrable public benefit, including mitigating and adapting to climate change, this benefit will be weighed against any harm to the significance of the heritage asset.

The Council will continue to develop strategies and guidance which ensure the historic environment and its significance is understood, recorded, promoted and enjoyed, and is sensitively and proactively managed, including those heritage assets most under threat. A positive and proactive conservation strategy will be promoted through the Placemaking Plan.

3. Landscape

The distinctive character and quality of Bath and North East Somerset's landscapes will be conserved or enhanced.

4. Nature Conservation

The quality, extent and robustness of protected sites and valued habitats will be enhanced, and networks of valued habitat will be restored or created, by measures which:

a Improve the quality and/or increase the size of current sites and valued habitat.

b Enhance connections between, or join up, sites and valued habitats.

c Create new sites and valued habitats.

d Reduce the pressures on wildlife by improving the wider environment.

New Development will protect and enhance international, national and local sites and existing networks of valued habitats; facilitate migration and dispersal through the natural and built environment; and seek to reduce fragmentation of existing habitats.

The Council will promote the management, conservation, enhancement or restoration of environmental assets. Sustainable opportunities for improved access to and enjoyment of these assets will be promoted where it does not compromise the integrity of the asset.

Delivery:

High Quality Design

Delivery will be principally through the Development Management process. This will include working in partnership with property owners, landlords and agents, tenants and occupiers, Parish Councils, Residents, amenity groups and through awareness raising events, community forum for ideas to improve their neighbourhoods and the facilitation of neighbourhood scale projects such as whole street public realm refurbishment. The Council is committed to the comprehensive integration of its strategies and programmes, partnership working and effective community involvement. Pre-application planning discussions and review of Building for Life assessments can be facilitated through the development management process, as they are currently. Also important will be the implementation of the Placemaking Plan that will provide detail for specific site allocations, development management policies and local designations.

Historic Environment

Delivery will be through the Development Management process and conservation area appraisals and other supplementary planning documents and guidance will be prepared and used to guide decisions on development proposals that affect the historic environment. Working in partnership with bodies such as English Heritage, Mendip Hills and Cotswolds AONB Services and local groups; and with conservation, archaeology and landscape experts will also be necessary to ensure effective delivery of the policy. The preparation of management plans and other positive and proactive strategies will be developed to support policy delivery. The strategy for the historic environment will include:

- maintaining and applying an up-to-date and available Historic Environment Record and evidence base
- producing and promoting guidance that will encourage good practice such as the World Heritage Site Setting SPD, Retrofitting & Sustainable Construction SPD and Bath Building Heights Strategy
- working with partners to resolve long standing high profile heritage assets at risk (including The Wansdyke and Cleveland Pool in Bath)

- reducing the volume of traffic using historic streets and spaces (see para 6.103) by implementing the Bath Public Realm and Movement Strategy
- seeking to ensure that conservation area appraisals and management plans are kept up-to-date
- implementing the World Heritage Site Management Plan
- ensure the Bath Urban Archaeological Assessment is used to inform management strategies and SPDs
- conserving significance of heritage features via the Green Infrastructure Strategy
- consideration of the preparation of a 'local list' to ensure non-designated assets are sustained and conserved
- consideration of use of Article 4 Directions as one measure for resolving conservation issues when appropriate
- Seek contributions from development, where appropriate, to support the delivery of the above.

Landscape

Delivery will be principally through the Development Management process. Working in partnership with bodies such as Natural England, English Heritage, Mendip Hills and Cotswold AONB Services, and with conservation, archaeology and landscape experts and the community will also be necessary to ensure effective delivery of the policy. The preparation of landscape management plans, action plans and other strategies will be encouraged to support policy delivery.

Nature Conservation

Delivery will be principally through the Development Management process. This will include working through partnership initiatives and in close liaison with bodies such as Natural England and ecology experts through which opportunities for enhancement and restoration of ecological and geological assets can be maximised. The Green Infrastructure Strategy will have an important role in the delivery of biodiversity restoration targets for the Strategic Nature Areas within the District.

HIGH QUALITY DESIGN

“Design-led innovation can stimulate business growth, transform public services and enhance places and cities”

Design Council, UK

Introduction

180. Urban Design is the process of shaping the physical setting for life in cities, towns and villages and involves the design of buildings, groups of buildings, spaces and landscapes. Good quality design is integral to sustainable development, ensuring that it meets long term aims and is in the wider public interest – going beyond the needs of a single user or a single building. Urban Design is indivisible from good planning and should make places safer, healthier and more enjoyable for people.

181. The process of good urban design includes:

- analysing and understanding the current and future form and function of places
- early engagement with stakeholders and the wider community
- collaboration e.g. highways, drainage or landscape schemes should enhance the overall design and layout of development and relate well to the built form
- applying sound design principles to buildings and the spaces between them, ensuring that spaces are safe and inclusive and that public/private realm is clearly delineated

182. The design policies are to be used as part of the development management process, and to guide the future development of Design Briefs, Masterplans and Design Guides and Codes. Further guidance is also provided in the area based chapters and within site specific development principles.

Context

183. The NPPF supports the principles of good design; it specifies that Local Planning Authorities should:

- Create a high quality built environment (para 7)
- Secure high quality design and a good standard of amenity (para 17)
- Promote mixed use development (para 17)
- Take account of the roles and characters of different areas (para 17)
- Plan positively for high quality and inclusive design, including individual buildings, public and private spaces and the wider area (para 57)

184. Specifically, Local Planning Authorities are required to:

- Set out design policies to ensure that developments function well, establish a strong sense of place, sustain a mix of uses, respond to local character, create safe accessible environments and that are visually attractive (para 58) – including site/area specific policies
- Set out their own approach to housing density to reflect local circumstances (para 47)
- Consider using Design Codes, avoiding unnecessary prescription (para 59)
- Have Local Design Review arrangements in place to provide assessment and support to ensure high standards of design (para 61)

185. The Core Strategy includes policies on Sustainable Construction (CP2) – which is accompanied by a *Sustainable Construction & Retrofitting Supplementary Planning Document* and an Environmental Quality policy (CP6), which includes a high level design quality policies and links to the Building for Life design assessment tool for residential development. In addition, a Design SPD and the Bath Building Heights SPD are under-preparation.

186. In addition, site specific design requirements are included within the Placemaking Plan and Core Strategy site allocations – Masterplans are typically required to be prepared for more complex sites or where sites are in multiple ownerships, and are always encouraged for complex or multi-phased developments.

187. The Council will consider the preparation of site briefs, design guides, design codes, Masterplans etc. to support the Core Strategy and the Placemaking Plan. In addition, B&NES Council is currently considering options for establishing a Local Design Review process.

Key Urban Design Tools

188.

There are number of key urban design tools which will be used by the Council, and should be utilised by Developers. Relevant tools include (but are not limited to):

- The Urban Design Compendium Key principles of Urban Design
- Manual for Streets (parts 1 and 2) Guide to Planning & Design of Residential Streets
- Link & Place Guide to Street Planning & Design for High Streets and busy urban streets
- Building for Life 12 12 principles for good residential design
- Secure by Design (3D interactive guide) urban design principles to ensure safe places
- By Design - Urban Design in the Planning System: Towards Better Practice (ABE guidance on policy tools and preparation of Masterplans, design guides and briefs
- Active Design Criteria & Matrix (Sport England) Design principles to encourage activity and sport
- Trees in Townscape (Trees and Design Action Group) Design principles supported by the Woodland Trust to encourage tree friendly spaces within developments

General Urban Design Principles

189.

The following urban design policies seek to address urban design at each of the morphological scales from strategic city, town and village scale to neighbourhood; street, block, plot, building to design detail and materials.

190.

Policy D.1 sets out the general urban design principles that will be applied at a high level, these are particularly relevant for large development sites or Masterplans, but the principles also apply equally to all development scales. The key principles reflect those found in the Urban Design Compendium.

POLICY D.1: General Urban Design Principles

The following general design principles will be applied, particularly for large scale development proposals or Masterplans:

- a** Places should be designed for people - to be safe, comfortable, varied and attractive. They should offer opportunities for interaction and delight.
- b** Development should enrich the character and qualities of places and should contribute positively to locally distinctiveness
- c** Development should make connections - by foot, cycle, public transport and by car - in that order. Streets and Spaces must be legible and easy to move around.

d Development should work with the landscape structure and should contribute positively to the characteristics of the settlement

e Places should be mixed use and should respond to context

f Buildings and spaces must be flexible and adaptable

g Buildings and spaces should be designed to be energy efficient (e.g. consider natural light and passive heating and cooling)

Developments that reflect these general urban design principles will be supported.

Local Character & Distinctiveness

191.

Policy D.2 sets out the policy on local character and distinctiveness, designs should respond to an analysis of the place in a positive way. Evidence of locally specific analysis which underpins the design rationale will be sought to demonstrate that this policy has been met. Existing local character appraisals, site briefs, and other evidence should be taken into account when establishing the local character and distinctiveness.

192.

To deliver this policy, a scheme must have a strong appreciation of local context and how the development responds and contributes towards this.

POLICY D.2: Local Character & Distinctiveness

Development proposals will be supported where they contribute positively to and do not harm local character and distinctiveness. In considering whether development proposals meet this requirement they will be assessed against the following criteria:

- a** The development has positively responded to the site context, in particular the local character, including uses, landmarks, layout, streets and spaces, siting, spacing, set-back, building lines, roofscapes, materials, building forms and features
- b** The development scheme improves areas of poor design
- c** The design responds appropriately to urban morphology, including consideration of historic grain – routes, block and plot patterns; mix of uses, building heights, massing and scale and local vernacular

d The design enhances and responds to natural features, including landscape, green infrastructure, skylines, topography and landform and views

e The development contributes towards the local social context in a positive way, providing safe, functional and attractive streets and spaces

f The development should, where appropriate, respect locally characteristic architectural styles, patterns, rhythms and themes which reflect local proportions

g The development reflects materials, colours, textures, landscape and boundary treatments that are appropriate to the area

Residential density must be compatible with character and higher net densities will be encouraged in accessible locations with good local facilities, to make efficient use of land.

Urban Fabric

193.

Policy D.3 relates to the way in which development needs to weave together and connect urban fabric, to ensure that places are well-connected, safe, inclusive and walkable.

POLICY D.3: Urban Fabric

Development proposals must contribute positively to the urban fabric, in particular development should be:

a Designed for ease of walking and cycling and provide safe and high quality routes, ideally providing new green infrastructure;

b Be permeable, by offering a choice of routes through a site, and connecting with the existing route networks in and through adjoining areas;

c Delivering perimeter block layouts wherever possible;

d Of an appropriate grain, reflecting local character;

e Be mixed use particularly at public transport nodes, and at local, district, city and town centres;

f Designed to maximise natural surveillance of the public realm;

g Designed with careful consideration of “edges” avoiding blank and inactive frontages. Active internal uses and habitable rooms are required at ground floor level;

h Where ground floor uses are residential, frontages should also allow for privacy for example incorporating level changes, boundary treatment while maintaining natural surveillance;

i Development forms with inactive or blank frontages should be carefully located, so that they can be wrapped by smaller buildings/active frontages or be placed in locations where at least one edge requires no active frontage. Horizontal mixing with other uses will also be encouraged;

j Give careful consideration to the design of corner plots, which should incorporate two active frontages;

k Create positive micro-climate effects (e.g. avoid pockets of cold, areas of overheating, heat, dazzle, wind or shade);

l Designed to provide continuity of street frontage and for development to relate positively to the street. There should be a clear distinction between backs and fronts of buildings;

m Designed in a way that does not adversely prejudice existing/future development or compromise adjoining sites.

Streets and Spaces

194.

Policy D.4 seeks to reinforce the importance of development making appropriate connections and relates specifically to streets, highways design and public realm.

Building Design

195.

Policy D.5 relates specifically to building-scale design and materials.

POLICY D.4: Streets And Spaces

Development proposals must be well connected, in particular:

- a** New development must respect and contribute towards a clear hierarchy of streets and spaces. The transport user hierarchy should be applied within all aspects of street design, considering the needs of pedestrians first, then cyclists, then public transport users, and finally vehicles.
- b** The impact of parking provision on connectivity needs to be resolved to avoid poor quality routes and poorly defined streets. Parking arrangements should be integrated into the street scene and large areas of surface parking should be avoided.
- c** Car parking and highways design should not dominate the design of the development or the public realm

d Shared surfaces must be legible and safe for all users.

e Designed to enhance and contribute towards the public realm in line with Policy D10

f Signage, lighting and street furniture must avoid street clutter and be respond to the local context, in line with Policy D10

g Open spaces should be defined positively with clear definition of public and private, appropriate enclosure

h Street trees and green spaces should contribute to a network of Green Infrastructure and should be adequately sited to promote connectivity for people and wildlife

POLICY D.5: Building Design

Development proposals must be well detailed, in particular:

a Building facades, reveals and entrances must be well designed, all elevations must be well articulated and an appropriate building line and/or boundary treatment should be maintained

b Building frontages should face and relate to the public realm, and should define the street

c Extensions must complement and enhance the host building

Good modern, innovative design is supported. Historical styles are likely to be considered appropriate where the development is re-unifying lost compositions

d Buildings and spaces should be designed to provide new or improved wildlife habitats and features (e.g. spaces for swifts and swallows; bat bricks; new hedgerows and other green infrastructure)

Amenity

196.

Policy D.6 covers the issue of amenity, ensuring that developments provide the appropriate level of amenities for new and future occupiers, relative to their use and avoiding harm to private amenity in terms of privacy, light and outlook/overlooking.

POLICY D.6: Amenity

Development must provide for appropriate levels of amenity and must:

- a** Allow existing and proposed development to achieve appropriate levels of privacy, outlook and natural light
- b** Not cause significant harm to the amenities of existing or proposed occupiers of, or visitors to, residential or other sensitive premises by reason of loss of light, increased noise, smell, overlooking, traffic or other disturbance.
- c** Allow for provision of adequate and usable private or communal amenity space and defensible space.
- d** Include adequate storage and functional arrangements for refuse and recycling
- e** Ensure communal refuse and recycling provision is appropriately designed, located and sized.

Infill & Backland Development

197.

Policy D.7 relates specifically to infill and backland development, it applies to all parts of the district both urban and rural, and emphasises the importance of an approach based on a sound understanding of character and context.

198.

Design and Access Statements (DAS) are required¹ for applications for major development (both full and outline) and for smaller scale developments in conservation areas or the Bath World Heritage Site. Listed building applications must also be accompanied by a DAS. A DAS must explain the design principles and concepts that have been applied to the development including how the context has influenced the design and the approach to access.

199.

The Design and Access Statement should contain evidence of a detailed analysis and response to local character and distinctiveness, proportionate to the nature and scale of the proposed development, with reference to the above criteria.

¹ Article 4 of Statutory Instrument 2013/1238 – sets out the legal requirements for DAS

POLICY D.7: Infill And Backland Development

Infill development is defined as the filling of a small gap in an otherwise built-up frontage, usually consisting of frontage plots only. Infill development could be supported where:

- a** Development has regard to the character and quality of the surrounding townscape
- b** New development reflects the form, pattern and grain of this existing development or otherwise enhances the character.
- c** Infill development on corner plots must give careful consideration to both the primary and the return frontage in relation to height scale, massing and design and should relate well to the treatment of corner plots within the local context

Neighbourhood Plans in B&NES may identify a locally specific definition of infill, with reference to local characteristics.

Backland development could be supported where:

- a** It is not contrary to the character of the area
- b** It is well related and not inappropriate or in height, scale, mass and form to the frontage buildings
- c** There is no adverse impact to the character and appearance, safety or amenity of the frontage development
- d** It is not harmful to residential amenity as outlined in Policy D.6

Lighting

200. Artificial lighting can have both positive and negative effects on the environment. In addition to its more immediate impact on visual and residential amenity it can also affect the wider environment through “light spill” into the night sky which results in the phenomenon known as “sky glow”. There is currently particular concern about the impact artificial lighting is having across the District in terms of increasing levels of sky illumination and light spill from development (external and internal) which detrimentally affects local amenity and the environment including ecology, in particular European protected bat species.

201. The NPPF makes it clear that planning policies should limit the impact of light pollution from artificial light: *‘By encouraging good design, planning policies and decisions should limit the impact of light pollution from artificial light on local amenity, intrinsically dark landscapes and nature conservation.’* The NPPG includes further guidance on the factors that are relevant in considering the implications of light pollution, including ecological impact.

202. Within Bath and other urban areas a high level of lighting exists and is generally accepted whilst recognising even within the urban area, important dark corridors and dark spaces do exist and these are used by, if not essential for, wildlife. The floodlighting of many historic buildings enhances the night time scene. However, badly designed lighting schemes can be just as damaging to private and public amenity as in darker rural areas. New light sources can have a disproportionate impact because of the area’s topography.

203. Within the open countryside external lighting is generally not acceptable. Lighting can be extremely prominent and in many cases visible over a large area and can often introduce an urban appearance to the countryside which for the most part is not lit at night.

204. The Council’s aim is to reduce the adverse impact of lighting installations both day and night throughout its area. In exercising control it will be mindful of the policies that apply in designated areas of ecological importance, high visual amenity and the surrounding areas where ill designed schemes could adversely affect their character and appearance. Applicants may be required to seek professional advice to ensure that their proposals are compatible with existing lighting schemes or any further lighting guidance drawn up by the Council.

205. When drawing up their proposals those seeking planning permission, listed building consent, or consent under the Town and Country Planning (Control of Advertisements) Regulations should always be advised by the Guidance Notes issued by the Institute of Lighting Professionals and other relevant advice and guidance such as the Bath Lighting Strategy. If necessary, applicants should seek specialist technical advice from a recognised lighting firm or consultant. Plans which accompany a planning application should demonstrate how this guidance has been taken into account.

206. The Institute of Lighting Professionals (ILP) is currently working on updating their guidance on all the other areas of external public lighting that are not included in BS 5489. This guide will include lighting of car parks, petrol filling stations, advertising hoardings, sports centres and others and will include guidance on obtrusive light and light pollution. It will also provide details of electrical requirements, specifications and regulations for outdoor lighting.

207. Policy D.8 sets out a number of general principles that apply to all proposals for artificial lighting. The Council may ask for a full technical report to accompany an application and this may be requested at the outline planning stage. It may also be necessary to prepare technical guidance to support the implementation of the policy.

POLICY D.8: Lighting

1 Proposals for artificial lighting will only be permitted where:

a they would not give rise to an unacceptable level of illumination into the sky, open countryside, urban areas or villages;

b it can be demonstrated that additional lighting on site will have no detrimental impact on visual and residential amenity or local ecology;

c any adverse impact of lighting proposals in all new development, including light spill and energy use, is minimised through design or technological solutions (including the use of SMART lighting techniques) or by controlling the hours of use;

d safety is not compromised in low lit or dark public area.

2 Development will be expected to reduce or at best maintain existing light levels to protect or improve the darkness of rivers, watercourse or other ecological corridors in particular to protect or provide a functional dark route for European protected species. New external lighting facilities with light spill to these features must be dimmable.

3 Lighting in public areas should be designed to a suitable level of illumination in accordance with BS 5489-1 2013 and where appropriate, ensure consistency with Bath Lighting Strategy and guidance and where necessary the hours of operation will be controlled by the use of conditions.

208.

Advertisements & Outdoor Street Furniture for Commercial Premises

209.

The aim of this policy is to provide guidance that will be used in the determination of planning, advertisement and listed building consent in relation to advertisement and outdoor street furniture for commercial premises - including signage (both fascia and ancillary signage/advertising), outdoor tables and chairs, low level barriers etc. This policy will ensure the delivery of good design, in line with NPPF para 57 and 61.

210.

Well placed and designed advertisements such as external signage and on shop fronts, and outdoor street furniture for commercial premises such as tables and chairs etc. can contribute to the vibrancy and vitality of the street scene and the public realm, can benefit the local economy and provide visual interest and character. However, the effect of poorly designed and inappropriately placed advertising and outdoor street furniture can create visual discord, and street clutter can provide barriers to proper pedestrian movement. In particular, cumulative impacts can be severely detrimental to the quality of the public realm. This is particularly important in the City and Town

Centres, and within the conservation areas and the City of Bath World Heritage site, but the principles apply to all commercial premises.

211.

The Local Planning Authorities (alongside Licencing and Highways) have specific powers in relation to the control and management of advertisements and outdoor street furniture relating to commercial premises. Where planning, advertisement consent and/or listed building consent are required the legislation provides control over the design and positioning of signage and the use of the highway for tables and chairs. In many cases, additional controls are in place which are implemented through Licencing and Highways functions and through additional controls imposed by private ownership (for example, Southgate Retail area in Bath has such an arrangement).

Policy Approach

212.

The policy is in two parts:

- Advertisement policy
- Outdoor Street furniture policy

213.

Additional detail is also provided for Bath Conservation Area in line with the stewardship principles WHS Management Plan (2014, or successor document).

214.

Policy D9 is supplemented by additional guidance found within (i) Bath Shop Fronts Guidance (1993), Commercial Signage and Tables and Chairs - Bath Design and Conservation Area Guidance (Draft, 2015)* and (iii) Conservation Area Appraisals

POLICY D9: Advertisements & Outdoor Street Furniture

Advertisements

The following criteria will be used to assess applications for advertisement on commercial premises that requires planning or listed building consent (including shops, cafés, offices etc.):

General Design Approach

a The number of signs should be kept to a minimum, with only one advertisement on each principle frontage.

b Redundant signs should be removed and opportunities to reduce signage should be sought where new signage is proposed. Development involving the alteration or replacement of traditional shop fronts will not be permitted, unless the proposals enhance the character of the building and the street scene.

c The following criteria will be used to determine the suitability of advertising signage (including fascia signs and projecting or hanging signs), which will include a consideration of cumulative impact and consideration of the proposal within the existing context:

- Local Street Character
- Location/Position
- Proportionate Size
- Position
- Colour
- Materials
- Lettering
- Illumination
- Fixings

d Free standing 'A' Boards can cause obstruction to pedestrians and require planning permission. 'A' boards will only be permitted where they do not impinge on pedestrian movement and meet the Council's detailed guidance.

e Permanent flags and banners are not considered acceptable, however, due consideration will be given to temporary flags and banners promoting local events.

f hoardings, panels and posters will be granted where they are located within a commercial, industrial or mixed use area or within the open countryside (the later will be restricted to a short-term, specified time period, for example in relation to a local event).

In addition, within conservation areas:

g The suitability of commercial signage and lettering on windows, blinds (external and internal), walls and external fixtures will need to be considered in terms of both their aesthetic/visual impact and potential harm to historic fabric. Cumulative impact will be considered in addition to building specific impacts.

Outdoor Street Furniture

The following criteria will be used to assess applications for outdoor street furniture for commercial premises (external tables and chairs, low level barriers etc.), where planning or listed building consent is required:

General Design Approach

h The principle locations where applications for street furniture in the highway will be supported, are locations within (i) fully pedestrianised streets, (ii) in partially pedestrianised streets or where vehicle access is not permitted at certain times of day and (iii) in streets with footways of adequate clear width (a minimum of 2m).

i The acceptability, or otherwise, of using the public highway for outdoor street furniture associated with commercial premises (including shops, cafés, offices etc.), will be considered in relation to the following criteria:

Location and Siting

- Tables and chairs should not obstruct drivers sight lines
- Emergency access should not be obstructed
- Access to utility equipment should be achieved
- Fixed seating should be avoided
- Street furniture should be stable
- A direct route of minimum width (1m) should be maintained to access the premises

Hours of operation

- Consents may be time limited and hours of operation should be specified (in line with licencing requirements)

In addition, within Conservation Areas

j The inclusion of advertising on barriers, umbrellas or other street furniture is unlikely to be acceptable.

k Umbrellas over 2m in height are unlikely to be acceptable.

Local Guidance such as the Bath Shopfront Guidance and the Commercial Signage and Tables and Chairs - Bath Design & Conservation Area Guidance, or successor documents should be utilised in informing decision making on detailed design matters.

Public Realm

215. Public realm is defined as any publicly owned streets, pathways, right of ways, parks, publicly accessible open spaces and any public and civic building and facilities. Development proposals often include areas of public realm as part of their proposals and or contribute financially to the creation to new or enhanced streets and spaces.

216. The Council has prepared a number of strategies and guidance to support the delivery and coordination of quality of public realm improvements and maintenance. In addition, Neighbourhood Plans often include detailed public realm proposals and policies.

217. In Bath, the Council has adopted a *Public Realm and Movement Strategy* for Bath City Centre in March 2010. This is supplemented by the *Bath Pattern Book - Public Realm Framework* (Part 1) and *Technical and Operational Guidance* (Part 2) (December 2015) and associated *Street Furniture Pattern Book Design Guide, Operation and Maintenance Manual* & the *City Information Systems Design Guide*.

218. Both the Public Realm and Movement Strategy and the Pattern Book put forward an incremental plan to transform streets and spaces across the City Centre and create the canvas for a more animated and inclusive public life. In summary, this approach intends to:

- Rebalance the movement hierarchy giving priority to pedestrians, cyclists and public transport;
- Refashion the public realm creating a lattice of connected streets and spaces and utilising high quality materials, bespoke furniture and exceptional landscape and lighting design;
- Reveal the city through the introduction of a new multi-channel information and wayfinding system for all modes of movement;
- Reanimate the city centre through an imaginative and pioneering programme of public art, events and activities.

POLICY D.10: Public Realm

Development proposals must be designed to enhance the public realm and should contribute towards achieving public realm infrastructure improvements, in line with the Planning Obligations SPD, and successor documents.

Development schemes must comply with the adopted public realm design codes. Within Bath City Centre, as defined on the Policies Map, development schemes should respond to the Bath Public Realm and Movement Strategy and the Bath Pattern Book, or successor guidance.

HISTORIC ENVIRONMENT

219.

The Core Strategy recognises the value of the historic environment across the spectrum of future placemaking. Sensitive management of Bath and North East Somerset's outstanding cultural and historic environment is a key component in the delivery of sustainable development, and is an asset that adds value to regeneration, business and the growing tourism sector. It acts as a highly significant stimulus to local economic growth. Managing change in the historic environment involves well-established close working with Historic England and the local community, including local preservation and amenity groups and other such organisations.

220.

The international significance and importance of Bath is supported by its World Heritage Site designation. Beyond Bath the District has a rich and diverse historic environment, including locally distinct vernacular architecture, uniquely important archaeology and industrial and its coal mining heritage.

221.

Great weight will be given to conserving the significance of designated heritage assets and their setting. Heritage assets include any valued component of the historic environment, be it a building, monument or place which is positively identified as having a degree of significance meriting consideration in the planning process.

222.

Within Bath and North East Somerset the designated heritage assets are:

- City of Bath World Heritage Site
- Over 6,000 listed buildings (3% Grade I, 10% Grade II*, 87% Grade II)
- 36 conservation areas
- 74 Scheduled Ancient Monuments
- The Registered Lansdown Historic Battlefield site.
- 16 Registered Historic Parks and Gardens
- 71 Parks and Gardens designated locally by the Avon Gardens Trust

223.

Many of the District's non-designated heritage assets are also highly regarded and often much-cherished local elements of the area ranging from historic street furniture to redundant but locally important historic buildings. They may be identified for conservation during the development management process or other planning processes to assess local character. These include conservation area and village character appraisals, emerging Neighbourhood Plans and where assessing potential urban and rural development sites. Following identification they can be added to a local list of non-designated heritage assets. Where appropriate the Council will consider serving Article IV Directions to assist in conserving the local character of a conservation area.

224.

Government guidance makes it clear that the effect of a proposal on the significance of a non-designated heritage asset should also be taken into account when determining applications. Non-designated archaeological heritage assets of demonstrably equal significance to Scheduled Ancient Monuments will be subject to the same policy considerations as designated heritage assets.

225.

The Council will review its programme for conservation area appraisals to ensure they remain up to date and relevant, prepare and periodically update a local Heritage at Risk Register working with Historic England, and define locally important heritage assets. It will continue to prepare specific local guidance on the management of the historic environment and update existing guidance on subjects as diverse as historic shop fronts, stone cleaning and retro-fitting. These add more detailed advice or guidance to supplement policies in the Core Strategy and Placemaking Plan and help support the submission of well-informed applications.

226.

To sympathetically manage heritage assets in the development process there must be a clear understanding of the assets themselves, including their significance and setting. Early pre-application work by the developer is encouraged to avoid abortive and costly work at a later stage.

227.

The setting of a heritage asset is an important consideration as identified in good practice advice published by Historic England. Its contribution to the significance of any asset should be understood to inform the appropriate development response.

228.

The Council will continue to maintain and make available the Historic Environment Record (HER) to help inform change and the conservation of the District's heritage assets. It includes conservation area appraisals and management plans, Supplementary Planning Documents, guidance and other relevant sources of information. It is particularly valuable to prospective developers and the local authority development management function and will be used to inform the consideration of future development including potential conservation and enhancement measures.

229.

It is the applicant's responsibility to provide sufficient information and assessment of the impacts of their scheme on heritage assets and/or their settings, and the wider historic environment. To ensure the opportunities provided by the historic environment are appreciated, the HER should be referred to at an early stage in the design process. Therefore applications affecting the significance of a heritage asset will be required to provide sufficient information, such as desk-based assessment reference to the HER, field evaluation or a historic building report, to demonstrate how the proposals would contribute to the asset's conservation. Where a development would result in the partial or total loss of a heritage asset and/or its setting, the applicant will be required to secure a programme of recording and analysis of that asset, and to ensure the publication of that record to an appropriate standard. Relevant advice and guidance is also available on the Historic England web site.

230.

Energy efficient improvements and the installation of micro-renewables affecting designated and undesignated historic buildings and areas, including listed buildings and conservation areas are supported provided that the proposals are consistent with relevant policies, in particular, Core Strategy CP1 'Retrofitting existing buildings' and Policy CP6 'Environmental quality' and Policy HE1 below. Applicants are also advised to take account of the Energy Efficiency & Renewable Energy Guidance for Listed Buildings and Undesignated Historic Buildings (September 2013) and other related and relevant Council guidance and supplementary planning documents.

Policy approach**231.**

Policy CP6(2) of the Core Strategy includes the context for historic environment policy, and for development management purposes explains how the Council proposes to secure the conservation of its heritage assets throughout the District. Policy B4 seeks to prevent harm to the Outstanding Universal Value of the City of Bath World Heritage Site and its setting and is a material consideration when making planning decisions.

232.

The purpose of Policy HE1 is to add more detail to these policies by setting out the circumstances in which development proposals affecting the historic environment will be considered. It reflects national policy and guidance and supports the Core Strategy's strategic policies for the historic environment and its positive approach to the conservation of the District's heritage assets. The aims of this policy approach are:

- to manage the historic environment in the most efficient and effective way in order to sustain its overall value to society
- to ensure the proper assessment and understanding of the significance of a heritage asset and the contribution of its setting in the development process

POLICY HE1: Historic Environment

Safeguarding Heritage Assets

1 Within the scope of Core Strategy Policies B4 and CP6, development that has an impact upon a heritage asset, whether designated or non-designated, will be expected to enhance or better reveal its significance and setting.

2 The District's historic environment shall be sustained and enhanced. This includes all heritage assets including the Bath World Heritage Site, historic buildings, conservation areas, historic parks and gardens, landscape, archaeology and townscapes of importance.

3 Development affecting a designated or non-designated heritage asset and its setting will be expected to make a positive contribution to its character, appearance and significance.

4 Applications affecting the significance of any heritage asset will be required to provide sufficient information to demonstrate how the proposals would contribute to the asset's conservation.

5 The Historic Environment Record, including Conservation Area Character Appraisals and Management Plans will be used to inform the consideration of future development including potential conservation and enhancement measures.

6 Great weight will be given to the conservation of the District's heritage assets. Any harm to the significance of a designated or non-designated heritage asset must be justified. Proposals will be weighed against the public benefits of the proposal; whether it has been demonstrated that all reasonable efforts have been made to sustain the existing use, find new uses, or mitigate the extent of the harm to the significance of the asset; and whether the works proposed are the minimum required to secure the long term use of the asset.

7 If such harm can be fully justified, where relevant the Council will require archaeological excavation and/or historic building recording as appropriate, followed by analysis and publication of the results.

8 In addition, the following will apply to specific asset types as listed below:

a City of Bath World Heritage Site

Development within the City of Bath City World Heritage Site will be expected to comply with Policy B4 of the Core Strategy and all other relevant supplementary information and guidance; and help support the delivery of the World Heritage Site Management Plan.

b Listed buildings

The significance of listed buildings is required to be sustained and enhanced. Appropriate repair and reuse of listed buildings will be encouraged.

Alterations, extensions or changes of use, or development in their vicinity, will be expected to have no adverse impact on those elements which contribute to their special architectural or historic interest, including their settings.

c Conservation Areas

Development, including any proposed demolition, within or affecting the setting of a conservation area will only be permitted where it will preserve or enhance those elements which contribute to the special character or appearance of the conservation area.

The Council will look for opportunities from new development within conservation areas and within the setting of heritage assets to enhance or better reveal their significance.

d Archaeology

Scheduled monuments and other non-designated archaeological sites of equivalent significance should be preserved in situ. In those cases where this is not justifiable or feasible provision should be made for their excavation and recording. The appropriate publication and curation of the finds/archive will be required.

e Registered Historic Parks and Gardens

Development will be expected to respect the design, character, appearance and settings of registered historic parks and gardens and to safeguard those features which contribute to their significance and are integral to their character and appearance.

f Lansdown Registered Historic Battlefield

Development will be expected to respect the character, appearance and setting of the Lansdown battlefield, safeguarding those features which contribute to its significance.

g Non-designated heritage assets

Proposals affecting non-designated heritage assets, including unscheduled archaeology, unlisted buildings and local parks and gardens, should ensure they are conserved having regard to their significance.

233.

Supplementary Planning Documents and Guidance and other relevant guidance should be referred to where appropriate to inform and support the submission of successful applications. It will also be used to guide decision-making on proposals for development, including:

- Bath World Heritage Site Management Plan (2015)
- City of Bath World Heritage Site Setting SPD (August 2013)
- Bath Building Heights Strategy (September 2010)
- Bath City-wide Character Appraisal (August 2005)
- Bath Shopfronts – guidelines for Design and Conservation (1993)
- Public Realm and Movement Strategy (2010)
- Bath Pattern Book (2015)
- Bath Morphology Study (2015)
- Archaeology in Bath & North East Somerset SPG (May 2004)

- Archaeology in Bath SPG (May 2004).

- Conservation Area Character Appraisals (link to where these are held?)

- Streetscape Manual SPD (April 2005)

- Energy Efficiency & Renewable Energy Guidance for Listed Buildings and Undesignated Historic Buildings (September 2013)

- Parish Character Assessments

234.

Other important sources of information include:

- The National Heritage List for England

- The Council's Historic Environment Record (HER)

- The 'Heritage at Risk' register

- In-house and local knowledge and expertise, including that provided by Historic England

Somersetshire Coal Canal and the Wansdyke

235. The Somersetshire Coal Canal and the Wansdyke earthwork are two important linear historic assets in Bath and North East Somerset.

236. The Wansdyke is a nationally important and is one of the most significant historical features within the area and is a Scheduled Monument. There is no clear evidence about the origin or purpose of the Wansdyke however this earthwork starts at the Maes Knoll hill fort and runs to Horsecombe to the south of Bath. Some sections are clearly visible above the ground.

237. The remains of the Somersetshire Coal Canal are a significant reminder of the District's coal mining history. The canal was constructed between 1795 and 1801 to link the North Somerset coalfields with the Kennet and Avon Canal. The primary functional boundaries of the Canal, and the extent of the Canal Company's ownership, are recorded on the 1841 series of Tithe Maps held at Bath Guildhall. The main branch followed the Cam valley from north of Paulton to the Dundas Aqueduct and served the coal fields around Paulton, Timsbury, Camerton and Dunkerton. It was used until the end of the 19th century, by which time it had been superseded by the railway. The surviving locks and bridges on the Northern Branch are nationally listed heritage assets, and many are considered to be At Risk.

238. Whilst these historic assets would benefit from the provisions of Core Strategy Policy CP6 and Policy HE1 above, the importance of these linear routes are highlighted in a separate policy and are defined on the Policies Map with a buffer to catch the widest point of the assets.

239. These linear historic assets are key components of wider multifunctional green corridors highlighted in the Green Infrastructure Strategy 2013 and therefore also need consideration under Green Infrastructure Policy NE1.

POLICY HE2: Somersetshire Coal Canal And The Wansdyke

Development adversely affecting the physical remains and/or historic routes of the Wansdyke or Somersetshire Coal Canal, as defined on the Policies Map, and/or their setting, will not be permitted unless it can demonstrate appropriate mitigation and/or enhancement consistent with Policy HE1.

LANDSCAPE

240.

The landscape forms the context for people's lives. Its character and quality is key to maintaining a strong sense of place which is an important objective in the National Planning Policy Framework (NPPF). The ELC provides the context for developing a vision for the landscape and for managing it. It promotes the protection, planning and management of all landscapes whether urban, edge of settlement or rural, and whether ordinary / degraded or outstanding and whether designated or not.

Policy context

241.

The NPPF requires local authorities to take a criteria based approach to protecting the landscape. This approach requires an understanding of landscapes that are valued and an understanding of the significance of particular landscapes and their components rather than just carrying out a crude check whether the landscape is designated or not. The established process of landscape character assessment is the key tool for guiding decisions.

242.

The NPPF stresses that great weight should be given to conserving the landscape and scenic beauty of the AONBs and that major development in these nationally designated areas will be refused except in exceptional circumstances. Outside of these designated areas the impact of development on the landscape can be an important material consideration. The NPPF also states that allocations of land should favour land of lesser environmental value and that the planning system should protect and enhance valued landscapes. Decisions affecting the landscape and views will therefore be judged not only on its designation but also on the value and the significance of the landscape and its features and the degree of harm caused by the proposed development.

243.

Core Strategy Policy CP6 'Environmental Quality' seeks to conserve and enhance the distinctive character and quality of the District's distinctive urban and rural landscape. Policy NE2 provides a more detailed policy framework to ensure landscape character and quality is protected, conserved and enhanced across the District. Policy NE2A specifically focuses on conserving and enhancing the landscape setting of settlements of Bath and North East Somerset.

Conserving and enhancing the landscape and landscape character (Policy NE2)

244.

The District has a distinct character which is cherished by residents and visitors. Recognition of the special characteristics of cultural, social and environmental significance often referred to as 'the sense of place' or 'spirit of the place' is an important objective when considering development proposals. New development will be expected to reinforce the local landscape character and make a positive contribution to views.

245.

Key areas, characteristics and features of particular value to the distinct landscape character of Bath and North East Somerset comprise:

i Designated areas including:

- The City of Bath World Heritage Site and its setting

- Mendip Hills and Cotswolds Areas of Outstanding Natural Beauty

- Registered Historic Parks & Gardens

- Conservation Areas

- Historic parks and gardens of local importance

ii Aspects of landscape character and associated characteristics listed in Table 6 (below)

iii Networks of green spaces and environmental features

246.

Some of the key elements which contribute to the District's distinct character are listed in Table 6.

Table 6:

Key factors which contribute to the District's distinct character.

This list is not intended to be fully comprehensive.

1. NATURAL FACTORS including:

- distinct landform / geomorphology / geology particularly which helps to define a place such as river valleys / drainage patterns,
- plateaus, skylines (treed, farmland or open space) and ridge lines, distinctive hills such as at Kelston Roundhill or Farmborough Common, and areas of coal bearing rocks;
- river corridors and natural water bodies including associated trees, woodland, farmland and open space;
- natural landmarks;
- distinct land cover or natural habitat including landscapes important for wildlife such as traditional flower-rich meadows, wetlands, trees and woodlands.

2. CULTURAL AND HUMAN FACTORS including:

- man-made landmarks and distinctive landscapes modified by human activity such as coal batches;
- historic earthworks;
- follies;
- water bodies including ponds, lakes and canals including associated trees, woodland, farmland and open space;
- copses, orchards, tree-lines and woodlands;
- parkland and parkland trees;
- historic landscapes and distinctive historic hedgerow patterns and field and ditch systems;
- disused quarries, railway lines, coal canals and other industrial archaeological features;
- settlements and distinctive settlement patterns strongly associated with underlying or surrounding landscape and natural resources; the designed or incidental landscape associated with or forming the setting of heritage assets;)
- culturally / historically significant landscapes such as landscapes associated with literature, art or historical events;
- landscapes associated with events such as fairgrounds, traditional village greens;
- greenways and other ancient routes;
- landscapes with specific landscape quality, condition or aesthetic qualities.

3. VISUAL AND PERCEPTUAL FACTORS including:

- special views, viewpoints and visual characteristics (e.g. sequential views);
- open spaces within settlements which are visually distinctive and attractive in themselves or which are visually important to the local character of the settlement or local area;
- tranquillity;
- landscapes with significant associations;
- significant perceptual factors such as colour, texture, form and pattern.

For more detail refer to 'An Approach to Landscape Character Assessment' (Natural England) October 2014 and other guidance and best practice examples.

247.

Proposals for new development should demonstrate an understanding of the wider landscape context including identifying important landscape, heritage and ecological assets on and surrounding the site and should take account of what the community considers as valued landscape characteristics and features. Proposals should include an assessment of the landscape and visual effects to a level commensurate to the scale of likely effects using the Guidelines for Landscape and Visual Impact Assessment, 3rd edition (2013) or any subsequent updated guidelines and best practice. Applicants are expected to make full use of available guidance and documents including existing landscape character assessments and relevant planning guidance, management plans, conservation area appraisals and neighbourhood plans (see list at the end of the section).

248.

Green space is a key contributor in enhancing the sense of place and the quality of the environment and will be expected to be incorporated into development proposals in order to enhance landscape character and biodiversity, to provide sustainable public access and to provide other landscape benefits such as shading and shelter.

249.

The purpose of Policy NE2 is to protect, conserve and enhance the character and quality of the landscape of the District.

POLICY NE2: Conserving And Enhancing The Landscape And Landscape Character

1 Development will be permitted where it:

a conserves or enhances local landscape character, landscape features and local distinctiveness

b incorporates green space within the scheme that positively contributes to creating a high quality environment by enhancing landscape character and biodiversity and providing sustainable public access and other landscape benefits

c is demonstrated that the whole scheme, including hard landscape and planting proposals, will contribute positively to the local area including reference to relevant existing landscape assessments supplemented by any additional assessments

d conserves or enhances important views particularly those to significant landmarks and features and take opportunities to create new local views and vistas.

2 Development should seek to avoid or adequately mitigate any adverse impact on landscape.

3 Proposals with potential to impact on the landscape / townscape character of an area or on views should be accompanied by a Landscape and Visual Impact Assessment undertaken by a qualified practitioner to inform the design and location of any new development.

Landscape setting of settlements (Policy NE2A)

250. Settlements often have distinctive landscape settings which not only contribute to their distinctive character and quality but which are also highly valued reflecting their significance as places where people live and work. In many cases these areas may have memories and associations stretching back generations. They are often vulnerable and it is an important objective to protect their character when considering development proposals. Landscape setting in the context of this policy is taken to include the surroundings of the settlement as well as undeveloped or well 'treed' areas which may be within the settlement and are important to the context of the developed areas.

251. The largest settlements in B&NES all have very distinctive landscape settings. Many villages similarly have distinctive landscape settings which are closely linked to their settlement patterns.

252. There is on-going need for further development; in particular for housing which is primarily focussed on the larger settlements, but, also in the villages throughout B&NES. The purpose of Policy NE2A is to ensure the protection of key landscapes and landform, landmarks and views / viewpoints which particularly contribute to the landscape setting of settlements. The list of characteristics contributing to landscape character included in Table 6 was used in identifying landscapes which are significant to settlements and their setting. Selected areas which have been assessed against and meet the criteria are shown on the Policies Map and will be afforded specific protection under the policy.

253. The methodology used in identifying these areas and descriptions of the landscape characteristics are given in separate background evidence to this policy. In general designated areas at Bath, Keynsham, Midsomer Norton, Westfield, Radstock and other settlements will be undeveloped landscapes (e.g. farmland, historic parkland, informal public open space) or areas with low density development which have the appearance of an overall wooded or heavily treed parkland landscape seen from within or approaching the settlement. They will both satisfy any or all of the criteria listed in Table 1 and contribute to the landscape setting of the settlement as outlined below and in the supporting evidence. These areas may form the surrounding landscape and visual setting to a settlement or be contained within settlements. Areas included may be in public or private ownership and may or may not have public access.

Landscape Setting of Bath

254. The City of Bath WHS Setting SPD recognises the importance of the distinctive landscape setting of Bath in a bowl formed by the River Avon valley as it cuts through the Cotswolds. Policy NE2A protects the landscape which is of importance to the distinct form and character of the city including; the green hillsides which contribute to views from the city, the River Avon and Kennet & Avon Canal corridors and the outer part of the landscape bowl which contains the city.

255. These areas are an important component of the landscape and as such may include areas which are important to the significance of the WHS and areas which are of significance to the Cotswold Area of Outstanding Natural Beauty. Core Strategy Policy B4 is the overarching policy for protection of the WHS and its setting and should be read in conjunction with this Policy NE2A.

256.

The green spaces within the settlement and the hillsides include those areas which make a significant contribution to views and / or to the character of the city and are largely undeveloped woodland, farmland or parkland / public open space but also include areas of low density development which give the appearance of woodland or heavily treed parkland. Undeveloped skylines (usually wooded) are an important component which the policy seeks to protect from development encroachment on or close to the skyline when seen from within the City and views from key viewpoints and assets. The hillsides include those areas originally mapped in the City of Bath World Heritage Site Setting SPD and subsequently reviewed to include areas forming the landform bowl surrounding the city which are of importance in preventing the creep of built development down the slopes and out of the containing bowl. The river and canal corridors include the course of the waterways themselves as well as the associated green corridor and open spaces along their route. Trees and views to trees along the corridor are an important characteristic which the policy seeks to protect and enhance.

Landscape Setting of Keynsham

257.

The town of Keynsham has grown up at the point where the River Chew meets the River Avon. Over time the town has spread away from the flood plain and marshy land beside the River Avon, developing southwards on the plateau land either side of the distinctive and beautiful Chew valley. The valley is largely undeveloped and runs through the heart of the town. The policy includes protection of the Chew Valley, areas of community woodland, west facing slopes on the western edge of the town and lower lying parts of the Avon valley which contribute to the setting of Keynsham.

Landscape Setting of Radstock, Westfield, Midsomer Norton

258.

The towns of Radstock, Westfield and Midsomer Norton have grown up in and around the highly distinctive confluence of five valleys and are also defined by the coal industry and the local coal field which contributes to their unique character. Predominantly the developed areas follow the more sheltered and shallow valley sides and also the intervening, lower level, narrow ridge tops between the brooks. The higher level valley sides and ridge/plateau tops surrounding the towns have remained largely undeveloped apart from the nearby hamlet of Haydon associated with its mine. The policy includes protection of the distinct landform and landscape associated with watercourses and with the coal mining history and the green hillsides which contribute to the landscape setting of these settlements.

Landscape Setting of Villages

259.

The landscape setting of the RA1 villages has also been assessed. The diversity of factors which help to give the villages their distinctive sense of place is reflected in the varying extent and nature of their landscape setting. The villages of Paulton and Peasedown St. John, for example, are both ridge top settlements with a particular association with coal mining. Both villages have maintained their predominantly ridge top nature, both look out over the attractive valleys of the Cam and Wellow Brooks and these are of particular visual importance and both have associations with particular nearby wooded coal batches. The particular nuances of ridge top and valley landform, the particular locations and shapes of the batches and the particular nature of the field patterns and woodlands, networks of roads and paths all vary giving each settlement its specific character. In other villages landform may be less of a factor in determining the nature of the village as a place while other factors may be more important in contributing to the landscape setting of these settlements.

260.

The purpose of Policy NE2A is to protect, conserve and enhance the landscape setting of settlements. Areas which make a significant contribution to the landscape setting of Bath, Radstock, Westfield, Midsomer Norton, Keynsham and RA1 villages are shown on the Policies Map.

261.

National and local guidance to inform development proposals and to guide decision-making includes:

National

- An Approach to Landscape Character Assessment, Natural England (October 2014)
- National Character Area Profiles areas 107, 118 and 141 Natural England
- CPRE Tranquillity Map
- The Natural Choice: securing the value of nature DEFRA (June 2011)
- European Landscape Convention Guidance Natural England (April 2009)

Local

- Mendip Hills and Cotswolds Area of Outstanding Natural Beauty Management Plans, Position Statements and landscape character assessments
- Rural Landscapes of Bath and North East Somerset – A Landscape Character Assessment (April 2003)
- Conservation Area Appraisals
- Bath City-wide Character Appraisal (August 2005)
- The City of Bath World Heritage Site Setting SPD (August 2013)
- The City of Bath World Heritage Site Statement of Outstanding Universal Value
- City of Bath World Heritage Site Attributes
- The City of Bath World Heritage Site Management Plan
- Landscape Setting Methodology and Evidence
- Bath and North East Somerset Green Infrastructure Strategy (March 2013)

POLICY NE2A: Landscape Setting Of Settlements

Any development should seek to conserve and enhance the landscape setting of settlements and their landscape character, views and features. Development that would result in harm to the landscape setting of settlements will not be permitted.

Extension of residential curtilages in the countryside

262.

Many existing dwellings in the countryside outside Bath and settlements with a defined Housing Development Boundary provide attractive homes for people seeking a rural location. Proposals to alter or extend dwellings and carry out minor domestic development will be assessed within the terms of design policies and in the case of existing dwellings in the Green Belt, paragraph 89 would apply.

263.

Policy NE2B provides specific control over the enlargement of residential curtilages. Such enlargement can, depending on the circumstances, have a detrimental effect on the special landscape qualities and character of the area and lead to 'suburbanisation' of the countryside. In the Green Belt such schemes can conflict with the purposes of this national designation.

POLICY NE2B: Extension Of Residential Curtilages In The Countryside

Proposals to extend residential curtilages will be permitted provided it can be demonstrated that there are no adverse impacts on the setting of the site or property, residential amenity, local rural landscape character, key habitat features and/or ecological functions and that the proposed boundary treatment is sympathetic to the location.

NATURE CONSERVATION

264.

The NPPF expects local planning authorities to include criteria based policies in their Local Plan against which the impact of development proposals on or affecting protected biodiversity and geodiversity can be considered. It also requires distinctions to be made between the hierarchy of international, national and locally designated sites. This is so that protection commensurate with their status and appropriate weight is given to their importance and the contribution that they make to wider ecological networks. It also should plan for biodiversity at a landscape-scale across local authority boundaries.

265.

Core Strategy Policy CP6 sets out the high level policy approach to the natural environment within which more detailed Development Management policies have been developed. It highlights the need to create a coherent network of more robust and resilient natural habitats, including larger protected sites and a greater extent and connectivity of natural habitats.

266.

The Core Strategy also draws attention to the district's rich diversity of habitats, features and sites from international (Special Protection Areas/Special Areas of Conservation), national (Sites of Special Scientific Interest) and locally protected sites (Sites of Nature Conservation Interest).

Policy aims

- Conserve, enhance and restore the diversity and resilience of the wildlife and species and habitats in both urban and rural areas
- Provide for the appropriate management of the District's biodiversity and geodiversity assets through the planning process and partnership initiatives
- Ensure that a coherent network of wildlife corridors is retained and enhanced to facilitate migration through the landscape and built environment which can be incorporated into a broader Green Infrastructure network.

Sites, species and habitats

267.

Policy NE3 seeks to conserve and increase the abundance and diversity of Bath and North East Somerset's wildlife habitats species and to minimise adverse effects where conflicts of interest are unavoidable. It covers internationally, nationally, and locally important sites, species and habitats, as well as seeking to protect a range of natural features which are valuable for wildlife, amenity, historic, recreational or visual reasons and act as routes for wildlife migration. The policy articulates what is required of developers when submitting a planning application which either directly or indirectly affects wildlife sites or habitats.

POLICY NE3: Sites, Species And Habitats

1 Development that would adversely affect, directly or indirectly, internationally or nationally protected species and/or their habitats will not be permitted.

2 Development that would adversely affect, directly or indirectly, Internationally Important Sites will not be permitted except in exceptional circumstances where:

a there is no alternative solution; and,

b there are imperative reasons of overriding public interest for the development; and

c mitigation measures can be secured to prevent any significant adverse effect on the site.

3 Development which would adversely affect, directly or indirectly other, species, habitats or features of biodiversity/geodiversity importance or value will only be permitted in the following cases:

a for SSSIs, where the benefits of the development, at this site, clearly outweigh both the impacts that it is likely to have on the features of the site that make it of special scientific interest and any broader impacts on the national network of Sites of Special Scientific Interest;

b for Sites of Nature Conservation Importance; Local Nature Reserves, Regionally Important Geological/ Geomorphological Sites and other sites of equivalent nature conservation value, where material considerations are sufficient to outweigh the local biological geological / geomorphological and community/amenity value of the site;

c for Priority Species and Habitats, where the importance of the development and its need for that particular location is sufficient to override the value of the species or habitat;

d for locally important species, where the importance of the development and its need for that particular location is sufficient to override the value of the species or habitat;

e for features of the landscape such as trees, copses, woodlands, grasslands, batches, ponds, roadside verges, veteran trees, hedgerows, walls, orchards, and watercourses and their corridors if they are of amenity, wildlife, or landscape value, or if they contribute to a wider network of habitats, where

such features are retained and enhanced unless the loss of such features is unavoidable and material considerations outweigh the need to retain the features.

4 In all cases:

a Firstly, any harm to the nature conservation value of the site is minimised; and

b secondly, compensatory provision of at least equal nature conservation value is made for any outstanding harm, and

c Thirdly, ecological enhancements are made.

d Then, as appropriate:

i Measures for the protection and recovery of priority species are made.

ii Provision is made for the management of retained and created habitat features.

iii Site lighting details are designed to avoid harm to nature conservation interests; including habitat connectivity and function as part of an ecological corridor.

Ecosystem Services

268.

The NPPF describes 'Ecosystem Services' as 'the benefits people obtain from ecosystems such as, food, water, flood and disease control and recreation'. It also highlights the role the planning system has in contributing to and enhancing the natural and local environment by recognising the wider benefits of ecosystem services.

269.

The key ecosystems services that Policy NE4 is seeking to protect and enhance are supporting services, provisioning services, regulatory services and cultural services. The Millennium Ecosystem Assessment (2001–2005) summarises ecosystem services classification as follow:

Supporting services: The services that are necessary for the production of all other ecosystem services including soil formation, photosynthesis, primary production, nutrient cycling and water cycling.

Provisioning services: The products obtained from ecosystems, including food, fibre, fuel, genetic resources, biochemicals, natural medicines, pharmaceuticals, ornamental resources and fresh water.

Regulating services: The benefits obtained from the regulation of ecosystem processes, including air quality regulation, climate regulation, water regulation, erosion regulation, water purification, disease regulation, pest regulation, pollination, natural hazard regulation.

Cultural services: The non-material benefits people obtain from ecosystems through spiritual enrichment, cognitive development, reflection, recreation and aesthetic experiences – thereby taking account of landscape values.

POLICY NE4: Ecosystem Services

1 Development will be permitted where ecosystem services are protected and enhanced in order that their benefits and function are optimised with a particular focus on supporting, provisioning, regulatory and cultural services.

2 Ecosystem measures proposed should be described in the Design and Access Statement and can be included within Green Infrastructure provision.

Ecological networks

270.

One of the aims of the national strategy 'Biodiversity 2020' is to ensure coherent and resilient ecological networks are established. This will help enable biodiversity assets to recover from loss and become resilient to climate change impacts and deliver ecosystem services which are of social and economic value. It is important to maintain and improve habitat connectivity in ensuring the long-term survival of biodiversity in a changing climate and environment which has become fragmented by human activities. 'Ecological networks generally have five components.

- Core areas of high nature conservation value which contain rare or important habitats or ecosystem services. They include protected wildlife sites and other semi-natural areas of high ecological quality.
- Corridors and 'stepping stones' enabling species to move between core areas. These can be made up of a number of small sites acting as 'stepping stones' or a mosaic of habitats that allows species to move and supports ecosystem functions.
- Restoration areas, where strategies are put in place to create high value areas (the 'core areas' of the future), restoring ecological functions and wildlife.

- Buffer zones that protect core areas, restoration areas, and 'stepping stones' from adverse impacts in the wider environment.

- Sustainable use areas, areas of surrounding land that are managed in a sustainable and wildlife friendly way.'

271.

National planning policy requires that components of the local ecological networks are identified and mapped. This should include the hierarchy of international, national and locally designated sites of importance for biodiversity, wildlife corridors and stepping stones that connect them. Bath & North East Somerset's Ecological Networks comprises:

- The Cotswolds Nature Improvement Area (NIA)
- Strategic Nature Areas (SNAs)
- Horseshoe Bat Foraging Corridor (Draft)
- Protected Wildlife sites (Special Protection Areas, Special Areas of Conservation; Sites of Special Scientific Interest, Sites of Nature Conservation Interest, Local Nature Reserves)
- UK Priority Habitats including conservation buffers/ restoration zones
- Flood Zone 2

POLICY NE5: Ecological Networks

Development proposals will be expected to demonstrate what contribution will be made to ecological networks as shown on the Policies Map through habitat creation, protection, enhancement, restoration and/or management.

Trees and Woodland Conservation

272.

Trees are an important part of our natural life support system: they have a vital role to play not just in the sustainability of our urban and rural areas, but as an important component of green infrastructure networks. They benefit:

- the local economy – creating potential for employment, providing a sustainable source of compost and biofuels and the raw materials for businesses, encouraging inward investment, bringing in tourism and adding value to property
- the local environment by reducing the effects of air pollution by removing sulphur dioxide, ozone, nitrogen oxides and particulates and reducing storm water run-off and soil erosion, acting as carbon sinks and producing oxygen; reducing energy consumption through moderation of the local climate by providing shelter and shade and reducing glare, reflection and wind speeds. They can provide screening and privacy or emphasize views and architecture. They provide a wide range of wildlife habitats

- the health and wellbeing of our community – by providing shade from harmful ultra-violet radiation and improving the visual quality of our landscape and our sense of wellbeing. Studies have shown that the calming effect of trees can reduce stress levels and improve recovery time after surgery. Trees and woodlands provide opportunities for recreation and education

273.

Much of the tree cover in the urban areas is in a critical condition and there is little or no replacement planting for over-mature trees in decline. Infill development has often reduced the space available for planting large tree species. In addition, new tree planting takes many years to mature. The management and retention of significant trees is therefore pressing.

274.

Bath & North East Somerset has a duty under the Town and Country Planning Act 1990 to ensure tree and woodland preservation wherever it is appropriate. The Council will continue to protect trees and woodlands through Tree Preservation Orders (TPOs) as appropriate. There is also a level of protection afforded to trees in conservation areas (CAs). However there are many trees of value outside these designations and careful consideration should be given to the removal of any tree.

275.

Applicants will be expected to refer to the latest British Standards BS 5837 best practice guidance which provides and recommendations on assessing the quality and contribution of trees on and adjacent to sites. The development of a trees and woodland strategy would further assist in providing more bespoke guidance to developers and other stakeholders in Bath & North East Somerset.

276.

Policy NE6 seeks to protect the District's trees and woodland from the adverse impact of development by setting out criteria against which proposals will be assessed.

POLICY NE6: Trees And Woodland Conservation

1 Development will only be permitted where:

a it seeks to avoid any adverse impact on trees and woodlands of wildlife, landscape, historic, amenity, productive or cultural value; and

b it includes the appropriate retention and new planting of trees and woodlands; and

2 If it is demonstrated that an adverse impact on trees is unavoidable to allow for appropriate development, compensatory provision will be made in accordance with guidance in the Planning Obligations SPD (or successor publication) on replacement tree planting.

3 Development proposals directly or indirectly affecting ancient woodland or ancient trees will not be permitted

277.

Supplementary Planning Documents and Guidance and other relevant guidance will be used to guide decisions-making on proposals for development. This includes:

- Trees and Design Action Group (TDAG) best practice guides including Trees in the Townscape, a Guide for Decision Makers (2012)
- Green Infrastructure Strategy (March 2013)
- Planning Obligations SPD
- City of Bath World Heritage Site Setting SPD (August 2013)
- Conservation Area Statements and Appraisals

GREEN INFRASTRUCTURE

Context

278.

The concept of green infrastructure (GI) is now firmly embedded in national policy with the NPPF requiring local planning authorities to set out a strategic approach in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure. It defines green infrastructure as a *network of multi-functional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities.*

279.

Green Infrastructure (GI) is a 'network of multi-functional green space, rural and urban, which is capable of delivering a wide range of environmental and quality of life benefits for local communities' (NPPF). The wider benefits of GI for B&NES will be set out in the Council's Green Infrastructure Strategy (see below).

280.

A well-designed, managed and integrated network of GI provides a wide range of direct and indirect benefits to people, places and wildlife. Where this is linked with good public access and recreational opportunities it provides invaluable assets for developing and supporting healthy, happy and vibrant local communities. This includes a greater sense of community, improved health and well-being and also in harnessing, sustaining managing the natural environment it will deliver services that are essential to quality of life. It will provide local solutions to mitigate and adapt to climate change. GI can also help local responses to sustainable travel, wildlife habitats, local food production, sustainable water management including use of sustainable drainage and conserving or enhancing sense of place, landscape character, historical and cultural features. It can deliver economic benefits and opportunities, assisting is a positive factor in eco-tourism, business location and investment decisions.

281.

B&NES already has a wealth of existing green assets including open green spaces, street trees and woodland, other natural habitats, recreational routes, historic landscape, allotments and waterways such as the Kennet and Avon canal. However, the concept of GI looks beyond existing designations, seeking opportunities to enhance the physical and functional connectivity of assets, and to extend the benefits for the community and make them much more accessible to people and wildlife.

282.

B&NES Strategic GI network diagram (see Diagram 6) is illustrative and shows a strategic overview of existing GI assets and some of the key opportunities. In the rural areas the network is based around the key recreational routes, river corridors, existing networks of wildlife sites and Strategic Nature Areas (SNAs). SNAs represent the most important areas for the conservation, expansion and restoration of important habitats. The Strategic GI corridors indicate functioning networks for recreation and biodiversity.

283.

In urban areas the network is influenced by the existing urban form and function, but GI links through and within urban areas are an integral part of creating sustainable communities. Existing GI assets need to be protected and enhanced to achieve their full value at local and District levels. The River corridor through Bath and beyond is a key GI asset that requires a "whole river" approach to realise its full potential as a multifunctional green corridor. The Placemaking Plan will set out how new developments can contribute effectively to green infrastructure.

284.

The Council's adopted Green Infrastructure Strategy was developed within the sub-regional context to ensure that cross-boundary GI issues are addressed. As well as identifying the existing network, assets and opportunities for the improvement and creation of new GI, the Green Infrastructure Strategy will ensure that GI is delivered, maintained and managed sustainably and creatively well into the future.

POLICY **CP7 Green** **infrastructure**

The integrity, multi-functionality, quality and connectivity of the strategic Green Infrastructure (GI) network will be **maintained, protected, and enhanced and managed**. Opportunities will be taken to connect with, improve and extend the network. Existing and new GI must be planned, delivered and managed as an integral part of creating sustainable communities.

Delivery

The Council has a central role in the provision, delivery and planning of GI through its role as local planning authority and direct provider of significant areas of open spaces. It will also work in partnership with key public and private bodies, local communities and the voluntary sector to protect and enhance the GI network and ensure a strategic approach is taken.

The impact of new development on GI will be assessed through the Development Management process. The Council's adopted GI Strategy sets out further guidance as to how GI principles should be applied to development proposals including provision of major infrastructure improvements. Delivery will also be through the planning process by integrating green infrastructure principles into the Placemaking Plan and other Local Plan documents.

Context

285. Core Strategy Policy CP7 'Green Infrastructure' already sets out a requirement to protect and enhance a strategic green infrastructure network across the district. Policy CP13 Infrastructure seeks to ensure that all new developments are supported by the necessary infrastructure, including green infrastructure.

286. This part of the plan provides the mechanism to develop a more detailed policy framework, setting out clear requirements for developers to ensure that GI is delivered as part of the growth in the district.

287. GI is a key component of sustainable development, fundamental to creating successful places and should be central to the design of new developments. The GI approach requires an assessment of existing GI assets within and adjoining the development site and assessment of the function the site provides within and its linkages to, the wider GI network. This should bring together the more specific assessment based information already required to comply with a whole range of related policies (including landscape, ecology, ecosystem services, built heritage, outdoor access and recreation (e.g. cycling and walking), green spaces, Sustainable urban Drainage Systems(SuD)s, trees and woodlands, climate change, local food etc.). The purpose of this is to generate a multifunctional, connected and added value solution to achieve multiple environmental, social and economic benefits.

288. The GI principles, delivery aims and objectives, set out in the Green Infrastructure Strategy need to be embedded in development proposals of all scales. The Council is maintaining a working base of green infrastructure asset and opportunity maps at strategic, urban and parish/ward scales, and developers can use these and State of the Environment mapping (2015) being undertaken by the West of England Nature Partnership (WENP), as a starting point for GI assessments. For the purposes of the Placemaking Plan:

- Strategic Green Infrastructure Corridors are made up of the 'project sites' identified in the Green Infrastructure Strategy, strategic GI features (e.g. off-road national cycle routes, promoted footpaths) and ecological networks. Strategic GI corridors are shown on the Policies Map. The ambition for the Placemaking Plan is to protect the value, integrity and to facilitate the multi-functional benefits of these strategic corridors.

- Green Infrastructure assets comprise open spaces; parks and gardens; allotments; woodlands, street trees, green roofs, fields, ponds, meadows as well as 'green'/off road footpaths; cycleways and waterways. Basic GI asset maps will be provided on the Council's website. These will provide the broad context and starting point for the production of detailed GI asset plans required by Policy NE1. The ambition for the Placemaking Plan is to increase the benefit and connectivity of these assets.

289. More details will be made available on the Green Infrastructure webpages www.bathnes.gov.uk/greeninfrastructure.

290. Policy NE1 seeks to ensure every opportunity is taken to safeguard and enhance the GI network through development proposals.

POLICY NE1: Development And Green Infrastructure

1 Within the context of Policy CP7 development will be permitted provided:

a it can be demonstrated that opportunities have been maximised to design Green Infrastructure (GI) into the proposed development;

b it does not adversely affect the integrity and value of strategic GI corridors;

c the scheme makes a positive contribution to the GI network through the creation, enhancement and management of new, and existing GI assets; and

2 Proposals for major developments should also be accompanied by:

a a plan of the existing green infrastructure assets within and around the development site; and

b a GI “proposal” demonstrating how GI has been incorporated into the scheme in order to increase function and improve connectivity of GI assets including links to existing the local and strategic networks.

3 Developers will be required to address GI in any submitted site Masterplan which as a minimum fulfils the requirements of clauses 1) and 2) above.

291.

Developers will be expected to provide sufficient information with their application to ensure Green Infrastructure has been properly considered in drawing up a scheme. The Design and Access Statement will be amended to include Green Infrastructure.

GREEN BELT

292.

Green Belts are designated primarily in order to prevent urban sprawl by keeping land permanently open. As such they help to shape patterns of urban development, protect the countryside and provide opportunities for outdoor sport and recreation. Within B&NES the Green Belt also plays a vital role in maintaining the setting of the World Heritage Site of Bath and the surrounding villages. It is also important in preventing the coalescence of these villages with the city.

293.

The purposes and objectives of Green Belt within B&NES are summarised below and generally reflect advice set out in national policy.

294.

Core Policy CP8 conforms with national policy which also states that the general extent and detailed boundaries of the Green Belt should be altered only exceptionally. The Core Strategy retains the general extent of the Green Belt in B&NES other than the removal of land from the Green Belt for development on the edge of Bath and Keynsham and at Whitchurch as set out in Policy DW1 and Policies B3A, KE3A, KE3B, KE4 and RA5. The Placemaking Plan provides the opportunity for a review of the inner detailed boundary, such as to address anomalies. In accordance with the NPPF Green Belt boundaries will only be altered in exceptional circumstances.

295.

In altering the Green Belt and allocating strategic sites for development and in response to the NPPF paragraph 85, the need to identify safeguarded land to meet longer term development requirements has been considered. At Odd Down on the edge of Bath environmental sensitivity means that there is no scope to identify safeguarded land. It is also considered there is no scope to identify safeguarded land at south west Keynsham. However, land is safeguarded for development East of Keynsham. At Whitchurch the need for and scope to identify safeguarded land will be considered as part of the Core Strategy review.

296.

In light of the opportunities for development in the plan period, most of the urban area of Keynsham continues to be excluded from the Green Belt and a revised inner boundary is defined on the Policies Map. There are a number of villages which meet the requirements of national policy in the NPPF and continue to be excluded from the Green Belt as established in the Bath & North East Somerset Local Plan. Given the overall level of housing required during the plan period and the spatial strategy for meeting this requirement it is not considered that exceptional circumstances exist to warrant changing the Inset boundaries for these villages. Some sites may come forward in the Green Belt under the Government's proposals for Community Right to Build.

297.

Within the Green Belt a number of Major Existing Developed Sites (MEDS) are defined on the Policies Map. Within the B&NES Local Plan Policy GB.3 allows for limited redevelopment or infill which does not harm the openness of the Green Belt or affect the purposes of including land within it. Within the context of national policy the Council will, through the Placemaking Plan, be reviewing whether MEDS should continue to be designated and, if so, the sites to be designated and their boundaries.

POLICY CP8 Green Belt

The general extent of the Green Belt is set out on the Core Strategy Key Diagram. The detailed boundaries and inset villages are defined on the Policies Map. The openness of the Green Belt will be protected from inappropriate development in accordance with national planning policy.

Delivery:

Delivery will be through the Development Management process. The Existing Buildings in the Green Belt SPD will continue to guide decisions on proposals within the Green Belt.

Table 8 – Bristol/Bath Green Belt within Bath and North East Somerset

Purposes of including land in the Green Belt:	Objectives for the use of land in the Green Belt:
<p>1 To check the unrestricted sprawl of Bath and Bristol.</p>	<p>1 To provide opportunities for access to the open countryside for the urban populations of Bath, Bristol, Keynsham and Norton Radstock.</p>
<p>2 To prevent the merging of Bristol, Keynsham, Salford and Bath.</p>	<p>2 To provide opportunities for outdoor sport and outdoor recreation near Bath, Bristol and Keynsham.</p>
<p>3 To assist in safeguarding the countryside from encroachment.</p>	<p>3 To retain attractive landscapes and enhance landscapes.</p>
<p>4 To preserve the setting and special character of Bath.</p>	<p>4 To improve damaged or derelict land.</p>
<p>5 To assist in urban regeneration of Bath and Bristol by encouraging the recycling of derelict and other urban land.</p>	<p>5 To secure nature conservation interests.</p>
<p>To preserve the individual character, identity and setting of Keynsham and the villages and hamlets within the Green Belt.</p>	<p>To retain land in agricultural, forestry and related uses.</p>

Detailed Green Belt boundary

298.

The Core Strategy sets out the strategic approach to the Green Belt through Policy CP8 to reflect national policy. As a significant proportion of the District lies within designated Green Belt development needs to be carefully managed and only appropriate uses may be permitted, unless very special circumstances can be demonstrated where the harm by reasons of inappropriateness, to the openness and the purposes of the Green Belt is clearly outweighed by other considerations.

Policy Aims

- Ensure that the Green Belt is protected from inappropriate development and kept permanently open

299.

Through the Core Strategy it has been established that there are no exceptional circumstances to warrant altering the Green Belt boundary to provide for development opportunities other than at the four allocated Strategic Sites.

300.

It is still Government policy to apply strict control to development in Green Belts and the NPPF states that the construction of new buildings in the Green Belt should be regarded as inappropriate. Exceptions to this include 'previously developed sites' (NPPF, para 89). As there is no longer a requirement to define the boundary of a major existing developed site (MEDS) in the Green Belt (within which development would be acceptable), the MEDS boundaries previously defined by the B&NES Local Plan (2007) have been removed.

Visual amenities of the Green Belt

300.

The NPPF asks local planning authorities to retain and enhance visual amenity. On the basis that there is little guidance in national policy on safeguarding visual amenity of the Green Belt it is important that the current level of policy protection is maintained through Policy GB1.

POLICY GB1: Visual Amenities Of The Green Belt

Development within or conspicuous from the Green Belt should not prejudice but seek to enhance the visual amenities of the Green Belt by reason of its siting, design or materials used for its construction.

Development in villages within the Green Belt

300.

There are a number of settlements in the District that are washed over by the Green Belt. These are:

Chew Magna, Chew Stoke, Claverton, Combe Hay, Corston, Englishcombe, Freshford, Hinton Charterhouse, Kelston, Marksbury, Monkton Combe, Newton St. Loe, Pensford, Priston, Shoscombe, South Stoke, Stanton Drew (including Upper Stanton Drew and Highfields), Tunley, Upper Swainswick, and Wellow.

301.

The NPPF confirms that although the construction of new buildings is regarded as inappropriate development in Green Belt, limited infilling in villages is considered an exception to this policy.

302.

The Core Strategy defines 'infilling' in relation to housing as the filling of small gaps within existing development e.g. the building of one or two houses on a small vacant plot in an otherwise extensively built up frontage, the plot generally being surrounded on at least three sides by developed sites or roads.

303.

There is no longer any specific reference to the need to define 'infill boundaries' or distinction made between residential and other developments in this context. Nevertheless, Housing Development Boundaries continue to be defined for those washed over Green Belt villages in which infilling for housing development would be acceptable and to help avoid dispute over whether particular sites are covered by infill policies and provide certainty as to where residential development would be acceptable in Green Belt settlements.

POLICY GB2: Development In Green Belt Villages

Development in villages in the Green Belt will not be permitted unless it is limited to infilling and in the case of residential development the proposal is within the defined Housing Development Boundary.

Extensions and alterations to buildings in the Green Belt

304.

The NPPF will allow as an exception to Green Belt the extension or alteration of a building in the Green Belt, not just dwellings, provided that it does not result in disproportionate additions over and above the size of the original building.

305.

However, given the significant number of householder applications in the Green Belt the Council feels justified in continuing the approach that where planning permission is required to extend buildings a balance should be taken between the accommodation needs of householders and business against the desire to avoid the gradual erosion of the countryside and identity and character of settlements, contrary to the purposes of the Green Belt.

306.

The Existing Dwellings in the Green Belt SPD (2008) provides further information and guidance on the approach the Council will take in relation to extensions to dwellings in the Green Belt and the circumstances under which replacement dwellings will be acceptable. This SPD will need revising in the light of changes to national policy.

POLICY GB3: Extensions And Alterations To Buildings In The Green Belt

Proposals to extend a building in the Green Belt will only be permitted provided they would not:

- i** represent a disproportionate addition over and above the size of the original building; or
- ii** contribute to a deterioration in rural character as a result of the cumulative effect of building extensions.

Replacement buildings in the Green Belt

307.

NPPF also takes a more flexible approach than previous Local Plans have taken in considering proposals for the replacement or rebuilding existing dwellings in the Green Belt and will allow the replacement of a building (not just a dwelling), provided the new building is in the same use and not materially larger than the one it replaces.

POLLUTION, CONTAMINATION AND SAFETY

308.

The NPPF clarifies the specific responsibilities of the planning system; that it has a role to play in preventing both new and existing development from contributing to or being put at unacceptable risk from, or being adversely affected by unacceptable levels of soil, air, water or noise pollution.

Overarching policy aims

- Minimise use of non-renewable resources and promote the reuse of existing structures and materials
- Minimise land contamination and soil degradation
- Minimise/mitigate against effects of pollution (e.g. Air quality, noise, land contamination, light, groundwater)
- Protect and enhance the quality of the underlying groundwater or surface water

Pollution and nuisance

309.

The control of pollution is governed by the Environmental Protection Act 1990 and related legislation. A number of regulatory authorities have a role in pollution control, principally the Environment Agency and Local Planning Authorities. Decisions will be determined in accordance with the relevant expert advice.

310.

Policy PCS1 embodies the 'precautionary principle'. This requires that where there is significant risk of damage to the environment, pollution controls will take into account the need to prevent or limit harm, even where scientific knowledge is not conclusive. The principle applies particularly where there are good grounds for judging that action taken promptly at comparatively low cost may avoid more costly damage later, or that irreversible effects may follow if action is delayed.

POLICY PCS1: Pollution And Nuisance

Development will only be permitted providing there is:

- 1 no unacceptable risk from existing or potential sources of pollution or nuisance on the development, or
- 2 no unacceptable risks of pollution to other existing or proposed land uses arising from the proposal

Noise and vibration

311.

The Planning system has a role in seeking to ensure that new noise sensitive development such as housing and schools is not located close to existing sources of noise, including industrial uses and noise generated by vehicles and other forms of transport that would lead to nuisance. Also it should ensure that potentially noise creating uses such as some industrial processes or some recreational activities are not located where they would be likely to cause nuisance. This approach is reflected in Policy PCS2.

312.

The NPPF states that planning policies and decisions should aim to avoid noise from giving rise to significant adverse impacts on health and quality of life as a result of new development. It should take account of the acoustic environment and in doing so consider:

- whether or not a significant adverse effect is occurring or likely to occur;
- whether or not an adverse effect is occurring or likely to occur; and
- whether or not a good standard of amenity can be achieved.

313.

The Planning Practice Guidance also provides a wealth of guidance on dealing with noise related development and further information is available in the 'Explanatory Note to the Noise Policy Statement for England' (DEFRA).

POLICY PCS2: Noise And Vibration

1 Development will only be permitted where it does not cause to unacceptable increases in levels of noise and/or vibration that would have an adverse effect on health and quality of life, the natural or built environment or general amenity unless this can be minimised or mitigated to an acceptable level.

2 Noise-sensitive development should avoid locations wherever possible where the occupants would be subject to unacceptable levels of noise or vibration from an existing noise source.

Air quality

314.

There has been an increasing recognition that air pollution can be a cause of serious health problems, such as respiratory illnesses. In this respect air quality continues to be an issue for parts of the District and Air Quality Management Area (AQMAs) have been designated in Bath, Keynsham and Saltford. Further information on these AQMAs is available on the Council's website: <http://www.bathnes.gov.uk/services/environment/pollution/air-quality>

315.

Local Authorities are required under Part IV of the Environment Act 1995 to periodically review and assess the air quality in their area. Although the control of pollution is governed by other legislation, planning has a role to play in separating potentially polluting land uses from other existing or proposed land uses and in ensuring that new development is not allowed where it would exacerbate already poor air quality conditions.

316.

National Planning Guidance spells out the following matters that local authorities may need to consider:

- the potential cumulative impact of a number of smaller developments on air quality as well as the effect of more substantial developments;
- the impact of point sources of air pollution (pollution that originates from one place); and,

- ways in which new development would be appropriate in locations where air quality is or likely to be a concern and not give rise to unacceptable risks from pollution. This could be through, for example, identifying measures for offsetting the impact on air quality arising from new development including supporting measures in an air quality action plan or low emissions strategy where applicable.

317.

In considering the effects of the development on the local air quality, the Council will use the latest Government regulations and guidelines to determine the suitability of the proposal. Policy PCS3 seeks to ensure that the effects of a development on the local air quality are properly considered.

318.

Latest guidance in the NPPF states that planning decisions should ensure that any new development in Air Quality Management Areas is consistent with the local air quality action plan. An Action Plan for Bath was prepared in 2011. The Council is also developing Action Plans for Keynsham and Saltford as they also have Air Quality Management Areas

POLICY PCS3: Air Quality

1 Development will only be permitted where the proposal:

a does not give rise to polluting emissions which have an unacceptable adverse impact on air quality, health, the natural (in particular designated wildlife sites) or built environment or local amenity of existing or proposed uses from air polluting activities, or

b is not located where it would be at unacceptable risk from, or be adversely affected by existing sources of odour, dust and /or other forms of air pollution

2 New development located within an Air Quality Management Area should be consistent with the local air quality action plan.

Where an air quality assessment is necessary to support an application, it should be proportionate to the nature and scale of development proposed and the level of concern about air quality.

Major hazards and hazardous substances

319.

The Planning (Hazardous Substances) Act, 1990 and National Planning Policy Guidance describe the role of the planning system in controlling the location and use of substances and processes which are potential hazards to public safety such as some industrial processes, gas pipelines and the storage of explosives. National planning policy requires local planning authorities to have regard to the prevention of major accidents and limiting their consequences when preparing a Local Plan.

320.

Applicants are expected to indicate as part of any application whether hazardous substances will be used, stored or manufactured on the site. HSE is a statutory consultee on planning applications for Hazardous Substances Consent (HSC) and developments near major hazard installations and pipelines. The applicant will be expected to demonstrate to the satisfaction of the Council and the HSE that adequate safety precautions have been taken. The HSE apply risk criteria to the operation concerned to determine if a development proposal would be likely to be put at unacceptable risk as a result of proximity to a hazard. In the District there are a number of gas pipelines which are defined as hazards.

321.

Therefore within the context of national planning policy guidance, Policy PCS4 sets out criteria for assessing applications in controlling the location and use of substances and processes which are potential in the interests of public safety and amenity. It outlines the key issues to be taken into account in the consideration of applications for hazardous substances consent and developments involving the use of hazardous substances.

POLICY PCS4: Hazardous Substances

Applications for hazardous substances consent, and developments involving the use, manufacture, storage or production of hazardous substances, will only be permitted where:

1 The proposal is sited at an appropriate distance from existing and proposed residential areas, areas of public use and areas of particular natural sensitivity, in order to maintain safety and amenity;

2 There would be no unacceptable risk to those who potentially use developments that would fall within any associated safety zones identified by the Health and Safety Executive and to protected wildlife sites;

3 The hazardous substances would be stored in a way that does not give rise to harm to the environment that cannot be minimised.

Development in close proximity to an existing hazard will only be permitted where there is no unacceptable risk to public safety and amenity.

322.

Further guidance includes:

- The Planning (Hazardous Substances) Act 1990
- The Planning (Hazardous Substances) (Amendment) (England) Regulations 2009
- HSE's land use planning methodology
- pre-application advice on proposed developments on sites which lie near to a major hazard site or a major accident hazard pipeline is provided on the HSE's website: <http://www.hsl.gov.uk/products/lupa>
- The Town and Country Planning (Local Planning) (England) Regulations 2012 – Regulation 10

Contamination

323.

Any land contaminated with hazardous or toxic materials potentially is a serious cause of pollution. Contamination can result from previous uses of the site, for example, industrial processes involving chemicals or closed waste disposal sites where landfill gas and leachate are still present.

324.

The NPPF places the onus with the developer and/or landowner for securing a safe land/development. It also requires a risk assessment of land potentially affected by contamination and expects all investigations to be undertaken in accordance with established practices such as BS10175 (2001) 'Code of Practice for the Investigation of Potentially Contaminated Sites'.

325.

Whilst Part 2A of the Environmental Protection Act 1990 provides a risk based approach to the identification and remediation of land where contamination poses an unacceptable risk to human health or the environment, it does not take into account future uses which might need planning permission. The Council needs to ensure the implications of contamination for a new development not addressed by other regimes are properly considered through the planning system. Policy PCS5 provides the framework for considering planning applications where land contamination issues are involved. There is also a wealth of information of land affected by contamination in the Planning Practice Guidance and an overview contaminated land produced on the GOV.UK website (<https://www.gov.uk/contaminated-land/overview>) which should also be referred to before submitting a planning application:

POLICY PCS5: Contamination

Development will only be permitted on land either known to be or strongly suspected of being contaminated, or where development may result in the release of contaminants from adjoining land, provided:

- 1 the proposal would not cause significant harm or risk of significant harm to health or the environment or cause pollution of any watercourse, water body or aquifer
- 2 remediation measures are put in place as appropriate, and
- 3 any identified potential harm can be suitably mitigated

The onus will be with the developer and/or landowner for securing a safe development.

Unstable land

326.

The geology of Bath and North East Somerset and its history of surface and underground mineral extraction mean that land in certain areas may be unstable, for example, at Combe Down in Bath and locations within the former Somerset coalfield.

327.

National policy requires a risk assessment of land potentially affected by land instability and that site investigation and surveys need to be carried out before land in these areas is developed. Again the onus is on developers to carry out investigative work to assess whether a proposed development would be affected by land instability and to set out any necessary stabilisation measures.

328.

The Planning Practice Guidance on the issue of land stability, points to where sources of information are held such as with the British Geological Survey (BGS) and the role the Coal Authority plays in matters of land instability. With the District's history of coal mining, it is particularly important that mining legacy matters including entries and are properly evaluated to ensure proposals not lead to future public safety hazards. The 'Development High Risk Area' in respect of the coal mining legacy is defined on the Policies Map within which submission of a Coal Mining Risk Assessment would be necessary to support a development proposal.

329.

Policy PCS6 seeks to ensure that sites are suitable for the new use taking account of ground conditions and land instability and the need for remediation as appropriate.

POLICY PCS6: Unstable Land

Where there is a risk that the land may be unstable, development will only be permitted where it is demonstrated that:

- 1 the site is capable of being developed without adversely affecting the stability of the development or that of neighbouring land; and
- 2 any remedial and/or precautionary measures proposed as a result of the development do not adversely affect local amenities and/or environmental interests.

The onus will be with the developer and/or landowner for securing a safe development and for submitting the necessary Risk Assessment(s) to support the proposal.

Safeguarding water resources

330.

The adequacy of existing water supply is likely to be a key factor in determining the location and timing of development. New developments should be located in ways that minimise or eliminate the environmental impact of additional demand for water. The NPPF places emphasis on ensuring an adequate water supply is in place. The Planning Practice Guidance also provides general advice on water supply, wastewater and water quality.

Water Source Protection Zones

331.

Groundwater Source Protection Areas have been defined by the Environment Agency in order to prevent contamination of groundwater. These areas feed springs and watercourses from where water is collected for public supply and agriculture. The polluting of these catchment areas could pose a serious risk to public health. In Bath and North East Somerset these are concentrated in the Chew Valley and the northern edge of the Mendip Hills and in areas to the north and south of Bath. These areas feed springs and watercourses used for public drinking water supply. The polluting of these catchment areas could pose a serious risk to public health.

332.

This approach is consistent with advice in the Planning Practice Guidance which reinforces the controls of other bodies such as the Environment Agency, ensuring that early consideration is given to development proposals that may affect local groundwater quality. Water Source Protection Areas are now more commonly referred to as Source Protection Zones (SPZs) by the Environment Agency who holds all up to date information.

333.

Consideration should be given to any possible impact on groundwater recharge, flows and levels. If it is anticipated that works may penetrate the natural winter water table then the impact of such works will need to be assessed and discussed with the Environment Agency. If detrimental consequences of the water environment are likely, agreed mitigation measures will be necessary.

334.

The Environment Agency divides groundwater source catchments into three zones: Inner Zone, Outer Zone, and Total Catchment. Further more detailed information is available on the Environment Agency's website and developers will be able to search this by postcode so see if whether their site is in a Source Protection Zones at the following link (and clicking on the 'Groundwater' icon): http://maps.environment-agency.gov.uk/wiyby/wiybyController?ep=maptopics&lang=_e

335.

Policy PCS7 will help ensure the protection of Groundwater Source Protection Zones from the adverse impacts of development, and refers the applicant to the Environment Agency's website as SPZ's are altered and updated on a regular basis.

POLICY PCS7: Water Source Protection Zones

1 Development proposals that would adversely affect the quality or quantity of water resources by means of pollution and/or derogation of the resource will not be permitted.

2 Applicants will be expected to undertake robust assessments to support applications affecting Groundwater Source Protection Zones as defined by the Environment Agency.

Foul sewage infrastructure

336.

The availability of foul and surface water sewerage infrastructure is a material consideration in deciding planning applications. Wessex Water Plc is the water company which provides these services to the District and their advice should be sought before development proposals are submitted. New development can create additional demands for sewage disposal. Some villages are not served by mains sewerage, others require improvements. In the case of non-mains villages new developments may have to be served by cess pits or septic tanks which are potential sources of pollution.

337.

Policy SU1 in the Responding to Climate Change section sets out the policy context for dealing with surface water drainage through the use of Sustainable Drainage Systems (SuDS). Policy PCS7A seeks to ensure development is only permitted where there is adequate foul sewage provision. This approach complements Policy CP13 in requiring the timely provision of required infrastructure. Where proposals could have an adverse impact on sensitive watercourses developers should incorporate adequate mitigation measures in discussion with Wessex Water and the Environment Agency/Natural England. This is to ensure compliance with the requirements of the EU Water Framework and Habitats Directives. Further advice is available from the Environment Agency, Wessex Water and Natural England.

POLICY PCS7A: Foul Sewage Infrastructure

1 Development will only be permitted where adequate sewage treatment facilities are available or where suitable arrangements are made for their provision.

2 Developments which may result in increased nutrient load to sensitive watercourses should incorporate adequate mitigation measures in compliance with the requirements of the EU Water Framework and Habitats Directives.

3 New developments will be expected to connect to the public sewer system and new sewers and associated infrastructure will be constructed to a standard adoptable by Wessex Water.

338. Further information includes:

- Sewage treatment and disposal where there is no foul sewer, PPG4, Environment Agency (2006)
- Guidance notes and procedures on the Wessex Water website:
<https://www.wessexwater.co.uk/>

Bath Hot Springs

339. The Hot Springs are one of the six key attributes of the City of Bath World Heritage Site. Since Roman times with the development of 'Aquae Sulis' as a retreat for health therapy, worship and relaxation, Bath's Hot Springs have been the centre of social, economic and cultural developments in Bath. Settlement grew up around this resource which has culminated in the modern City of Bath. The Springs now attract many visitors annually with the opening of the Thermae Bath Spa.

340. There are three Hot Springs in the centre of Bath: the Kings Springs within the Roman Bath complex, the Cross Bath Spring, and the Hetling Spring in Hot Bath Street. Together they produce around 1.3 million litres of mineral-rich thermal water per day with a temperature of between 41 and 46°C. These thermal waters arise from the Carboniferous Limestone via fissures in the overlying layers (a layer of alluvium, successive layers of Lias Clay and limestone and Triassic Mercia mudstone) and appear as springs on the surface.

341. The Council is responsible for the protection of the Hot Springs in Bath. The Springs are protected by Section 33 of the County of Avon Act 1982 which specifies three control zones within which the depths of excavations is controlled.

342. As the Bath Hot Springs are inextricably linked with the World Heritage Site, Core Strategy Policy B4 applies to their general protection. Policy PCS8 seeks to ensure that both the quality and quantity of the groundwater source is protected from development that is likely to have any adverse effect on this resource. It is also important to have this policy in place should the Council receive any planning applications energy mineral exploration and extraction which may impact on Hot Springs and their sources (see Policy M5). The Environment Agency must also be consulted on applications which are likely to have an impact on the Hot Springs.

POLICY PCS8: Bath Hot Springs

Development that has any adverse impact on the quality or yield of the Bath Hot Springs will not be permitted.

BUILDING STRONG AND VIBRANT COMMUNITIES

MEETING HOUSING NEEDS

343.

The NPPF states that local planning authorities should:

- Meet Local Housing needs (including affordable housing)
- Provide housing to meet the community's needs (para. 7)
- Set out an approach to housing density to reflect local circumstances (para. 47)
- Plan for a mix of housing types (including those wishing to build their own homes i.e. self build, families, older people and people with disabilities) (para. 50)
- Bring housing and buildings back into residential use (para. 51)

344.

The Core Strategy Policy CP9 covers the provision of affordable housing. In addition, the Core Strategy includes policy CP10 on Housing Mix, and states that the accommodation needs of older people in particular will be considered in the Placemaking Plan (including considering specific allocations).

345.

The broad aims of the emerging policy approach to housing are as follows:

- Ensure that housing provision meets demonstrable housing needs including housing for elderly people, special needs accommodation and self-build
- Ensure that density for residential development is appropriate given housing needs and location
- Ensure that residential development is socially inclusive and contributes towards health and well-being
- Protect the existing housing stock
- Ensure that empty homes are brought back into use
- Seek to address student accommodation needs arising from Universities expansion whilst not prejudicing other economic, environmental and social objectives from being achieved

Affordable Housing

346.

This policy sets out when affordable housing provision will be required and indicates the proportions which will be sought. It is the responsibility of each local authority to establish the right level of housing provision in their area and to identify a long term supply of housing. This includes defining the level of affordable housing that is appropriate taking account of evidence in relation to local housing need and viability. The requirements of this policy will replace Local Plan Policy HG.8

347.

In order to understand the local housing market and assess current and future housing requirements and need for Bath & North East Somerset the Council commissioned a SHMA which was published in 2013. The SHMA shows that the need for affordable housing in B&NES is high and that the affordability gap between local incomes and market house prices is very wide.

348.

The SHMA shows that an increasing proportion of the total dwelling stock is accounted for by the private rented sector. The SHMA estimates that around 36% of the requirement for overall housing between 2011 and 2031 is for affordable homes. The SHMA assumes that the contribution to the provision of housing needs from private rented accommodation where occupiers are receiving

housing benefit will continue at a similar scale in the future. If this contribution were to significantly fall, the need for affordable housing would increase.

349.

In making provision for affordable housing further guidance on the tenure split between social and affordable rent and intermediate housing that will be sought by the Council and the circumstances in which different tenures will be acceptable will be set out in the Planning Obligations SPD.

350.

To understand the capacity of private development to deliver affordable housing the Council commissioned a viability study. The B&NES Viability Study (Three Dragons, July 2010) and the B&NES Viability Update (Dec 2012) have taken account of market prospects and a range of cost implications including other Section 106 obligations in order to create a baseline level of affordable housing that will be viable in the majority of schemes without recourse for public subsidy.

351.

The study has identified some geographical variance in viability across the District. This supports geographical variation in the proportion of affordable housing that should be sought (as outlined in the table below).

Table 7 – Geographic split for Affordable Housing

Targets	Sub-markets	Postcode
AH Area 1 40%	Prime Bath	BA1 2, BA11, BA2 4
	Bath North and East	BA1 5, BA1 6, BA2 6, BA1 7, SN14 8 and SN13 8
	Bath Rural Hinterland	BA1 9, BA1 8, BA2 7, BA2 9, BA2 0, BA152 and BS30 6
AH Area 2 30%	Bath North and West	BA1 4 and BA1 3
	Bath South	BA2 3, BA2 2, BA2 1, BA2 5
	Keynsham and Saltford	BS31 1, BS31 2, BS31 3, BS15 3, BS4 4 and BS14 8

POLICY CP9 Affordable Housing

Large sites

Affordable housing will be required as on-site provision in developments of 10 dwellings or 0.5 hectare and above (the lower threshold applies). The following percentage targets will be sought:

- 40% in Prime Bath, Bath North and East, Bath Rural Hinterland;
- 30% in Bath North and West, Bath South, Keynsham and Saltford, Midsomer Norton, Westfield, Radstock, Peasedown St John, Paulton and Chew Valley.

This is on a grant free basis with the presumption that on site provision is expected.

Small sites

Residential developments on small sites from 5 to 9 dwellings or from 0.25 up to 0.49 hectare (the lower threshold applies) should provide either on site provision or an appropriate financial contribution towards the provision of affordable housing with commuted sum calculations. The target level of affordable housing for these small sites will be 20% for AH area 1 and 15% for AH area 2 half that of large sites, in order to encourage delivery.

In terms of the affordable housing on small sites, the Council will first consider if on site provision is appropriate. In some instances the Council will accept a commuted sum in lieu of on site provision. This should be agreed with housing and planning officers at an early stage.

Viability

For both large and small sites the viability of the proposed development should be taken into account, including:

- Whether grant or other public subsidy is available
- Whether there are exceptional build or other development costs
- The achievement of other planning objectives
- The tenure and size mix of the affordable housing to be provided.

Sub-division and phasing

Where it is proposed to phase development or sub-divide sites, or where only part of a site is subject to a planning application, the Council will take account of the whole of the site when determining whether it falls above or below the thresholds set out above.

Property Size and Mix

Residential developments delivering on-site affordable housing should provide a mix of affordable housing units and contribute to the creation of mixed, balanced and inclusive communities. The size and type of affordable units will be determined by the Council to reflect the identified housing needs and site suitability.

The type and size profile of the affordable housing will be guided by the Strategic Housing Market Assessment and other local housing requirements but the Council will aim for at least 60% of the affordable housing to be family accommodation including some large 4/5 bed dwellings.

Other

All affordable housing delivered through this policy should remain at an affordable price for future eligible households, in the event of any sales or staircasing affecting affordable housing unit(s) delivered through Policy CP9 then an arrangement will be made to recycle the receipts/subsidy for the provision of new alternative affordable housing located elsewhere within Bath and North East Somerset. Affordable Housing should be integrated within a development and should not be distinguishable from market housing.

Delivery

Affordable housing will be delivered in accordance with the Council's Housing Strategy or equivalent.

The quantity, tenure balance and type/size mix of the affordable housing will be agreed with the Council's Housing Enabling Team, or equivalent, through the development management process. Applicants are recommended to hold early conversations with Housing Enabling Team in order to agree the affordable housing provision and in particular the likely availability of public subsidy.

In exceptional circumstances, where the applicant has demonstrated a scheme is not viable and this has been independently validated, the Council may consider the use of alternative mechanisms to achieve the full affordable housing requirement.

Financial contributions towards affordable housing secured from development will be used to meet the housing objectives set out in the Housing Strategy. Any such contribution will contribute to a fund to assist in the delivery of additional affordable housing by supporting a scheme that would otherwise not be viable, increasing the amount of affordable housing in a scheme beyond the grant free position (up to a maximum of 45%), increasing the proportion of larger family units, assisting in the funding of older persons or supported housing or to improve the quality of the affordable housing product on offer.

Rural affordable housing

Meeting local needs for affordable housing locally

352.

The core policy on affordable housing outlines the percentage the Council is aiming for on affordable housing and the site thresholds to which they apply across the District.

353.

This policy will apply to all market housing developments across the District. Villages which meet the criteria of Policy RA1 will benefit from this policy and sites will be allocated through the Placemaking Plan. Beyond this, local need for affordable housing across the rural areas will be primarily met through the rural exceptions policy. If there are rural buildings which are no longer required for local food production, there may also be opportunities to convert them to affordable housing under the Government's emerging proposals for the 'home on the farm' scheme. Any development proposals coming forward under the Community Right to Build are to be considered separately from the rural exceptions policy.

Rural Exceptions Sites

354.

The rural exceptions policy allows the release of land that would not normally be used for housing for development of 100% affordable housing, on small sites and where there is a demonstrated local need. Robust housing needs surveys will be required to demonstrate this local need.

355.

Sites should be identified through a sequential approach which includes assessment of the economic, social and environmental impacts. Development should be appropriate in scale and character to its surroundings.

356.

It is the expectation that Parish Councils will lead this process with support from the Council and its partners.

357.

Occupancy of the development should remain for people with local connections to the parish in perpetuity. This includes residents of the parish or group of parishes, individuals with strong local links such as those having family in the parish or parishes, or who have lived there for a significant period or are employed in the area. Prioritisation of local connections will be agreed within individual S106 agreements and in accordance with housing letting guidance.

358.

In cases where the site identified through the sequential approach is financially unviable, a small proportion of market housing will be appropriate only where it can be demonstrated that the market housing is required to subsidise the affordable element. It is imperative that the majority of the scheme is affordable and that the market units are only justifiable if they facilitate the delivery of the affordable units. Developers will be required to provide a simple viability study which the Council can assess in order to establish if and how much market housing is needed.

POLICY RA4 Rural Exceptions Sites

As an exception to other policies of the Development Plan, residential development of 100% affordable housing will be permitted provided that:

- a** it meets a demonstrated local need for affordable housing
- b** the housing remains affordable in perpetuity
- c** occupancy of the affordable housing would remain, as a first priority, for those with demonstrated local connections
- d** the development is in scale and keeping with the form and character of its location
- e** the development is well related to community services and facilities

A small proportion of market housing will be appropriate only where it can be demonstrated that the market housing is essential to cross-subsidise the affordable housing and that the site would be unviable without this cross-subsidy.

Housing and Facilities for the Elderly, people with other Supported Housing or Care Needs

359. Bath & North East Somerset is facing a significant and increasing demand for housing and care to meet the needs of its ageing population. The number of people of retirement age is predicted to increase by nearly 6,000 (18.3%) by 2021. The most significant rate of growth in the local authority area's population will be in the number of people aged 85 and above: this is anticipated to have risen 23.9% by 2021.

360. In 2008, The Housing Learning and Improvement Network (LIN) in partnership with Communities and Local Government published More Choice, Greater Voice which accompanied the publication of the national Housing Strategy for Older People. More Choice, Greater Voice highlighted the anticipated expansion of the older population and made some best practice recommendations for local authority planning and commissioning teams to develop alongside housing providers. The Housing LIN suggested that future specialised accommodation for older people should be provided on a ratio of 170 units per 1,000 people aged 75. On this basis, with reference to current population projections, there will be a need for 479 units (flats/houses) of Extracare provision as well as 192 dementia specific Extracare units in B&NES by 2021.

361. The Council recognises the need to deliver a new supply of age appropriate housing to meet the changing needs of its population. Much of this demand can be met through the existing supply and the provision of good quality, well designed, adaptable new homes. However, the Council has identified that there is a significant shortfall in housing options for older and frailer people who have identified care needs, but who wish to remain independent in a home of their own.

362. Data from the 2011 Census highlights that the majority of older people in the Bath and North East Somerset area own their own homes and many of these people will want a choice of housing options when their care or mobility needs increase. The current supply of 150 Extra Care units is found in the affordable housing sector, and while this is making a valuable contribution to meeting current demand, the Council wishes to support the development of mixed tenure Extra Care in both Bath and the wider district. Delivering a range or tenure options for Extra Care will address this lack of choice.

363. Extra Care housing is the generic term for purpose designed, self-contained housing for older and disabled people with care and support available on site 24 hours a day, promotes independent living and provides a real alternative to Residential Care. People living in Extra Care hold the tenancy or lease to their own home and are encouraged to live independent lives with the benefit on site care, delivered according to assessed and eligible need: the care is the only element of the service provided within the scheme that is regulated by the Care Quality Commission (CQC), which helps distinguish C3 use from C2 residential care homes where the entirety of the scheme is regulated by the CQC.

364.

There are a number of different extra-care models currently available: however the key elements for the delivery of this service are as follows:

- Self-contained dwelling units that have been designed to meet the needs of older and/or disabled people
- Communal facilities accessible to tenants/leaseholders
- The provision of assistive technology to monitor and minimise risks to tenants/leaseholders
- 24 hour, on site care available to a) meet on-going and assessed needs and b) respond in an emergency as appropriate
- Easy accessibility to key local facilities e.g. public transport, health centres, shops, pharmacy
- High levels of Housing Management Support for tenants/leaseholders

365.

Many extra care facilities focus on the continuum of care. Some provide a mixture of sheltered and extra care provision on the same site: others (the “care village” model) provide the full continuum of care ranging from sheltered housing to nursing homes. Although these models are available in adjacent local authorities (Bristol, North Somerset), they have yet to be developed in B&NES. Within B&NES an approach which fosters a home for life model, is preferred, with support for people being able to stay within their own home.

366.

Extracare in itself is not an affordable housing tenure but C3 Extracare proposals should meet the Core Strategy requirements of CP9 for the delivery of affordable housing.

POLICY H1: Housing and facilities for the elderly, people with other supported housing or care needs

Housing and facilities for the elderly, people with other supported housing or care needs, will be permitted, where:

a The use is compatible with the locality and existing/future uses in the locality, and does not create potential conflicts with existing uses (e.g. potential for visual and noise intrusion if in a city/town centre).

b There is adequate (i) communal space (including cooking and dining areas) and (ii) garden/ outdoor space within the curtilage of the property to meet the needs of the residents. National best practice standards should be met relevant to the type of development proposed, for example development should, follow best practice identified by HAPPI 12, in particular the 10 elements critical to age-inclusive housing:

- Generous internal space standards.
- Plenty of natural light in the home and circulation spaces.
- Balconies and outdoor space, avoiding internal corridors and single-aspect flats.
- Adaptability and “care aware” design which is ready for emerging assistive technologies.
- Circulation spaces that encourage interaction and avoid an “institutional feel”.
- Shared facilities and community hubs where these are lacking in the neighbourhood.

- Plants, trees and the natural environment.
- High levels of energy efficiency, with good ventilation to avoid overheating.
- Flexible extra storage for belongings, including bicycles and mobility scooters.
- Shared external areas such as “home zones” that give priority to pedestrians.

When considering whether a proposal is C2 in use, the following criteria will be considered, alongside other material considerations:

- Built Form – scale, range of facilities and communal space
- Tenure
- Provision of meals
- Allocation and eligibility criteria, including the retention of C2 use in perpetuity – the level of care catered for and the type of care contracted for as part of the residence
- Housing and support provider model – including whether the facility is regulated by the Care and Quality Commission, or successor/ equivalent

Housing Mix

367.

This policy is aimed at ensuring that new residential development provides for a range of housing types and needs, to help support mixed and inclusive communities and to respond to demographic change.

POLICY CP10 **Housing Mix**

New housing development, both market and affordable must provide for a variety of housing types and size to accommodate a range of different households, including families, single people and low income households as evidenced by local needs assessments (e.g. B&NES Residential Review, 2007) and the Strategic Housing Market Assessments or future evidence.

The mix of housing should contribute to providing choice in tenure and housing type, having regard to the existing mix of dwellings in the locality and the character and accessibility of the location.

Housing developments will also need to contribute to the provision of homes that are suitable for the needs of older people, disabled people and those with other special needs (including supported housing projects), in a way that integrates all households into the community.

The specific accommodation needs of older people will be addressed through the Placemaking Plan, including considering the allocation of appropriate sites.

Delivery:

This policy will be implemented by the development management process, and delivered by private developers and affordable housing providers.

The affordable housing policy will also ensure that the Council can have an active role in negotiating the mix of housing provided, and seeks to have a flexible approach particularly to ensure the delivery of family housing.

Houses in Multiple Occupation

368.

A House in Multiple Occupation (HMO) is a house or flat which is occupied by three or more unrelated people who share facilities such as a kitchen or bathroom. HMOs are an important part of the local housing market, particularly within Bath, providing affordable accommodation for student, professionals and migrant workers among others.

369.

The Council exerts greater planning controls over HMOs in Bath, and in July 2013 introduced a citywide Article 4 Direction to control the future growth and geographic spread of HMOs, which operates together with Houses in Multiple Occupation Supplementary Planning Document. In response to the Article 4 Direction, a change of use from residential to C4 HMO now requires planning permission across Bath.

370.

Additional Licencing arrangements are also operated within specific parts of Bath which work alongside Mandatory Licencing to ensure that required management standards are met.

POLICY H2: Houses in Multiple Occupation

District-wide a change of use from residential (C3) to a large HMO (Sui Generis use class) will require planning permission. In Bath, a change of use from residential a small HMO (C4) will also require planning permission as there is a City-wide Article 4 Direction in place. The following criteria will be considered when determining these applications:

i If the site is within Bath, and within an area with an high concentration of existing HMO (as defined in the Houses in Multiple Occupation in Bath Supplementary Planning Document, or successor document), further changes of use to HMO use will not be supported as they will be contrary to supporting a balanced community;

ii The HMO use is incompatible with the character and amenity of established adjacent uses;

iii The HMO use significantly harms the amenity of adjoining residents through a loss of privacy, visual and noise intrusion;

iv The HMO use creates a severe transport impact;

v The HMO use results in the unacceptable loss of accommodation in a locality, in terms of mix, size and type;

vi The development prejudices the continued commercial use of ground/lower floors.

Residential Use in Existing Buildings

371.

The sub-division of existing dwellings to form smaller units or flats is a common way to increase the occupancy/density in residential areas. In addition, the conversion of non-residential buildings and the re-use of buildings for residential use is also supported, in that (where appropriate) this can boost local housing supply.

372.

B&NES has a proactive approach in terms of bringing empty homes back into use, Policy H4 sets out the circumstances in which the sub-division of existing residential properties will be acceptable.

POLICY H3: Residential Uses in Existing Buildings

The sub-division of existing dwellings will be permitted, unless:

- i The residential use creates a severe transport impact, (in a way that the existing use would not);
- ii The development does not prejudice the continued commercial use of ground/lower floors.
- iii It would lead to a form of sub-division that would harm the significance of a listed building.

The re-use of existing empty homes in continuing residential use will be strongly supported.

Self-Build & Custom Build

373.

National Policy supports the principle of self-build and Councils have a duty to understand the demand/need for self-build housing.

374.

The Council supports self-build provision as part of development sites and also as part of rural exceptions sites for affordable housing and/or community land trust mechanisms. The Placemaking Plan provides the opportunity to develop a policy to encourage self-build, although national policy inhibits a policy which require self-build accommodation. There is now a workable planning definition of self-build housing (introduced via the Government's Community Infrastructure Levy Exemption/Relief mechanism and the Custom & Self Build Act 2015).

375.

The Council has signed up to the Local Self Build Register (August, 2014) which will assist in gathering evidence of demand/need for self-build housing in the district.

POLICY H4: Self Build

The provision of self build housing will be supported, and CIL will not be charged where the scheme meets the exception criteria.

Self-build housing will be supported where the proposals are of sufficient design and sustainability merit, and in line with other policies in the Development Plan.

Retention of Existing Housing Stock

376.

The existing housing stock should be protected from change of use, where possible, given the high demand for housing. However, there will be circumstances where change of use to non-residential use or to Visitor Accommodation uses (such as a Hotel, Guesthouse or the provision of Bed and Breakfast) could be acceptable where there is Conservation or other benefits that outweigh the loss of a single dwelling.

POLICY H5: Retention of Existing Housing Stock

Development which would result in the net loss of existing residential accommodation will not be permitted unless, there are benefits that outweigh any harm, such as:

- i** There are demonstrable and substantial conservation benefits
- ii** There are demonstrable and substantial economic, social or environmental benefits
- iii** There are benefits in terms of providing visitor accommodation

Moorings

377.

The district's rivers, canals and other watercourses make an important contribution to the character of the countryside and urban areas and are often of great wildlife importance and interest supporting increasingly rare water-dependent habitats. In recent years there has been a substantial increase in boat traffic and pressure for permanent residential moorings along the river and canal corridor within the District, including instances of unauthorised mooring.

378.

There appears to have been an increase in the numbers of people opting to become boat dwellers over recent years, this is potentially due to the lack of available affordable housing in certain areas, lifestyle choice and also an increase in boat related tourism.

379.

There are approximately 633 boats on the water network in Bath and North East Somerset. More recently, the Canal & River Trust has estimated that based on previous boat movement sightings approximately 250 boats without a home mooring may not meet the new continuous cruiser (CC) boat license process (introduced April 2015), however as of September 2015 of the 633 boats sighted in the B&NES area just 34 are in the CC enforcement process. These boaters are at risk of losing their boating license if they do not meet the navigation requirements set out in the guidance for boaters without a home mooring. It is unclear why these boaters are not complying with their license requirements; there may be a range of factors, for example a lack of appropriate mooring sites, or personal choice. Some of these boaters may be traditional travelling families or technically homeless, in sub-standard, badly insulated and unsafe boats.

380.

The NPPF encourages local planning authorities to deliver a wide choice of high quality homes, widen opportunities for home ownership and create sustainable, inclusive and mixed communities. It is recognised that houseboats contribute to increasing diversity of homes within the District. The Core Strategy aims to deliver new development in sustainable locations and it is accepted that the same principle should be applied to proposals for residential and other moorings.

381.

The Council is therefore aware there is a gap in its understanding with regards to the current needs and demands of the river/canal network and a need to improve the evidence base on boaters, particularly their needs, numbers and the factors that contribute to unauthorised mooring, so that responses can be tailored and based on informed decisions. Key factors to consider and establish include:

- Whether there is a demonstrable need and/or demand for the additional moorings
- The role the planning system can play in providing for boat dwellers

- The Canal & River Trust mooring strategies, policies and legal constraints.
- How issues around Green Belt, riverside environment (wildlife, leisure, recreation), riparian owners, footpaths, access, Environment Agency's operational requirements impact on mooring.
- recognition that waterways are a form of strategic and local infrastructure performing multiple functions, such as sustainable transport, open space, land drainage and water supply, flood alleviation.
- The impact individual and cumulative development alongside canal/river may have on mooring, how this may be mitigated addressed.
- Issues surrounding an established use i.e. where mooring has been in existence for a number of years

382.

In order to address these and other river related issues, the Strategic River Group¹ is coordinating the development and delivery of a Water Space Study (WSS) to identify opportunities to restore and rejuvenate the river/canal landscape for the people who live on and use the river and canal, the environment and the local economy. The WSS will also assess the current demand/situation with regard river use/moorings across the whole of the B&NES river and canal network. River safety, development, flooding, biodiversity, public health and recreation will also play a key role in what services the river corridor and canal network could provide. It is also important that work on the river and canal is integrated with B&NES other policies, such as tourism, education, social care, health, economic wellbeing and 'housing'. It is anticipated that this work to collect adequate data and evidence will be completed by the December 2016.

383.

Except for those stretches of the river and canal which run through the built up area of Bath the river and canal lie within the Green Belt and hence the controls of Green Belt policy will apply. The NPPF is clear that inappropriate development within the Green Belt is, by definition, harmful and should not be approved except in very special circumstances. Substantial weight should be given to any harm to the Green Belt. As moorings are not recognised as appropriate development in the Green Belt by national policy, applications for residential and other moorings outside the urban areas and within the Green Belt will have to demonstrate 'very special circumstances'.

384.

In many cases moorings will not need planning permission. However, physical development required to create a mooring will require planning permission and Policy H6 sets out the circumstances in which planning applications for moorings will be acceptable. The NPPF and local planning policies also seek to conserve and enhance the natural and local environment. Any planning application for development affecting a waterway will be assessed to ensure that the proposed use of land or development is appropriate and whether opportunities for enhancing the amenities of the waterways have been fully recognised. There are a number of other policies in addition to Policy H6 which will be applicable to the conservation and use of the waterways as indicated in the diagram below.

385.

Policy H6 guides proposals to the most sustainable locations where there is easy access to necessary services and facilities. The Canal & River Trust has also published guidance for the development of new residential mooring sites to assist both developers and local authorities in considering residential mooring site applications.

¹ Partnership led group providing an overview to all issues/projects along the river corridor in Bath & North East Somerset

POLICY H6: Moorings

Development involving new and additional moorings will be permitted provided they are located outside the Green Belt and satisfy the following requirements:

1 they have good access to services and facilities (including shops, schools and health facilities), employment opportunities and to public transport and other sustainable transport links

2 there is no conflict with the navigation authority or the Environment Agency's operational requirements

3 adequate servicing and facilities for sewage and rubbish are available or can be provided

4 there is no negative impact on navigational safety

5 there is no adverse impact on the amenity, recreation, heritage and biodiversity interests of the waterway and its banks, landscape character which cannot be successfully mitigated

6 they provide adequate pedestrian and service vehicle access including access for emergency services

7 provision of safe access and egress during a flood

8 opportunities to enhance the amenities of the waterways are maximised

386.

The following documents can be used to inform proposals:

- B&NES Water Space Study (under preparation, anticipated completion (Part 1- evidence base) date December 2016)
- Residential Use of Inland Waterways (2011): Association of Inland Navigation Authorities: <http://www.aina.org.uk/docs/AINA%20Residential%20Use%20of%20Waterways%20Advisory%20Doc%20Feb%202011.pdf>
- Guidance for Development of New Residential Mooring Sites (England & Wales), 2011: <https://canalrivertrust.org.uk/media/library/1544.pdf>
- Policies for Moorings along the Banks of our Canals and Rivers (2009): <https://canalrivertrust.org.uk/media/library/1127.pdf>

Accessibility Standards

387.

Local Authorities have the opportunity to apply optional technical accessibility standards in relation to wheelchair accessibility and level access/adaptability of buildings, where they can demonstrate evidence of need and accommodate viability impacts. The standards are applied through Building Regulations but are introduced via local planning policies. Where there are existing local standards in place a “passport” approach is applied and the national optional technical standards can be applied as an equivalent. As B&NES already applied a local standard via its Planning Obligations SPD for Affordable Housing – which includes a requirement for 10% wheelchair accessible dwellings and a requirement for ground floor accessed residential properties to have access thresholds of a minimum gradient – the national standard will be applied in these circumstances.

388.

The Council is working to develop an enhanced evidence base to demonstrate local need for accessible housing as part of a cross-service project; this may lead to a specific percentage being applied in Policy H8 in relation to market housing.

POLICY H7: Housing Accessibility

Accessibility standards for Affordable Housing will be applied in accordance with the Council’s Planning Obligations Supplementary Planning Document, or successor guidance.

For market housing, dwellings should have enhanced accessibility standards and should meet the optional technical standard 4(2) in the Building Regulations Approved Document M.

Affordable Housing Redevelopment Schemes

389.

Where areas of social housing are to be redeveloped, including large estates or smaller areas managed or owned by Residential Social Landlords it is proposed that Policy H9 below will apply. This policy aims to protect against the net loss of much needed affordable housing stock, while also allowing for enhancements to the housing stock through necessary regeneration.

POLICY H8: Affordable Housing Regeneration Schemes

There is a general presumption to support the redevelopment of social housing where the following criteria can be demonstrated to be met:

- i** The physical condition of the housing stock is poor (i.e. the dwellings are substandard, or demonstrably not fit for purpose in the short-medium term or similar); and/or
- ii** There is a site specific socio-economic justification for re-development led regeneration, considered alongside alternative options for re-modelling or refurbishment;
- iii** If there is a loss of amenity space, policy LCR5 should be met.

Where the principle of redevelopment is accepted, there is a presumption against the net loss of affordable housing, subject to viability considerations and other social balance considerations.

Gypsies, Travellers & Travelling Showpeople

390.

In March 2012 the Government published 'Planning Policy for Traveller Sites', alongside the NPPF, which seeks to align planning policy for Travellers with housing. This requires the Council to demonstrate a five year supply of deliverable sites and a further five and where possible, ten year supply of developable sites. The Council has undertaken a refreshed assessment of need which updates the West of England Gypsy and Traveller Accommodation Assessment (GTAA) undertaken in 2007 for the Bath & North East Somerset area. This establishes the level of need for five, ten and fifteen year supply of sites in accordance with Planning Policy for Traveller Sites. Most of the need is from households on unauthorised sites and is therefore an immediate need.

From the evidence in the GTAA, there is an immediate need for 24 pitches for Gypsies and Travellers and a further 4 pitches between 2017 and 2027 and 5 transit pitches, and an immediate need for 40 Travelling Showmen's plots. The Council will identify sites to meet these needs in the Gypsy and Traveller Development Plan Document. Planning Policy for Traveller Sites clarifies that for a site to be considered deliverable it must be available now and offer a suitable location for development now, and be achievable and viable with a realistic prospect it can be delivered within five years.

391.

Planning Policy for Traveller Sites states that Traveller sites should be guided towards making effective use of previously developed, untidy or derelict land. It also states that development in the open countryside away from existing settlements or outside areas allocated in the development plan should be strictly limited. It does recognise, however, that some rural areas may be suitable for traveller's sites providing the scale of these sites does not dominate the nearest settled community and avoid placing an undue pressure on local infrastructure. Any proposed sites inside settlement boundaries would be considered against policies applying generally to residential development. Provision is more likely to be made outside such boundaries and will be guided by Policy CP11.

392.

The NPPF establishes a presumption against inappropriate development in the Green Belt unless very special circumstances can be demonstrated and the harm caused can be outweighed by other considerations. Planning Policy for Traveller Sites reiterates that sites in the Green Belt are inappropriate development. However, if exceptional circumstances exist, an allocation can be made in a DPD by removing land from the Green Belt. The criteria in Policy CP11 will be used to guide the identification of suitable sites for allocation in the relevant DPD and to identify sites to respond to future accommodation needs when assessed. These criteria will also be used when considering planning applications that may happen before the DPDs are prepared or in addition to sites being allocated.

POLICY CP11

Gypsies, Travellers & Travelling Showpeople

The following criteria will be used to guide the identification and allocation of suitable, available and deliverable or developable sites in a Development Plan Document to respond to the established accommodation needs of Gypsies, Travellers and Travelling Showpeople for the Plan period. Sites for Gypsies, Travellers and Travelling Showpeople accommodation will be allocated and planning applications permitted taking into account the following factors:

a the site is suitably located to allow access to local community services and facilities, including shops, schools and health facilities, and employment opportunities

b satisfactory means of access can be provided and the existing highway network is adequate to service the site

c the site is large enough to allow for adequate space for on-site facilities and amenities including play provision, parking and manoeuvring, as well as any live/work pitches if required to enable traditional lifestyles

d the site is well-designed and well-landscaped and has no unacceptable adverse impact on the character and appearance of the surrounding area

e adequate services including utilities, foul and surface water and waste disposal can be provided as well as any necessary pollution control measures

f there is no unacceptable impact on the amenities, health and well-being of occupiers of the site or on neighbouring occupiers as a result of the development

g the site should avoid areas at high risk of flooding and have no adverse impact on protected habitats and species, nationally recognised designations, landscape designations and heritage assets and their settings and natural resources

h the scale of the development does not dominate the nearest settled community nor place undue pressure on the local infrastructure

i the site does not lie within the Green Belt unless there are exceptional circumstances to justify making an allocation by removing land from the Green Belt or, for a planning application on unallocated land, that very special circumstances exist.

Delivery:

Delivery will be through the Development Management process. Sites will be identified through the Gypsies and Travellers DPD to meet identified accommodation needs for the Plan period.

MEETING LOCAL COMMUNITY AND RECREATIONAL NEEDS

393.

The Council needs to continue planning positively to meet needs for social, recreational, cultural facilities and services. Successful community facilities and services are integral to the vibrancy of communities across the District. Good community facilities provide opportunities for interaction between people, to get involved in activities and to have increased accessibility to basic services. This benefits the social prosperity of communities across the District, whilst providing knock on benefits for health and well-being, sustainability and the economy.

394.

National planning policy also stresses the importance of retaining existing community facilities and planning positively for the provision and use of shared space, community facilities and other local services. Community facilities are those that provide for the health and wellbeing, spiritual, educational, recreational, leisure and cultural needs of the community.

Policy aims

- Promote healthy lifestyles through encouraging the appropriate location outdoor and indoor facilities
- Safeguard against the loss of community and sports facilities, unless it can be demonstrated that they are no longer needed by the community they serve and are not needed for any other community or recreational use
- Encourage participation in community, and cultural facilities by ensuring that these are well-located and accessible
- Encourage flexible use of community and recreational facilities and venues and co-location of services

Safeguarding Local Community Facilities

395.

Land and buildings in community use are a valuable local resource. Displacing them by redevelopment or change of use makes it far more difficult to return them to community use. This could mean that future requirements for community use may lead to pressure to develop facilities on greenfield land in less accessible locations. This would be contrary to Government policy which places importance on guarding against the unnecessary loss of valued facilities and services.

396.

Whilst a Local Plan can seek to prevent the loss of existing sites and premises from community use, it cannot ensure that any particular facility continues to be made available to the public or any particular service continues to be provided. Within this context Policy LCR1 seeks to safeguard against the loss of valued community facilities.

POLICY LCR1: Safeguarding Local Community Facilities

Development involving the loss of land and/or building(s) valued as a community facility will only be permitted provided:

- 1** there is adequate existing local provision of facilities of equivalent community value; or
- 2** alternative facilities of equivalent local community value will be provided in the locality; or
- 3** the proposed loss is an integral part of changes by a public service provider which will improve the overall quality or accessibility of public services in the locality.

Community Facilities in Rural Areas

397.

Rural shops and community services are critical to the sustainable functioning of the rural areas and should be supported. This is the case across all villages and not just those identified as currently meeting the criteria of Policy RA1. There are a number of villages that play an important role in providing services and facilities for their residents and sometimes surrounding communities. It is vital that these facilities are maintained and enhanced wherever possible. Existing village shops will be supported with a presumption for retaining them in community use. Proposals for new shops and facilities that benefit the community will be supported through partnership working.

398.

Main centres both within and adjoining the District will continue to fulfil needs for comparison retail, a wider range of facilities, community leisure and cultural activities.

POLICY RA3 Community Facilities and shops

Proposals for the development of community facilities or shops will be acceptable within and adjoining all villages, provided that they are of a scale and character appropriate to the village and meet the needs of the parish and adjoining parishes

Public Houses

399.

It is recognised that public houses play an important role as a community resource, particularly in rural areas and local centres. They are also often used as a venue for social activities, offering a range of diverse services including libraries, childcare, meeting spaces for community groups, and shops. Loss of this resource and associated buildings can have a detrimental impact on both the economy of the settlement and the social well-being of the community. The NPPF also acknowledges that pubs are valued facilities and that Local Authorities should guard against their unnecessary loss.

400.

The Localism Act 2011 also makes provisions for communities to nominate important assets to be listed as assets of community value (ACVs). This places a six-month moratorium on sale or redevelopment and gives the community group in question the chance to raise the capital and put together a bid to buy the asset. Guidance is available from the government on the ways in which local authorities can support the Community right to bid in their area. A Ministerial Statement issued in January 2015 announced that where a public house is designated an ACV it will lose its permitted development rights for the change of use or demolition of those pubs that communities have identified as providing the most community benefit and mean that a planning application will be required for the change of use or demolition of a public house. This came into force on 6th April 2015 through the Town and Country Planning (General Permitted Development) (Amendment) England Order 2015.

401.

Policy LCR1A sets out the circumstances in which the loss of a public house to another use might be considered acceptable. Applicants will be expected to provide evidence that they have actively marketed the premises as a public house for at least six months through appropriate websites and publications and submit a feasibility study and financial appraisal to demonstrate that redevelopment or change of use of a public house is not economically viable.

POLICY LCR1A: Public Houses

The change of use of a public house which would result in the loss of a valued community facility (through demolition, redevelopment or change of use) will not be permitted unless:

- 1 it can be proven that the operation of a public house serving the local community is not economically viable and the premises have been effectively marketed for a consistent minimum period of six months as a public house for a price commensurate with the current market price for this use in the locality without success; or
- 2 the development or change of use would result in the provision of alternative facilities of equivalent or greater benefit to the local community.

New or Replacement Community Facilities

402. The Core Strategy seeks to ensure that adequate and accessible provision is made for the recreation, leisure and cultural needs of both existing and future communities in Bath and North East Somerset. It stresses that *'successful community facilities and services will be integral to the vibrancy of communities across the district'*. It makes the link between providing good community facilities and opportunities for people to meet and integrate, to get involved in activities and increased access to services.

403. Core Strategy Policy RA3 already supports the development of community facilities and shops within and adjoining the rural settlements provided that they are of a scale and character appropriate to the village and meet the needs of the parish and adjoining parishes. Policy LCR2 supports the provision of new community facilities in accessible and sustainable locations.

404. New community facilities or extensions to existing facilities outside the scope of Policy RA3 which meet the current and future needs of the local community will be supported provided they are in easily accessible locations and the land and/or building has the capacity to accommodate more than one use or activity.

405. Where there is a need to provide for community facilities in association with new development proposals – for instance, where the scale of the development gives rise to new community, educational or health care needs requiring additional provision or enhancement of existing provision or the replacement of the displaced existing facilities – the developer will be expected to make provision directly related in scale and kind to the need generated by the development. This can either be in the form of direct provision by the developer or where this is not possible or appropriate, financial contributions will be sought through the use of planning obligations

POLICY LCR2: New or Replacement Community Facilities

1 Outside the scope Policy RA3, development of new or replacement community facilities will be permitted provided the proposal is within or well related to the settlement, or in the case of existing facilities outside such settlements, they are well related to existing buildings and accessible by sustainable transport modes.

2 Where the existing local provision of community facilities is inadequate to meet projected needs arising from new development additional provision will be sought to meet any identified shortfall. This provision may be in the form of on-site provision or the enhancement/ improved access to existing facilities.

Building for Schools

406.

The NPPF places emphasis on ensuring that there is a sufficient choice of school places available to meet the needs of existing and new communities. It goes on to state that local planning authorities should take *'a proactive positive and collaborative approach to meeting this requirement, and to development that would widen choice in education.'* It places much importance on *'the need to create, expand and alter schools.'*

Safeguarding land for primary school expansion

407.

The Council has always recognised the need to ensure sufficient land is allocated to allow primary schools to develop and expand where such a need has been identified. Primary school reservations listed in previous Local Plans have been reviewed by Children's Services and any changes are reflected in the list below. This now includes the land adjoining St Keyna Primary School in Keynsham which will be safeguarded for future school expansion to enable a degree of flexibility in accommodating the future primary education needs envisaged in the town arising from indigenous population growth and the significant new development proposals.

408.

In Bath an additional primary school is being provided as a result of the need generated by and as part of the Crest element of the Bath Western Riverside development. Additional homes built in the remainder of Bath Western Riverside and as elements of mixed use development on other significant sites proposed to be allocated within the central area and river corridor would require an additional primary school. This school should ideally be provided within this part of the city.

409.

Policy LCR3 safeguards land for primary school use to provide for future identified educational needs. This will provide certainty in terms of land-use; reassurance to the schools concerns and indicates Council's commitment to developing these sites

POLICY LCR3: Land Safeguarded for Primary School Use

Land defined on the Policies Map is safeguarded for primary educational purposes.

1 Oldfield Park Junior, Claude Avenue, Bath	0.21 ha. for future expansion.
2 St Saviour's Primary, Bath	0.1 ha. for extension
3 St Keyna Primary, Keynsham	0.65 ha for expansion
4 Welton Primary, Midsomer Norton	1.1 ha. for extension.
5 Land at Silver Street, Norton Hill, Midsomer Norton	4.7 ha. to facilitate primary school provision
6 St. Mary's Primary, Writhlington	1.0 ha. for playing field.
7 Camerton Primary	0.6 ha. for extension
8 Clutton Primary	0.6 ha. for extension.
9 East Harptree Primary	0.25 ha. for playing field.
10 Freshford Primary	0.3 ha. for playing field.
11 Marksbury Primary	0.8 ha. for site extension.
12 Shoscombe Primary	0.4 ha. for extension.

Primary School Capacity

410.

Some primary schools in rural areas are at or reaching capacity so there is a need to consider the cumulative impact on nearby primary schools of allowing successive even small-scale windfall residential schemes. This means that some villages, whilst meeting the RA1 criteria (one of which is presence of a primary school), may have primary schools which do not have the capacity to meet the pupil needs arising from even small-scale windfall developments. This also has implications for the RA2 settlements which also rely on rural primary schools in the larger villages to accommodate the pupil needs arising from new housing development.

411.

In order for sites for residential development to be allocated and for housing to be delivered at these villages the school must have capacity to accommodate the education needs of the existing population and those arising from the development or the ability to expand. This would ensure the benefits of securing and maintaining balanced and more self-contained communities and reduce the need to travel are realised.

412.

Policy LCR3A will ensure that residential development will only be allowed where the primary school has sufficient capacity (or ability to expand) to accommodate the primary education needs of the existing population and those arising from the proposed development. Decisions should also be guided by the statutory guidance for local authorities, 'Home to school travel and transport guidance' which provides information on statutory walking distances and safe routes

POLICY LCR3A: Primary School Capacity

Residential development will only be acceptable where there is a school within a reasonable distance* that has sufficient spare capacity or is able to be expanded to create additional capacity to accommodate the pupil needs arising from the development.

*as determined by Department of Education's 'Home to school travel and transport guidance - statutory guidance for local authorities' and successor guidance.

Safeguarding land for cemeteries

413.

The Council owns and manages the Haycombe Cemetery, on the edge of Bath, and Harptree Cemetery and is responsible for the maintenance for 30 closed cemeteries. Others are owned and managed by the Town and Parish Councils or Parochial Church Councils.

414.

Land has been safeguarded in the previous Local Plan for the extensions to cemeteries identified to ensure future needs are met at Haycombe Cemetery and the cemetery at Eckweek Lane. As these are not yet implemented and this land is still required, Policy LCR4 will continue to safeguard this land to ensure future needs are met and continue to define these areas on the Policies Map.

415.

The cemetery at Durley Hill, Keynsham is estimated to meet demand up to around 2024.

Keynsham Town Council has agreed to consider looking for additional land for a cemetery in Keynsham from 2017 onwards to plan for the long term.

416.

Haycombe and the Durley Hill cemeteries are both in the Green Belt. The NPPF confirms that provision for cemeteries in the Green Belt is not inappropriate development providing it preserves the openness of the Green Belt and does not conflict with the purposes of including land within it.

POLICY LCR4: Safeguarding Land for Cemeteries

Land as defined on the Policies Map will be safeguarded for extensions to cemeteries at Haycombe, Bath and Eckweek Lane, Peasedown St John.

Safeguarding existing sport and recreational facilities

417. Sport plays a key role in the culture of Bath & North East Somerset, with Bath Rugby and Bath City Football clubs prominent forces in the city and the world class training facilities and athletes resident at the University of Bath. There is a strong culture of sports clubs in the area with well above average membership levels and a large volunteer workforce providing a myriad of sporting and physical activity opportunities.

418. The Fit for Life Strategy (2014) sets out the Council's ambitions for improving health and wellbeing and reducing health inequalities in Bath and North East Somerset through increasing physical activity levels. It seeks to find ways to make physical activity more central to people's lives and increase participation in Sport and Active Lifestyles.

419. Active Lifestyles is about increasing opportunities and participation for everyday activity, sport and recreation and preventing as well as treating ill health for all ages and abilities across the locality. The Council is seeking to develop and support activities that start where people are, are fun and sociable and help to build and strengthen communities.

420. The recreational and amenity value of school playing fields and other playing fields is considered particularly important and the community use of school playing fields should be encouraged. When not required for their original purpose, these recreational assets may be able to meet the need for recreational land in the wider community.

421. The NPPF sets out the national planning policy on safeguarding open spaces and sport and recreation facilities. It stresses the importance of having *access to high quality open spaces and opportunities for sport and recreation making an important contribution to health and well-being of communities.*

422. It expects *planning policies to be underpinned by up-to-date assessment of the needs for open space, sport and recreation facilities and opportunities for new provision.* Only then will it become clear whether there are open spaces, buildings or land that are genuinely surplus to requirements and even then their contribution to Green Infrastructure will need to be considered before it is declared truly surplus. The Green Space Strategy (2015) will help inform such decisions. It was carried out in-line with the NPPF and includes a robust assessment of needs and deficiencies in open spaces.

423. Policy LCR5 safeguards against the loss of recreational space, land and buildings used for sport and recreation as shown on the Policies Map

POLICY LCR5: Safeguarding existing sport and recreational facilities

Development involving the loss of open space (amenity green space, parks and recreation grounds, outdoor sports space, outdoor sports space, play space for children and youth, accessible natural green space), land and buildings of value for sports and recreation as shown on the Policies Map, will only be permitted provided it can be demonstrated:

1 is a surplus of similar facilities in the area and that the loss would not adversely affect the existing and potential recreational needs of the local population, making allowance for the likely demand generated by allocations in this; or

2 the proposed development only affects land which is incapable of being used for sport and recreation; or

3 suitable replacement facilities of at least equivalent quality, quantity and community value are provided in locations accessible by sustainable transport modes; or

4 the proposed development is for an indoor or outdoor sports facility with at least equal benefit to the development of sport and community access to sport to outweigh the loss of the existing or former recreational use, and

5 in the case of open space, it is not critical component of eco/green infrastructure network and any redevelopment improves habitat connectivity.

New and replacement sports and recreational facilities

424.

The NPPF highlights the importance of having access to high quality open spaces and opportunities for sport and recreation and having planning policies and up-to-date assessments of the needs for open space, sports and recreation which identify specific needs and quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area.

425.

The Green Space Strategy has been reviewed against the NPPF requirements as highlighted above. To reflect and meet the obligations of the national policy for open space provision, the adoption of this document and the strategic framework it provides will enable a consistent policy approach for open space planning and investment to be applied across the District, ensuring that opportunities are not missed. In addition, as a strategic open space framework, this document can, by setting out local open space intentions, provide a single point of reference to evidence conformity with existing and emerging national policies.

426.

The information from the assessment of local needs and the audit of provision has been used to develop standards of provision for open space, sports and recreation facilities. The standards have three aspects: Quantity, Access and Quality the following typologies are those where standards have been developed:

Allotments

Amenity Green Space

Park and Recreation Grounds:

- Outdoor sports space (Pitches)

- Outdoor Sports Space (Fixed)

Outdoor Sports Space (Private)

Play Space (Children)

Play Space (Youth)

Accessible Natural Green Space

427.

The standards associated with each of these typologies are set out in the Green Space Strategy. They have been used to identify existing deficiencies or surplus in the quantity, access and quality of facilities across the District. Community Growing Spaces, Historic Parks and Gardens, Churchyards and Cemeteries and Education have been mapped but standards have not been developed for these typologies.

428.

Detailed maps and analysis are provided within Part 2 of the Green Space Strategy (Area Profiles for Bath, Bathavon, Keynsham, Chew Valley and Somer Valley). The key findings are summarised below:

- There is insufficient supply of youth play space across all area profiles;

- There is insufficient supply of parks and recreation grounds across all area profiles with the exception of Bathavon, which is the area with sufficient supply of most open space typologies (with the exception of youth and children's play space);

- All area profiles have a deficiency in at least two open space typologies

429.

Two other key documents which will help inform decisions are:

- The Playing Pitch Strategy (currently under preparation and will replace the current version) follows Sport England's new framework and covers both natural and artificial grass pitches and is being developed with Sport England, the Football Association, the England and Wales Cricket Board, The Rugby Football Union, the England Hockey Board and the Lawn Tennis Association. The document seeks to ensure that there is a good supply of quality playing pitches and playing fields to meet the needs of the local community.

- The Built Facilities Strategy which reviews supply and demand data for swimming pools, sports halls and fitness suites within the Bath and North East Somerset area. It makes use of Sport England's Facilities Planning Model and was developed in partnership with Sport England.

430.

Policy LCR6 sets out the parameters within which proposals for new or replacement sport or recreational facilities will be acceptable and to ensure that a satisfactory level of new facilities or contributions towards the upgrade of existing facilities, including open space, is secured. All new residential development will be required to contribute to the provision of additional sport and recreational facilities to a level at least commensurate with the additional population generated by that development, and in accordance with the standards in the Green Space Strategy which provides detail on how the prescribed standards should be applied. Policy LCR9 (at the end of this chapter) deals with the level of provision for allotments required for new development

POLICY LCR6: New and replacement sports and recreational facilities

1 New or replacement sport and recreational facilities, or improvements and extensions to existing facilities, will be permitted within or adjoining a town or settlement, provided:

a it complements the existing pattern of recreational facilities

b it is accessible by sustainable transport modes

2 New or replacement sport or recreational facilities elsewhere will only be permitted where:

a the proposal, either by itself or together with other existing and/or proposed recreational facilities, does not have an unacceptable impact on landscape character or areas of ecological interest; and

b the re-use or adaptation of existing buildings is not practical or viable, and they are of a scale appropriate to the location and recreational use; and

c if an ancillary facility is proposed, it is well-related to the attraction it serves.

3 In all cases:

a the proposal would not give rise to significant adverse environmental conditions including the impact of air, noise, water quality and light pollution and be detrimental to public safety and the amenities of local residents; and

b vehicle access and on-site vehicle parking would be provided to an appropriate standard; and

c adequate access to and between the facilities would be provided for people with disabilities.

Where new development generates a need for additional recreational open space and facilities which cannot be met on-site or by existing provision, the developer will be required to either provide for, or to contribute to the provision of accessible sport and recreational open space and/or facilities to meet the need arising from the new development in accordance with the standards set out in the Green Space Strategy, and Planning Obligations SPD or successor documents

431.

- Design and Cost Guidance pages of the Sport England website

Local Green Spaces

432.

In addition to allocating development sites the NPPF encourages local communities to identify green areas of particular importance to them for special protection. The identified areas can be designated as Local Green Spaces through either a Local Plan or a Neighbourhood Plan. Once designated these open spaces will not be developed except in very special circumstances. In putting land forward for designation as a Local Green Space local communities need to be able to demonstrate that the land in question meets all of the following criteria (as stipulated by the NPPF):

- Where the green space is in reasonably close proximity to the community it serves.
- Where the green area is demonstrably special to a local community and holds a particular local significance, for example for reasons of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife.
- Where the green area concerned is local in character and is not an extensive tract of land.

433.

The Planning Practice Guidance (PPG) also suggests that if the land is already protected by designations such as Area of Outstanding Natural Beauty, Site of Special Scientific Interest, Scheduled Monument or Conservation Area, then consideration should be given to whether any additional local benefit would be gained by designation as Local Green Space. The green area does not need to be in public ownership.

434.

Local Green Space, once designated, will be subject to similar development restrictions as the Green Belt. Because of this the Council would not normally expect Local Green Space to be designated within the Green Belt. All Local Green Spaces that meet the above criteria are shown on the Policies Map and protected by Policy LCR6A. The reasons for the designation of each Local Green Space shown on the Policies Map is set out in the Local Green Space Recommendations Report (October 2015 which can be used in conjunction with Policy LCR6A to help inform the application of the policy.

POLICY LCR6A: Local Green Spaces

1 Development that would:

a conflict with the reasons that the local green space has been demonstrated to be special to the local community and holds a particular local significance; and

b prejudice its role as Local Green Space will not be permitted unless very special circumstances are demonstrated.

2 Local Green Spaces are defined on the Policies Map and additional areas may also be designated as Local Green Space in Neighbourhood Plans

Recreational development proposals affecting waterways

435.

Overland water resources (such as rivers, canals, lakes and reservoirs) form a constituent part of open space as defined by the NPPF and can offer important opportunities for sport and recreation. In Bath and North East Somerset the River Avon and the Kennet and Avon Canal, together with the Chew Valley and Blagdon Lakes, provide important resources for recreational uses.

436.

Recreational development proposals should be carefully controlled to avoid the gradual erosion of the inherent character of the River, Canal and Lakes and their immediate environment and are either within the Green Belt and/or the AONBs.

437.

Proposals for additional facilities will always need to be considered carefully, particularly in the context of Green Belt, landscape, ecological and other recreational policies, as well as taking into account the impact of traffic and parking on these sensitive environmental locations.

438.

Policy LCR7 sets out the circumstances in which recreational development affecting waterways would be acceptable

POLICY LCR7: Recreational Development Proposals Affecting Waterways

Development proposals for the recreational use of waterways and water areas will be permitted provided:

- 1** there is an overriding need to be in a waterside location
- 2** it is compatible with established recreational activities
- 3** it would not have an unacceptable impact on landscape character, nature conservation interests, amenity value of the area, safety or the highway interests
- 4** it would not have a detrimental impact on water quality and supply

In the case of development in the Green Belt, proposals should be consistent with national Green Belt policy and not harm the openness of the Green Belt

Telecommunications development

439.

Mobile communications and the internet are now an essential part of everyday life: for business operations and individual lifestyles. With the growth of services such as mobile internet access, demand for new telecommunications infrastructure is continuing to grow. The Council supports this expansion but will expect any harmful environmental impacts to be minimised.

440.

The NPPF advises that in preparing a Local Plan, local planning authorities should:

- support the expansion of electronic communications networks, including telecommunications and high speed broadband
- aim to keep the numbers of radio and telecommunications masts and the sites for such installations to a minimum consistent with the efficient operation of the network
- ensure existing masts, buildings and other structures are used, unless the need for a new site has been justified. Where new sites are required, equipment should be sympathetically designed and camouflaged where appropriate.

441.

Some telecommunications development is permitted under the GPDO. Telecommunications operators wishing to carry out some types of permitted development will require prior approval on matters relating to the siting and appearance of the development.

442.

Policy LCR7A sets detailed parameters within which development requiring planning permission or prior approval will be permitted. When considering applications for telecommunications development, the Council will have regard to the operational requirements of telecommunications networks and the technical limitations of the technology

POLICY LCR7A: Telecommunications Development

Proposals for telecommunications development will be permitted provided:

- 1 the siting and appearance of the proposed apparatus and associated structures minimises impact on the visual amenity, character or appearance of surrounding area
- 2 if on a building, apparatus and associated structures are sited and designed in such a way that minimises impact on the external appearance of the host building
- 3 in the case of a new mast, it can be demonstrated that the possibility of erecting apparatus on existing buildings, masts or other structures has been fully explored
- 4 development does not have an unacceptable effect on areas of ecological, landscape or the District's heritage assets such as the Bath World Heritage Site.

Broadband

443. The NPPF recognises the importance of infrastructure in delivering sustainable economic growth, and states that 'the development of high speed broadband technology and other communications networks also plays a vital role in enhancing the provision of local community facilities and services' and that 'local planning authorities should support the expansion of electronic communications networks, including telecommunications and high speed broadband'. Better broadband connectivity is becoming increasingly vital as many existing businesses are looking to grow, businesses from outside the area are looking to relocate and there is increased interest from potential investors.

444. The Council is working within a consortium to bring high speed fibre broadband to Bath & North East Somerset. Connecting Devon and Somerset (BDUK) is a public-private partnership of six local authorities (Somerset, Devon, North Somerset, Torbay, Plymouth and Bath and North East Somerset) and the delivery partner BT. The BDUK programme has been set up to deliver next generation broadband infrastructure to areas where the market has failed to invest. The aim of the programme is to ensure that most residents and businesses will have broadband speeds of over 24Mbps by the end of 2016, and that every premise within the programme area has a broadband speed of at least 2Mbps.

445. This will help support the aim of growing the value of the local economy by £1 billion by 2029 and increase creative industry/ ICT employment by 20%. It will also make people's leisure time more enjoyable, make it easier for residents to work from home, and also quicker connect to local public services.

446. From 2017 EU Legislation will specify that new build and major renovations of buildings will need to be high speed ready, however, exemptions will be allowed for historic buildings, holiday homes or where the cost to do this would be disproportionate, meaning that smaller and rural developments are likely to be excluded.

447. To help achieve these aims the Council is keen to make sure that that the concept of providing broadband is fully integrated with other service provision at the design stage for proposed employment and residential sites. This will help eliminate upgrading work at a later date and ensure that the development is able to accept and adopt technological improvements in the future. Alternative technologies and innovative solutions such as satellite, wireless and mobile connectivity should also be considered in terms of future proofing to ensure there is access to superfast broadband irrespective of location.

448. The purpose of Policy LCR7B therefore is to ensure that new residential and employment development provides for the necessary infrastructure to allow for the implementation of superfast broadband. It is recognised that the availability of such infrastructure may vary across the District. The expectation is that even where such infrastructure is not readily available provision is made for local infrastructure to enable connection when the strategic connections are put in place. This policy approach will complement Core Strategy Policy CP13 which requires that new developments are supported by the timely delivery of infrastructure. Clearly not proposals will be expected to make provision for broadband infrastructure (e.g. garage proposals).

POLICY LCR7B: Broadband

New residential and employment developments should be provided with superfast broadband infrastructure to enable superfast broadband provision and developers and infrastructure providers will be expected to facilitate this through early engagement.

Appropriate technology will be identified that will enable the delivery of superfast broadband infrastructure as part of infrastructure planning and should be considered early on as part of a comprehensive utility network plan.

Appropriate technology will be identified that will enable the delivery of superfast broadband infrastructure as part of infrastructure planning.

Access to superfast broadband (24Mbps+) should be sought, compatible with local broadband fibre networks.

Wherever practicable, superfast broadband infrastructure capacity should be incorporated to agreed industry standards.

Where it can be demonstrated that such provision would render the development unviable, alternative solutions should be provided as appropriate (such as mobile broadband infrastructure and / or Wi-Fi infrastructure) to enable superfast broadband delivery

449.

Guidance to inform development proposals includes:

- 'How to build a fibre network - Developers Handbook', Openreach (2015) or subsequent updates
- 'PAS 2016:2010: Next Generation Access for New Build Homes guide', Department of Business Innovation and Skills and the British Standards Institution (2011) or subsequent updates

Commercial riding establishments

450.

It is recognised that the development of commercial riding establishments can contribute towards agricultural diversification and make use of or adapt agricultural or other rural buildings. The development of large scale new buildings and car parks to meet demand would clearly be in conflict with the purposes of the Green Belt and schemes can be particularly inappropriate in Areas of Outstanding Natural Beauty and in other areas of landscape importance.

451.

Policy LCR7C sets out details requirements for considering proposals for commercial riding establishment. It seeks to ensure that equestrian activities do not have an adverse impact on the appearance of the countryside, including the visual impact of jumps and other equipment, and that horses are well housed and cared for.

POLICY LCR7C: Commercial Riding Establishments

Proposals for commercial riding establishments will be permitted provided the site is well related to an existing bridleway network and there is:

- 1 adequate land within the curtilage of the site to allow for the proper care of the horses
- 2 adequate site supervision without the need for erection of residential accommodation
- 3 adequate provision for the storage and disposal of animal waste
- 4 no detriment to visual amenity resulting from the impact of jumps, fences and other equipment
- 5 no unacceptable adverse impact on ground and soil erosion both on and off site
- 6 no adverse impact upon other recreational uses in the locality, and
- 7 no adverse impact on key ecological functions or key habitat integrity

New buildings only permitted where clauses 1) - 7) are met, the scale, siting and design have no adverse impact on landscape character.

In the case of development in the Green Belt, proposals should not have a materially greater impact than the present use on the openness of the Green Belt or would conflict with the purposes of including land within the Green Belt.

Local Food Growing

Context

452. Local food growing spaces are not only an important leisure resource, but they are recognised locally and nationally for their value as open spaces, especially in urban areas and for their contribution to sustainable development and health objectives including; local food production, physical activity promotion, community cohesion, green infrastructure networks, biodiversity and their potential for educational opportunities.

453. Local food growing space includes public, open and/ or residential space used for communal or individual food growing and includes both allotments and informal local food growing space:

Allotments

454. Allotment gardens have a statutory definition, and are made up of allotment plots. The Allotment Act of 1922 defines the term “allotment garden” as: “an allotment not exceeding 40 poles [i.e. equivalent to 112m²] in extent which is wholly or mainly cultivated by the occupier for the production of vegetable or fruit crops for consumption by himself or his family.”

455. The Allotments Act of 1925 gives protection to land acquired specifically for use for allotments, so called Statutory Allotment Sites.

456. “Temporary” allotments sites refer to sites that have not been specifically acquired for allotment use, although many are often used for decades and are not protected by the 1925 legislation. The term “Allotments” for the use of this policy approach refers to both statutory, temporary and private allotment gardens (as defined in law).

457. There are 42 allotment garden sites across Bath and North East Somerset. The Council is only responsible for the 23 sites in Bath. Elsewhere allotments are managed by other local bodies, such as Parish Councils and social housing organisations.

Informal food growing space

458. Informal food growing spaces include community gardens, community orchards and nuttories, fruit trees and bushes, private gardens, green roofs, raised beds, and other shared public and/ or open space that can be used for food growing. Unlike allotments informal food growing space may be available on either permanent or temporary terms, enabling community groups to cultivate land awaiting development on a meanwhile basis.

459. Research underpinning the Green Space Strategy (2015) demonstrates that there is a high demand for allotments with nearly every site across the District now full with a waiting list. Evidence to support the community value of allotments and informal food growing space is also included in the B&NES Local Food Strategy (2014–2017). Historic England have highlighted that in some cases, historic allotments will constitute non-designated heritage assets, and/or will contribute to the setting and character of a place, they can have additional protection for this reason under local and national policy.

460. Further provision of allotments and informal food growing space is needed and any loss should be resisted, as once lost, this land is unlikely to be replaced within accessible locations in the urban areas.

461. The aims of this policy approach are as follows:

- Protect existing allotments
- Support the delivery of suitable new allotments
- Support the increased provision of informal food growing space

Policy Rationale

462.

This policy approach has been informed by consultation with local stakeholders, including the Council's Parks Department and the B&NES Allotment Association. The policy refers directly to a number of new documents:

- B&NES Local Food Strategy (2014-2017)
- B&NES Allotment Management Plan (2015) which outlines how the Council will manage its allotments, and involve stakeholders and local people in the process.
- B&NES Allotment Site Selection Criteria (2015) outlines the selection criteria used to find potential allotment sites, also to be used to assess on site provision as part of development schemes
- B&NES Allotment Design Guide (Forthcoming) This guide will inform the process for allotment design and design principles
- B&NES Green Space Strategy (updated 2015)

463.

LCR9 will guide the provision of new allotments and community food growing space which is a priority identified in the Green Infrastructure Strategy and the B&NES Local Food Strategy. This policy will support the delivery of the Allotment Site Selection Criteria, Allotments Management Plan and Allotment Design Guide

464.

Policy requirements for local food growing are included in the Council's Sustainable Construction Checklist.

POLICY LCR8: Protecting Allotments

1 Development resulting in the loss of land used for allotments (or land evidenced as last used as allotments) will not be permitted, unless:

a The importance of the development outweighs the community value of the site as allotments and suitable, equivalent and accessible alternative provision is made elsewhere within a reasonable catchment area (as defined by the Green Space Strategy) and in line with LCR9; or

b the site is allocated for another use in the Placemaking Plan and suitable, equivalent and accessible alternative provision is made in line with LCR9.

2 Any loss of amenity land related to allotments should not compromise the proper function of allotment gardens including access, storage of tools, other communal areas or orchards, unless satisfactory mitigation can be delivered.

3 Existing formal allotments are identified on the Policies Map.

POLICY LCR9: Increasing the Provision of Local Food Growing

1 The identification of all new allotments sites must comply with the B&NES Allotments Site Selection Criteria and must:

- a** Be suitable for productive use.
 - b** Be accessible to the area they are intended to serve.
 - c** Be suitable for use as allotments through appropriate design (e.g. considering ecology and landscape).
- 2** New allotments must be well designed and managed in line with the B&NES Allotments Management Plan & B&NES Allotment Design Guide and must have a site Management Plan.

3 All residential development (including purpose built student accommodation and care homes) will be expected to incorporate opportunities for informal food growing, wherever possible (e.g. border planting, fruit bushes and trees, orchards and nutturies window boxes, balcony gardens, rooftop planters, external courtyards, edible planting, vertical planting, herb gardens, raised beds, garden space etc.). Suitable ongoing maintenance arrangements will need to be made.

4 Informal food growing space will be supported in principle including the temporary use of vacant sites for amenity land and informal food growing.

5 Where new development generates a need for allotments which cannot be met on-site or by existing provision, the developer will be required to either provide for, or to contribute to the provision of allotments to meet the need arising from the new development in accordance with the standards set out in the Green Space Strategy, and Planning Obligations SPD or successor documents.

A PROSPEROUS ECONOMY

ECONOMIC DEVELOPMENT

465.

The 2008-09 recession and subsequent depression to 2013 has served to remind us that it is in-demonstrates that it is everyone's interest to support the development and growth of a prosperous economy across B&NES. The Sustainable Community Strategy recognises that we must act at a local level to create prosperity through economic growth, whilst working towards a low carbon economy. The Development Plan will support and deliver elements of the B&NES Economic Strategy (2014-30), which aims to create the conditions for jobs growth throughout the District, leading to a more diverse, productive and resilient economy which provides better opportunities for all.

466.

A scarcity of resources – both natural and financial, an aging population, competition from overseas, and the loss of jobs in the traditionally strong local sectors, are all factors driving the need for change. The District's economy has a predominance of public sector related, retail, leisure and tourism employment and has the lowest weekly workplace wages and productivity in the West of England. These activities are extremely important to the District, but in recent times, lower-value activities such as some types of manufacturing, have lost ground, suffering job losses. It is therefore critical that the economy looks to offer more opportunities to its resident population.

467.

The District's economy is also dominated by micro and small businesses, which reflect an entrepreneurial spirit. Particularly productive activities include engineering, technology-related activities, and some creative industry activities, such as publishing and sound recording. The area is also home to critical business networks which can support and guide new businesses. The District, having more residents educated to degree level than the national average, is therefore well equipped to take up job opportunities locally, should they be created. The District is also well placed to build on its international reputation in order to promote investment.

468.

B&NES will aim to build on its considerable strengths and pursue a smart growth agenda, i.e. promotion of a higher value added economy rather than relying only on volume growth. This will focus on several key areas as put forward by the Economic Strategy:

- Business support and development:
- Employability and skills
- Business premises and infrastructure
- Promoting Investment

469.

By 2029 the end of the plan period, the District will have a more environmentally sustainable economy with increased local employment many more jobs, less overall commuting, a reduction in the contribution made by commerce and industry to the carbon footprint of the area, and a strong low carbon business sector. It will have a more socially inclusive economy with continuing high levels of economic participation, a focus on lifelong learning, and increased and relevant workforce skills. It will have a more diverse, productive and resilient economy due to the increase in the availability of knowledge-based jobs, where knowledge-based workers can find jobs and where local innovation can grow commercially.

Delivery:

470.

Sites will be identified and allocated in the Placemaking Plan to meet the identified employment space requirements. Delivery of economic development will also be facilitated by the B&NES Economic Strategy, the Council as a key land and property owner, its the Regeneration Delivery Plans activities and the Development Management process. Working alongside local communities and partners will be essential to deliver the ambitions of the Economic Strategy and developers may be asked to support the objectives of the Strategy through a Targeted Recruitment, Training and Supply-chain Protocol.

Diagram 21 THE ECONOMY IN 2029

What will our economy look like in 2026?

Estimated GVA contribution to Bath and North East Somerset economy by broad industry

The pie charts demonstrate how we might expect the economy of the District to have changed between 2010 and 2026, in terms of Gross Value Added (GVA) per broad industry. The economy has expanded, thanks largely to more activity in 'knowledge-based' activities.

- 1 Professional, Scientific, Technical
- 2 Wholesale and Retail
- 3 Info and Comms
- 4 Construction
- 5 Manufacturing
- 6 Financial and Insurance
- 7 Public Admin and Defence
- 8 Admin and Related
- 9 Water, Sewage, Waste
- 10 Real Estate Activities
- 11 Accommodation and Food
- 12 Human Health and Social Work
- 13 Transportation and Storage
- 14 Other Service Activities
- 15 Education
- 16 Arts, Ents, Recreation

Diagram 21
The Economy in 2026

Proposals involving Office and Industrial Land and Floorspace (B1, B2, B8)

Context

471. The availability of office and industrial land and premises in the right place and at the right time is vital for the economic success of B&NES and its resident workforce. The stock of office and industrial floor space needs to be managed, enhanced and increased to enable the delivery of the B&NES Economic Strategy (2014-30) and the West of England Strategic Economic Plan (2015-2030).

472. Policies (B1, KE1 and SV1) of the Local Plan contain long term targets to increase the stock of office floorspace in Bath, Keynsham and the Somer Valley. For industrial space the same policies set out whether the Plan is seeking to increase the stock or manage its forecast contraction.

473. In managing the existing stock of space, and where possible, (noting the existence of permitted development rights affecting employment land) decision-making will take into account monitoring information in relation to Policies B1, KE1 and SV1.

474. When allocated employment land (either an existing site or a new site) is subject to an application for an alternative use, regard will be had to whether there remains a reasonable prospect that an employment use will be realised. Due to the fact that these sites will have been allocated for such a use, based on evidence of need, the presumption will be that this is the case, unless current market signals are sufficient to challenge the need for continued long term protection.

Office Development (B1a uses classes)

Planning positively for office development

475. In order to plan positively for office space the Core Strategy identifies the current extent of the city centre boundary for Bath and a wider Bath Central Area (comprising the edge-of-centre locations that are most likely to be enable the city centre to grow). These areas fall within the Bath City Riverside Enterprise Area and will be the focus for new office space. The Enterprise Area also extends further westwards and new office space as part of allocated mixed use developments will be suitable in areas along this corridor that are well-connected to public transport options, and walking and cycling networks. The site allocations section of the Plan indicates the sites where this is case, and the quantum of space allocated.

476. At Keynsham, the redevelopment of Somerdale presents the most important opportunity to inject a new office market into the town. Although out-of-centre it is well connected by public transport options to both Bath and Bristol. At Midsomer Norton and Radstock the Placemaking Plan identifies town centre boundaries and it is within these centres that small levels of new office development will be concentrated.

477. The site allocations section identifies specific sites within and adjoining the city/town centre boundaries and elsewhere; in the Bath City Enterprise Area and at Somerdale, for new office uses to meet strategic needs.

478. Outside of these areas, office development will need to be justified in respect of Policy CR1 and the sequential test, and Policy CR2 and the impact test (if over 2,500 m² GIA).

POLICY ED.1A: Office Development

Proposals for office development within city and town centre boundaries, or on sites specifically allocated for this purpose are acceptable in principle.

Change of use & redevelopment of B1 (a) office to residential use C2 (residential institutions), C3 (dwellings houses) and C4 (HMOs)

479. Paragraph 51 of the NPPF (March 2012) states that “LPAs should normally approve (planning applications for change to residential use and any associated development from commercial buildings (currently in the B use classes) where there is an identified need for additional housing in that area, provided that there are not strong economic reasons why such development would be inappropriate”.

480. The term ‘change to’ encompasses both a change of use and redevelopment as ultimately both result in a ‘change to’ the use of land. Residential is defined as development in the C2, C3 and C4 use classes. Residential also encompasses sui generis residential uses such as large HMOs (i.e. blocks of student accommodation with shared flats hosting more than 6 persons).

481. What constitutes a ‘strong economic reason’ is not defined in the NPPF or the PPG and so requires definition in policy locally to enable decision-taking, and the Development Plan for B&NES includes a very specific policy (B5) to regulate new student accommodation in certain parts of the city.

482. In May 2013, Government amended the GPDO to introduce permitted development rights to enable premises in B1(a) office use (subject to some exclusions including but not limited to listed building and space built since May 2013) to change to C3 dwelling houses (though not C2, C4 or sui generis residential uses) without the need for a planning application, and subject to a prior approval process covering flooding, highways and transport issues and contamination.

483. The most commonly occurring exclusion in B&NES relates to a building being listed. If the building is listed or within the curtilage of a listed building (which is often the case in the centre of Bath), permitted development is not applicable and a planning application is needed. However, the Council considers that the purpose of such an application is to deal with (in addition to the prior approval matters listed above) any risk to the significance of heritage assets and not ‘in-principle’ issues. The permitted development rights initially lasted until May 2016, but after some uncertainty about whether they would be extended, in October 2015 Government announced that the rights would be extended indefinitely.

484. The utilisation of permitted rights has had a meaningful negative impact on the supply of office space in Bath city centre, including on good quality occupied space. This means that more new office space will be needed than previously proposed when the Core Strategy was adopted. Whilst an expectation of losses was built into the Plan based on trends, permitted development rights have meant that those expectations have already been exceeded. The gross amount of new office space to be planned for has thus been increased as set out in Core Strategy Policy B1 in order to achieve the necessary net outcome. Making the rights permanent further risks undermining the spatial strategy for the city as a whole and therefore the Council will consider making an Article 4 Direction to remove the rights in specific parts of the District. In 2013 it applied to Government for parts of the District to be exempted as Article 2(5) land but was not successful.

485.

The current permitted development rights only apply to a literal 'change of use' (not redevelopment). Currently, proposals for the 'redevelopment' of office space to C3 residential use still require a planning application, which can test in-principle matters (albeit against the background of the NPPF:51). However, in October 2015 Government announced that it intended to extend permitted development rights to redevelopment. The extended rights will enable the demolition of offices and new build as residential use but will be subject to as yet unknown limitations and prior approval tests by the local planning authority. The full details are not yet known. Further, the Council will consider making an Article 4 Direction to remove change of use and redevelopment rights in specific parts of the District. The policies below are written to be sound in the current national planning context and to be flexible enough to be able to respond to changes at a national or local level, without requiring a review of the policy.

486.

Proposals for the redevelopment of offices to a C2, C4 or sui generis residential uses do not benefit from permitted development rights and will, in all circumstances, be judged against policy ED.1B. Where a proposal is for student accommodation, Policy B5 of the Core Strategy will also be used in decision-taking.

POLICY ED.1B: Change Of Use & Redevelopment Of B1 (A) Office To Residential Use

Clause 1

a The conversion of office space (B1a) to C3 is normally permitted development and the GPDO sets out circumstances when it is not. Most commonly this circumstance relates to listed buildings. So long as the permitted rights remain in force the LPA will not raise any in-principle planning issues in respect of applications for the loss of office space in listed buildings.

b Should this permitted development right be extinguished or removed clauses 2a, 3a and 3b on the redevelopment of office space will also apply to all applications for conversions. Permission will be granted unless both clause 3a and 3b) are met, which would equate to a strong economic reason for refusal.

Clause 2

a The redevelopment of non-listed office space (B1a) to C3 will be permitted unless both clauses 3a and 3b) are met, which would equate to a strong economic reason for refusal.

b If permitted development rights are widened in scope, to include redevelopment, as well as conversion to C3 then this right will take precedence over Clause 2 of this policy

c The conversion or redevelopment of office space (B1a) to non-student C2, C4 residential uses, will be normally be approved, unless both clauses 3a and 3b) are met, which would equate to a strong economic reason for refusal

Clause 3

a the space is within the Bath Central Area, the Bath City Riverside Enterprise Area, Somerdale, or a town centre listed in Policy CP12, or on a site that has been granted permission since 2011

b the loss of the space would be a significant loss to strategically important office accommodation in B&NES and significantly harm the Council's ability to plan positively for economic development.

In determining planning applications against clause 3b consideration will be given to:

- the quality of the office space (existing or permitted) to be lost or not implemented relative to alternative, available premises in the locality, and whether these are suitable for any displaced existing occupiers
- the need to retain the space in the context of the achievement of strategic Core Strategy targets set out in B1, KE1 and SV1;
- current market signals and forecasts (to ensure that at any point in time the long term targets of CS policies B1, KE1 and SV1 remain justified)
- in the case of a mixed use residential-led site granted permission since 2011, whether the premises are critical to the sustainability of the permission and whether implementation remains viable, and realistic in light of market signals.

Change of use and redevelopment of B1 (a) office use to other town centre uses (A1, A2, A3 C1, D1 and D2)

487. In May 2013, Government introduced permitted development rights that enabled B1 uses (up to 150 sq.m and excluding listed buildings) to change use to shops and other retail premises (A1, A2, A3 uses) for a single period of up to two years. After two years the use must revert back to B1. These rights ended in May 2015 (although a change of use implemented in April 2015 would be valid until 2017).

488. The LPA has monitored the take up and impact of these rights. There were no adverse impacts to suggest that the Development Plan needs to be restrictive once the rights are extinguished. Retail uses normally require a ground floor premises and a permissive stance is therefore unlikely to cause a significant reduction to the stock of office space in the District, which usually occupies the space above shops. Accordingly, in designated city, town, district and local centres, and elsewhere there will be a permissive approach to applications to change use from B1 (a) offices to shops. If this approach

results in significant unintended negative effects on the office market, the Council will undertake a partial review of the Plan via the fast track route set out in the NPPG.

489. Permitted development rights do not exist for the change of use of office space to C1, D1 and D2 uses aside from in relation to a state-funded school (subject to exemptions and via a prior approval process). Where the control of the use is possible the Council will prioritise the retention of office space over C1, D1 and D2 uses. It is necessary to do this due to the erosion of planning control in relation to changes of use (and potentially redevelopment) from office to C3. In practice this is most likely to be of use in protecting office space from hotel conversion/redevelopment in circumstances where this would be detrimental to the operation of the office market. In some cases this may not be detrimental.

POLICY ED.1C: Change Of Use And Redevelopment Of B1 (A) Office Use To Other Town Centre Use

1 The change of use of office space to A1, A2 and A3 uses will be permitted unless clauses 3a and 3b of Policy ED.1B apply

2 The change of use or redevelopment of office space to other town centre uses will not normally be permitted, unless

a The space is of particularly poor quality in relation to the total stock of the city, or, if this is not common ground between the applicant and LPA

b The space has been marketed for 12 months, on reasonable terms, at a time when the UK economy is growing and no serious occupier interest has been forthcoming

Even where these criteria are not met the economic and social benefits of the alternative proposed town centre use (in terms of employment, GVA and contribution to the centre and any townscape improvements resulting from change) will be material considerations, that could, in exceptional cases, outweigh ED.1C (2)

Light Industrial (B1c), Heavy Industrial (B2) and Warehousing (B8) Uses

Planning positively for industrial development

490. Paragraph 20 of NPPF expects LPAs to plan proactively to meet development needs of business, including industrial type activity. Planning positively for industrial development in B&NES primarily means protecting the best of what the District has to offer in terms of supply, whilst adding to the stock of available land where needed. Permitted Development rights enable both extensions to and losses of industrial space in certain circumstances and in some cases are subject to a prior approval process.

491. Historically, Policy ET.3 of the B&NES Local Plan (2007) identified 'Core Business Areas' for B1c, B2 and B8 uses. These areas were afforded a high level of protection from alternative (higher value) uses. The Core Employment Areas have been reviewed to assess whether they should be specifically identified for protection in the current Local Plan as Strategic Industrial Estates or Other Primary Industrial Estates. In reviewing land the Council has had regard to:

1 whether the site is strategic, is not strategic but of primary importance, or is of lesser significance

2 whether it is needed to maintain a balanced and mixed economy based on forecasts of change and the strategic policy response as set out in the Core Strategy.

3 whether there are reasonable prospects for churn or redevelopment within the site should current occupiers leave and whether different levels of protection are appropriate for different parts of an estate.

4 The 2015 Industrial Land Review (Lambert Smith Hampton, 2015), which involved site visits for 24 of the most notable industrial areas, which collectively amounted to 300,000 sq.m of floor space (46% of the district's total stock and 39% of total units) to take into account current market signals in respect of demand and supply.

5 Paragraph 22 of the NPPF, which advises that there must be a reasonable prospect of a site being used for the allocated employment use. This applies equally to land currently or last used for employment purposes and new greenfield allocations.

492. A list of Strategic Industrial Estates and Other Primary Industrial Estates is set out in Policy ED2.A. The 18 Core Business Areas of the former B&NES Local Plan (2007), mostly exclusively industrial in nature, have been reclassified into 4 Strategic Industrial Estates and 4 Other Primary Industrial Estates.

493. Each urban policy area of the Core Strategy has at least one strategic industrial estate and the Somer valley has two. In combination these provide around 200,000 sqm (NIA) of floorspace and account for around 31% of the stock of the District. Within the Somer Valley Policy Area 4 'Other Primary Industrial Estates' are identified, providing a further 35,000 sqm (NIA) of space and accounting for a further 6.5% of District supply. The Somer Valley is particularly dependent on its supply of industrial land in respect of its economic and employment structure, hence the significance of the 'Other Primary Industrial Estates'.

494. Accounting for just over one third of total supply these locations considered to be the most important concentrations of industrial land supply in the District. There are very strong economic reasons to retain them and they are afforded the highest level of protection in the Plan. Un-named estates, smaller industrial clusters and standalone premises are subject to Policy ED2.B (unless allocated for another use in the site allocations section). They are still subject to protection, to guard against the wholesale and unsustainable redevelopment of industrial land supply to other higher value uses, but to a lesser degree.

Diagram 7: Strategic (red) and Other Primary Industrial Estates (blue)

Diagram 8: Previous B&NES Local Plan (2007) Core Business Areas not carried forward as either Strategic or Other Primary Industrial Estates

(Diagram to aid consultation on Draft Plan and to be deleted at adoption)

Permitted Development

495. Industrial and warehousing premises benefit from limited permitted development rights for their erection and exterior alteration. These are set out in the GPDO. Where there is any doubt as to whether development would be permitted development, advice from the LPA should be sought to determine if the proposed works are permitted development or whether a planning application is needed.

496. In March 2015 a new permitted development right, for a three year period, allows storage or distribution buildings (B8) to change use to residential (C3). Up to 500 sq.m. of floor space will be able to change to residential use. The right is subject to a prior approval process covering transport and highways, air quality impacts on intended occupiers, noise impacts of the development, risks of contamination, flooding, and also where the authority considers the building to which the development relates is located in an area that is important for providing storage or distribution services or industrial services or a mix of those services, whether the introduction of, or an increase in, a residential use of premises in the area would have an adverse impact on the sustainability of the provision of those services.

497. The new right does not apply in AONB and World Heritage Sites, Listed Buildings or land within the curtilage of Listed Buildings, Scheduled Monuments, or in Sites of Special Scientific Interest. These designations mean that a planning application is needed to ensure that any possible issues in relation to them can be fully considered. Due to the City of Bath World Heritage Site the whole city is not subject to the new rights and a planning application will be needed to determine whether, in addition to the prior approval tests, there is any risk related to the significance of heritage assets. This is unlikely to be the case in most circumstances. After changing to a residential use, existing permitted development rights for dwelling houses (C3) will not apply. In Autumn 2015 Government signalled that permitted development rights would be extended to include light industrial buildings (B1c), again subject to exclusions prior approval tests. Further details are awaited in a change to the GPDO.

498. If the site is under an agricultural tenancy then the consent of both the landlord and the tenant will be needed for any development to be permitted. The right only applies to buildings that were last used or were in use as storage or distribution (B8) on or before 19th March 2014. However, there is an additional requirement that a building seeking to change use must have been in B8 use for a period of a least 4 years before the date development begins.

499. In October 2015 Government announced that permitted development rights for a change of use of light industrial buildings to residential were to be implemented. Further details on the prior approval tests are awaited, but may be similar to those for the change of B8 uses to residential. Once the change to GPDO is confirmed some changes may be needed to policies ED.2A and 2B. the Council has the option of making an Article 4 Direction to remove the rights in specific locations.

Managing Other Losses

500. Despite the need to plan proactively for business uses, Paragraph 51 of the NPPF (March 2012) states that:

“LPAs should normally approve planning applications for change to residential use and any associated development from commercial buildings (currently in the B use classes) where there is an identified need for additional housing in that area, provided that there are not strong economic reasons why such development would be inappropriate”.

501. The term ‘change to’ can be interpreted widely enough to encompass both a change of use and redevelopment as ultimately both result in a ‘change to’ the use of land. Residential uses are defined as development in the C2, C3 and C4 use classes. Residential also encompasses sui generis residential uses such as large HMOs (i.e. blocks of student accommodation with shared flats hosting more than 6 persons).

POLICY ED.2A: Strategic (*) And Other Primary Industrial Estates

1 Proposals for light industrial, heavy industrial, warehousing (classes B1c, B2, B8), builders merchants will be acceptable in principle within the following Industrial Estates identified on the Policies Map. Car showrooms will also be acceptable on undeveloped land in these areas and where this would not replace B1c and B2 land and premises.

Bath

a Newbridge Riverside(Brassmill Lane, Locksbrook Road Estate and The Maltings(*)

Keynsham

b Ashmead Road & Unity Road Estate, including World's End Lane Extension(*)

Somer Valley

c Westfield Industrial Estate, Westfield(*)

d Old Mills industrial Estate and its extension, Paulton(*)

e Mill Road, Radstock

f Midsomer Enterprise Park, Radstock

g Haydon Industrial Estate, Radstock

h Bath Business Park, Peasedown St John

2 The identification of these areas as Strategic and Other Primary Industrial Sites means that there is a presumption in favour of retaining them solely for the aforementioned uses . There are strong economic reasons why other uses would be inappropriate because of the economic significance of these areas. Applicants seeking to challenge this presumption should provide compelling evidence that circumstances have changed to the extent that there is no reasonable prospect of land or premises being used for the allocated purpose, by reference to:

a Whether existing premises are being used productively, or if not, the viability of reusing vacant premises or developing allocated land for industrial use,

b the level of interest in existing premises following a marketing period of 24 months, on reasonable terms, during a sustained period of UK economic growth.

c general market signals of demand across the District and in relation to the locality i.e. the relevant settlement(s)

d The availability and quality of alternative premises

e Whether any other evidence casts critical doubt on the validity of Policy B1, KE1 and SV1 insofar as they relate to the required supply of industrial space

3 Applicants will also need to demonstrate that non-industrial uses would not have an adverse impact on the sustainability of the provision of services from industrial premises that remained around the site, or would not act against the development of undeveloped areas for industrial uses.

POLICY ED.2B: Non- Strategic Industrial Premises

1 Proposals for the uses listed in ED.2A will be acceptable in-principle at sites already occupied by smaller clusters and stand-alone industrial premises provided that this would not cause unacceptable environmental, residential amenity or highways problems.

2 Non-strategic sites are not afforded the same level of protection as those listed in ED.2A. Applications for residential development or others uses will normally be approved unless there is a strong economic reason why this would be inappropriate. Evidence of unsuccessful marketing on reasonable terms for 12 months prior to an application and during a sustained period of UK economic growth will be taken as evidence that there is not a strong economic reason for refusal.

SUSTAINING A BUOYANT RURAL ECONOMY

Context

502.

The rural areas are economically productive and make an important contribution to the overall economy of the District. The rural economy must be enhanced and sustained. Agriculture remains important and a variety of small business including the self-employed are also vital to the rural areas economic future. Rural tourism also provides significant economic benefits and, where appropriate, both visitor accommodation and new visitor facilities should be encouraged.

503.

With regard to agriculture it is predicted that agricultural production for local markets will become increasingly important as energy prices rise and globalised food supplies are disrupted by changing weather patterns. Farming in the rural areas will have an important role to play in supporting food security and as such, local farm shops, local food production and small scale farm developments will be supported. Therefore, conversion or replacement of currently underused agricultural buildings should only take place if it can be demonstrated that these buildings are not required for local food production purposes. There are also likely to be increasing employment opportunities arising through the growing renewable energy sector such as biomass, wind and hydro.

504.

Whilst economic development that supports the sustainability of the rural areas will be encouraged it is also important that the right balance is struck between protecting the high quality environment and allowing flexibility for some growth to allow for small businesses to develop.

505.

In the villages which meet the Policy RA1 criteria small scale employment development may be appropriate and potential site allocations will be considered through the Placemaking Plan. In order to ensure the on-going economic sustainability of the rural areas as a whole, creation of new and retention of existing small businesses will be encouraged. This can be assisted through the re-use and conversion of redundant or underused agricultural buildings (where they are not needed for agriculture) and such uses will therefore, be considered in the first instance. There may also be opportunities to convert such buildings to tourism uses that will boost the local economy. Improvements to broadband provision will be key in helping small businesses and the self-employed (including many that work from home) to flourish.

506.

In some circumstances, where business use of a redundant agricultural building is unviable conversion to a residential use may be appropriate if the building is well connected to a village, services or public transport networks.

507.

In considering the conversion or re-use of redundant agricultural buildings care must be taken to ensure that such development does not harm bats or their roosts, as required under the Conservation of Habitats and Species Regulations 2010. In the case of the re-use of historic agricultural buildings the proposal should not threaten the historic asset.

508.

Proposals for the re-use of rural buildings will be considered against the provisions of national policy and Local Plan Policy ET.9.

509.

~~Within the Green Belt, the major existing developed sites as identified in the Local Plan will continue to be considered appropriate for infill or redevelopment for business uses in line with the existing Local Plan policy (see also para 6.64A).~~

510.

The NPPF states that local authorities should adopt proactive strategies that:

- Support prosperous rural economies
- Promote the development and diversification of agricultural businesses
- Mitigate and adapt to climate change
- Conserve and enhance the natural environment (including protecting soil and the best and most versatile agricultural land)

511.

The Core Strategy recognises and seeks to maintain and enhance the important contribution the rural economy makes to the overall economy of the District. The particular role both agriculture and rural tourism has to play is acknowledged and employment opportunities should be capitalised on when they arise whilst making sure the quality of the environment is safeguarded.

512.

The Placemaking Plan's emphasis is to enhance the rural economy by supporting agricultural development including infrastructure for local food production and supply, agricultural diversification and other new employment development. The policy framework provides guidance on the re-use of rural buildings, accommodation for agricultural workers and the protection of agricultural land. The B&NES Local Food Strategy provides a body of evidence to underpin and inform the recommended policy approach.

Employment uses in the countryside

513.

Core Strategy Policies RA1 and RA2 allow small-scale employment proposals at villages outside the Green Belt within and adjoining the Housing Development Boundary providing it is of an appropriate scale, character and appearance. The Core Strategy encourages the creation of new and retention of existing rural businesses to underpin economic sustainability especially through the reuse and conversion of redundant or underused buildings. The reuse or adaptation of buildings in the countryside is particularly important in the changing structure of the rural economy and can assist with farm diversification for commercial, leisure and tourism uses.

514.

National planning policy requires that planning policies '*support the sustainable growth and expansion of all types of business and enterprise in rural areas, both through conversion of existing buildings and well-designed new buildings*'. Policy RE1 provides appropriate criteria for considering new employment development proposals in the countryside consistent with the NPPF in supporting economic growth and creating jobs in rural area.

POLICY RE1: Employment Uses In The Countryside

Proposals for employment uses in the countryside outside the scope of Core Strategy Policies RA1 and RA2 will be permitted providing it is consistent with all other relevant policies, and involves:

- i replacement of existing buildings;
- ii the limited expansion, intensification or redevelopment of existing premises; and
- iii it would not lead to dispersal of activity that prejudices town and village vitality and viability.

In the case of development in the Green Belt proposals should be consistent with national Green Belt policy.

Agricultural development

Policy aims:

- Support development that enhances local food production and enables the processing, storage and distribution of local food.

515.

Agriculture plays an important role in the local economy and provides the basis for other economic activities in rural areas. By contributing to local food production and supply, farm businesses also have a vital role in enhancing food security and contributing to the mitigation and adaptation of climate change.

516.

Over the past decade farming in the area has come under increasing pressure due to factors such as global competition, a slump in commodity prices, livestock disease, falling financial support and growing demands to manage the countryside so that its beauty and richness are enhanced. The total agricultural workforce has decreased from approximately 1000 in 2001 to 883 in 2013 – a decrease of approximately 12%. Part-time, seasonal and casual labour accounts for over 50% of this total. Within B&NES there are approximately 374 farm holdings in 2013 which has declined by 6% from 399 farm holdings in 2010 (DEFRA, 2015).

517.

The Placemaking Plan's emphasis is therefore to support farm business function and local food production and supply to ensure that a robust and prosperous food and farming sector is maintained and enhanced. Enabling value to be added to locally grown food through the development of storage, processing and distribution facilities is important to supporting the rural economy and allowing for the benefits of local food to be more widely realised. As such, development that supports farm business function and local food production and supply such as small-scale agricultural developments and small scale development for food storage, processing, distribution and associated retail function will be supported in principle.

518.

Policy RE2 sets out the circumstances within which proposals for agricultural development would be acceptable. It also allows for the development of local food supply chain infrastructure such as on-farm processing facilities to enable local food production and supply.

POLICY RE2: Agricultural Development

1 Agricultural development (including; the erection of new agricultural buildings; significant extensions/ alterations to existing agricultural buildings; installation of machinery; construction of access roads) will be permitted providing:

a There are no unacceptable environmental and/or health impacts which cannot be adequately mitigated;

b Adequate provision for the storage and disposal of animal waste is provided; and

c The proposed development is commensurate with the agricultural activities on the site.

2 Development that retains and strengthens food storage, processing, supply and distribution infrastructure will be supported in principle where:

a It enhances local food production and/or supply; and

b There are no unacceptable impacts including those associated with transport, environment and public health.

3 Non-agricultural related development on agricultural land will only be permitted where:

a It does not have an adverse effect on the efficient operation of an agricultural business.

b It does not lead to the fragmentation or severance of a farm holding or compromises agricultural function or key ecological function or habitat integrity.

Farm diversification

Policy aims:

- Permit sustainable farm diversification

519.

With the existing pressures on traditional agriculture, farmers increasingly look to diversify beyond the agricultural industry in order to supplement income and to give some resilience against market fluctuations. The Placemaking Plan's emphasis is to support farm diversification where it would not have an adverse impact on the environment and social and economic vitality of rural areas.

520.

Farm diversification schemes can cover a range of new uses including businesses such as food processing and packing, farm shops, renewable energy, equestrian facilities, sporting facilities, nature trails, craft workshops, holiday accommodation and information technology. Diversification schemes should help to support rather than replace farming activities on the rest of the farm.

521.

The new permitted development rights (May 2013) will enable existing redundant agricultural buildings of 500m² or less to change to a range of new business uses to boost the rural economy whilst protecting the open countryside from development. This includes to shops, financial and professional services, restaurants and cafes, business, storage or distribution, hotels, or assembly and leisure uses. However, for buildings between 150m² and 500m², prior approval will be required, to ensure that the change of use does not create unacceptable impacts (such as transport and highways problems, flood risk and contamination issues). Listed buildings and ancient monuments will continue to be protected. The scale of the diversification should not undermine the rural character of the farm or the surrounding area.

522.

Policy RE3 sets out the circumstances within which proposals for farm diversification would be acceptable. It seeks to prohibit activities that lead to the fragmentation or severance of a farm holding or compromise agricultural function and sufficiently flexible to allow some limited dispersal of activity from towns or villages taking into account the success and role of rural businesses such as farm shops.

POLICY RE3: Farm Diversification

Proposals for farm diversification involving the use of agricultural land or buildings will be permitted providing:

- i** it is consistent with Policy RE5 (protection of high grade agricultural land)
- ii** it complements the agricultural function of the holding
- iii** it does not compromise the agricultural function of the holding or lead to the fragmentation or severance of a farm holding
- iv** the activity will not lead to an unacceptable impact on the viability of nearby town or village centres

v in the case of a farm shop, the operation would not prejudice the availability of accessible convenience shopping to the local community

vi it does not compromise key ecological function or key habitat integrity

vii existing buildings are re-used in accordance with Policy RE6

Where existing buildings cannot be re-used in accordance with Policy RE6, new buildings will be permitted only where they are required for uses directly related to the use of or products from the associated land holding, are small in scale, well designed and grouped with existing buildings.

Essential dwellings for rural workers

Policy aims:

- Support essential housing development for rural workers.

523.

A special need may arise for accommodation which is essential for the efficient operation of the rural economy; this particularly refers to agriculture. Where the need for accommodation arises in many cases this could be met by housing in nearby settlements. Where this is not feasible a site within a hamlet or existing group of buildings or dwellings is preferable to an open location.

524.

Policy RE4 seeks to limit the size of any potential dwellings so that is relative to the functional requirements. It also takes a more flexible approach to new agricultural uses to lend greater support to agricultural dwellings to support new agricultural businesses not just existing ones.

POLICY RE4: Essential Dwellings For Rural Workers

1 New dwellings will not be permitted outside a Housing Development Boundary in the open countryside unless there is an essential need for a rural worker to live permanently at or near their place of work in the countryside and where it can be demonstrated:

i there is a clear functional need for the worker to live on the holding;

ii the business is financially viable

iii the need for the accommodation is for a fulltime worker;

iv the functional need could not be fulfilled by another existing dwelling in the holding or other existing accommodation in the area or through the re-use of an existing building in the holding;

v such dwellings are sited within a hamlet or existing group of buildings and are restricted in size relative to the functional requirements of the business; and

vi occupancy will be restricted to rural workers.

2 New dwellings essential to support a newly established rural business will only be granted for a temporary period provided there is clear evidence of a firm intention and ability to develop the enterprise concerned and the provisions of clause 1) are satisfied.

Protection of the best and most versatile agricultural land

525.

The NPPF states that local authorities should adopt proactive strategies that conserve and enhance the natural environment including protecting soil and the best and most versatile agricultural land.

Policy Aims

- Avoid development on the best and most versatile agricultural land.
- Direct development to areas of poorer quality land in preference to higher quality.

526.

Agricultural land is one of the District's most important resources. The Governmental Department for Environment, Food and Rural Affairs (DEFRA) classifies agricultural land on a scale of 1 to 5. Grades 1, 2, and 3a are defined as the best and most versatile agricultural land. Grade 1 land forms less than 3% of UK agricultural land, and produces yields that are high and less variable than land of lower quality (Natural England, 2012). Protecting the best and most versatile agricultural land is not only key to food production and the rural economy but it enables further environmental benefits to be realised such as aquifer recharge and flood control whilst allowing for communities to respond positively to food security challenges in the future. The Placemaking Plan's emphasis is to avoid development on the best and most versatile agricultural land and to direct development to areas of poorer quality in preference to higher quality.

527.

Policy RE5 not only protects agricultural land but will help support development that enhances local food production and processing in line with the B&NES Local Food Strategy. Land of agricultural Grade 3 makes up the majority of the District's rural land.

POLICY RE5: Agricultural Land

1 Development which would result in the loss of the best and most versatile agricultural land particularly Grade 1 and 2 will not be permitted unless significant sustainability benefits are demonstrated to outweigh any loss.

2 Where it can be demonstrated that there is an overriding need for a proposal which will result in the loss of agricultural land, development should be steered towards the use of lower quality agricultural land in preference to higher quality agricultural land.

Re-use of rural buildings

528.

The re-use and adaptation of existing rural buildings has an important role in meeting the needs of rural areas for commercial and industrial development, as well as for tourist, sport and recreation and residential uses. It can reduce demands for new building in the countryside, avoid leaving an existing building vacant and prone to vandalism and dereliction, and provide jobs. The Rural Areas chapter in the Core Strategy also stresses the importance of re-using rural buildings.

529.

Policy RE6 applies to proposals for the re-use of rural buildings that require planning permission. The policy applies both to traditional and modern buildings providing that their form, bulk and design are in keeping with their surroundings and they respect local building styles and materials including impact on character of the area, the historic environment, wildlife, Green Belt and accessibility.

POLICY RE6: Re-Use Of Rural Buildings

Conversion of a building or buildings to a new use in the countryside outside the scope of Policies RA1, RA2 and GB2 will only be permitted, provided:

1 its form, bulk and general design is in keeping with its surroundings and respects the style and materials of the existing building

2 the building is not of temporary or insubstantial construction and not capable of conversion without substantial or complete reconstruction or requires major extension

3 the proposal would enhance visual amenity and not harm ecological function (e.g. bat roost)

4 the proposal does not result in the dispersal of activity which prejudices town or village vitality and viability

5 where the building is isolated from public services and community facilities and unrelated to an established group of buildings the benefits of re-using a redundant or disused building and any enhancement to its immediate setting outweighs the harm arising from the isolated location

6 the development would not result, or be likely to result, in replacement agricultural buildings or the outside storage of plant and machinery which would be harmful to visual amenity;

7 in the case of buildings in the Green Belt, does not have a materially greater impact than the present use on the openness of the Green Belt or would conflict with the purposes of including land within the Green Belt.

Visitor accommodation

530.

The NPPF is supportive of sustainable rural tourism and leisure developments which benefit businesses in rural areas, communities and visitors provided it respects the character of the countryside. The aim of the Plan is to provide a positive context for encouraging the provision of smaller scale visitor accommodation in such locations.

531.

Conversions of existing rural buildings to visitor accommodation will be considered in the context of Policy RE6. Applications for visitor accommodation should not be seen as a mechanism to gaining permanent residential use of the accommodation.

532.

Policy RE7 also seeks to protect the existing housing stock and ensure that tourist development does not result in a reduction in the number of dwelling spaces. This is historically seen as especially significant in Bath given the shortage of land available for development and the City's limited ability to absorb increasing numbers of visitors at peak times without having a detrimental effect on residential amenity and character.

533.

This means in the case of a larger house in single family occupancy (4 or more bedrooms), with parking available within its curtilage or in the vicinity may be considered suitable for use as a hotel or guest house with an unspecified number of bedrooms, but only if part of the property is reserved as one or more self-contained residences.

POLICY RE7

Visitor Accommodation

New visitor accommodation

1 Permission will be granted for new build visitor accommodation provided:

a it is in a sustainable location or, accessible by a choice of transport modes

b there are no other buildings available and suitable for conversion

c the scale of the proposal will not harm the character or appearance of the countryside

d the materials, form, bulk and general design of buildings are in keeping with their rural surroundings

e there is safe and convenient access to the highway network and there are no significant adverse impacts on the local highway network

f the proposal would not adversely affect protected species or habitats

2 Where a proposal for visitor accommodation is approved appropriate planning conditions will be used to prevent permanent residential use of the accommodation.

Change of use from a dwelling to visitor accommodation

3 The change of use of an existing dwelling to visitor accommodation will be permitted provided that:

a for large residential properties, a substantial private residential unit is retained, and any existing or proposed parking within the curtilage of the property which does not detract from the appearance of the property is made permanently available; and

b for small residential properties, a satisfactory residential accommodation is retained which is not occupied independently of the proposed use.

CENTRES AND RETAILING

534.

Along with Bath City Centre, the District is served by a diverse network of town, District and local centres of varying size. In addition to providing facilities like shops, cafés, pubs, post offices and banks, centres also include varying levels of community facilities, work places and leisure facilities. Many centres are a focus for public transport services and most offer a chance to access essential facilities close to people's homes. Policy CP12 therefore aims to support this network of accessible centres as key focuses for development and as the principal locations for shopping and community facilities as well as offices, local entertainment, art and cultural facilities. Many centres contain a range of independent specialist shops which are important to retain as they contribute to the uniqueness of each centre. Centres are also well placed to be a focus for some higher density residential development which can both benefit from the services provided and help to sustain the viability of those services. This approach is reflected in the place based sections of the Core Strategy.

535.

Shopping remains of key importance to the centres. The availability of a good range of convenience (food) and comparison (non-food) shops makes an important contribution to people's quality of life. It is important that centres provide for choice, vitality and diversity and include a good balance of convenience, comparison, local and national traders. Maintaining and enhancing the retail function of centres is important in enabling residents and visitors to meet their shopping needs in the most sustainable way, in the most accessible locations. Shopping provision also makes an important contribution to a vibrant and vital public realm.

536.

Shopping habits have however changed over the past decade. Nationally, high streets are becoming an increasingly social environment, as well as a place to shop. Many high streets have seen a big rise in the number of evening attractions, such as cafés, restaurants and leisure facilities including health clubs. High street local convenience retailing has also seen a large increase in floorspace. At the same time, some traditional retailing sectors, such as travel agents, DVD rental shops and photo processing shops have declined.

537.

National planning policy states that local plans should:

- define a network and hierarchy of centres
- define the extent of town centres and primary shopping areas based on a clear definition of primary and secondary frontages, and set policies which make clear which uses will be permitted in such locations
- allocate a range of suitable sites in town centres to meet the needs for retail, leisure, office and other main town centre uses in full
- set policies for the consideration of proposals for main town centre uses which cannot be accommodated in or adjacent to town centres

538.

Walcot Street, Margaret's Buildings and Lansdown Road are included as local centres for the purposes of this policy, but it is recognised rather than primarily serving local day to day needs they play a more specialist retail role, supplementing the city centre retail offer, supporting small businesses and serving a wider catchment area.

539.

London Road has been identified as a declining centre, and is also identified in equalities mapping as an area of deprivation. Through work on the Placemaking Plan, the Council will consider its policy options for this centre, including the scope for consolidating and strengthening its retailing role, enabling its regeneration, supporting business development, and improving its appearance as a key route into the central area.

540.

Protection of shops within the centres defined in the hierarchy is covered by Local Plan Policy CR.3 S.5 and S.8.

In 2008 the Council undertook work on a retail strategy that included an assessment of the amount and type of new retail floorspace required during the plan period. Since that time circumstances have changed e.g. economic recession and the Southgate development in Bath has opened. A re-assessment of the need for new retail floorspace is therefore being undertaken. Policy CP12 along with policies in the place based sections, sets the framework for new retail development that will be taken forward in the Placemaking Plan, but does not propose specific levels of retail development.

541.

Active ground floor uses referred to in Policy CP12 are generally those falling within use Classes A1 to A5 but can also include other town centre uses which are visited by large numbers of people.

POLICY CP12 Centres and retailing

The centres within the hierarchy of shopping centres set out below and as defined on the Policies Map will be maintained and enhanced:

City Centre

Bath City Centre

Town Centres

Keynsham Town Centre, Midsomer Norton Town Centre, Radstock Town Centre

District Centres

Moorland Road, Bath

Local Centres (urban)

In Bath: (1) Chelsea Road, (2) Weston High Street, (3) Julian Road, (4) St James Square (5) Margaret's Buildings, (6) Lansdown Road, (7) Camden Road & Fairfield Road, (8) Larkhall High Street (9) London Road, (10) Nelson Place East & Cleveland Place, (11) Walcot Street, (12) Widcombe Parade, (13) Bathwick Street, (14) Bathwick Hill, (16) Bear Flat, (17) The Avenue, Combe Down, (18) Bradford Road), (19) Frome Road, (20) Upper Bloomfield Road, (21) Twerton High Street, (22) Mount Road.

In Keynsham: Queen's Road and Chandag Road

In the Somer Valley: Westfield Paulton, Peasedown St. John and Timsbury

Local Centres (rest of the District)

Bathampton, Batheaston, Chew Magna, Saltford, and Whitchurch

Retail development, offices, leisure and entertainment uses, markets, community facilities, arts, culture and tourism uses will be primarily located within, or where appropriate, adjoining the centres in the identified hierarchy of centres as required by Policy CR1. Centres will also be the focus for higher density forms of residential development provided the centre is suitable for such development and has a high level of accessibility by public transport, cycling and walking.

Uses which contribute to maintaining the vitality, viability and diversity of centres within the hierarchy will be encouraged. Active ground floor uses will be maintained and enhanced.

Retail development within the centres listed within the hierarchy and defined on the Policies Map will be permitted, subject to Policy CR3, where it is:

a Of a scale and type consistent with the existing retail function and character of the centre and

b Well integrated into the existing pattern of the centre.

Delivery:

The place-based sections for Bath, Keynsham, Midsomer Norton and Radstock will set out more detail on the approach to the centres contained in those settlements.

The boundaries for all of the centres listed within the hierarchy are defined on the Policies Map. Other than the Bath city centre boundary these boundaries reflect those established in the Bath & North East Somerset Local Plan. The Placemaking Plan will review these boundaries and identify sites for development. It will also review and define, where appropriate, the primary shopping areas and retail frontages in the larger centres. These designations will be supported by development management policies in the Placemaking Plan to guide decisions on individual planning applications.

An updated retail study will be undertaken to support future planning decisions and guide the Placemaking Plan.

Main town centre uses will be subject to the sequential and impact tests set out in the NPPF, Policy CR1 and Policy CR2.

New Retail Development

542.

NPPF paragraph 23 requires Local Plans to allocate a range of suitable sites to meet the scale and type of retail development needed in town centres. It is important that, as appropriate, this need is met in full and is not compromised by limited site availability. The Council is required in NPPF paragraph 161 to assess the quantitative and qualitative needs for land or floorspace for retail development over the plan period.

543.

The Council has therefore undertaken an update of its 2011 retail study that includes an assessment of the need for new retail floorspace within the district up to 2029. The quantitative results of this work are shown in the table below. There is also a qualitative need for improving the existing retail offer in the town centres. Sites are identified within the site allocations section of the Placemaking Plan to meet this quantitative and qualitative need.

544.

Whilst the evidence base demonstrates that there is capacity for an additional 31,000 sq.m. of comparison retail floorspace in Bath by the end of the plan period, there is not enough land in the city to meet this and other land use demands that have been identified by the evidence. This is because Bath is a small city with relatively few development sites. The unmet need is not considered to represent exceptional circumstances for developing in the Green Belt and in any case is not viewed as overriding the great weight that needs to be afforded to the significance of heritage assets, not least the World Heritage Site.

545.

The Council has therefore prioritised which land uses should be provided on the limited land available. As set out in the West of England City Deal agreed with Government, the main focus in the Enterprise Area is the delivery of economic and employment growth with up to 9,000 jobs planned to be delivered by 2030. This requires the delivery of 60,000 sq.m. (gross) of new office floorspace within the plan period, and predominately within the central area.

546.

Whilst about 6,000 sq.m. of comparison retail development is anticipated to be delivered over the plan period on various development sites throughout the city centre, and a similar quantum of net floorspace may be provided at Sydenham Park (subject to it complementing the city centre as it is in a well-related, but out of centre location), there will still be a shortfall. The Council is therefore unable to meet its objectively assessed longer term need, and will be undertaking further retail studies to review this need requirement and to ascertain how to ensure that its retail offer is maintained and enhanced, without growth.

547.

In the Somer Valley, retail floorspace is being allocated at a variety of sites, including South Road Car Park and Midsomer Norton High Street Core / Brewery site (as part of the strategy for Midsomer Norton Town Centre), the former Welton Packaging Factory (local needs), and Charlton Timber Yard and Radstock Railway Land. This is consistent with the overall vision for the Somer Valley which envisages Midsomer Norton as the principal retail centre complemented by Radstock Town centre and the various Local Centres which provide for more local needs. The implementation and delivery of these sites will be monitored against the projected capacity as part of the AMR.

Table 8: Projected Quantitative Capacity for Additional Retail Floorspace 2011–2029 (GVA 2014 Retail Assessment – net figures in sqm)

	2014	2019	2024	2029
Bath				
Convenience	139	1,237	2,394	3,524
Comparison	7,679	11,642	20,554	31,044
Keynsham				
Convenience	No surplus quantitative capacity for additional floorspace unless market share can be raised; however there is a qualitative need to improve the existing retail offer.			
Comparison				
Midsomer Norton & Radstock				
Convenience	1,949	2,315	2,703	3,078
Comparison	922	1,297	2,322	3,588

Proposals for retail development outside of centres – the Sequential Test

548.

The site allocations sections of the Plan identify where new retail floorspace within is intended to be met. However, other retail proposals outside of the centres may still come forward. The sequential test guides main town centre uses towards town centre locations first, then, if no town centre locations are available, to edge of centre locations, and, if neither town centre locations nor edge of centre locations are available, to out of town centre locations, with preference for accessible sites which are well connected to the town centre. It supports the viability and vitality of town centres by placing existing town centres foremost in plan-making and decision taking. The NPPG states that Local Plans should contain policies to apply the sequential test.

549.

For retail purposes, edge of centre relates to a location that is well connected and up to 300m of the Primary Shopping Area (where defined). This means that locations within a centre but outside the Primary Shopping Area are considered to be edge of centre. For all other main town centre uses it relates to a location within 300m of a town centre boundary. For office development, this includes locations outside the town centre but within 500m of a public transport interchange. The sequential approach should not be applied to applications for small scale rural offices or other small scale rural development.

550.

It is for the applicant to demonstrate compliance with the sequential test. Failure to undertake a sequential assessment could in itself constitute a reason for refusing permission.

551.

In line with paragraph 27 of the NPPF, where a proposal fails to satisfy the sequential test, it should be refused.

552.

The PPG checklist should be used when considering what should be taken into account in determining whether a proposal complies with the sequential test.

553.

Use of the sequential test should recognise that certain main town centre uses have particular market and locational requirements which mean that they may only be accommodated in specific locations. Robust justification must be provided where this is the case. Land ownership does not provide such a justification.

POLICY CR1: Sequential Test

Retail and other main town centre uses (including commercial leisure) should be located within the centres identified on the Policies Map and in Core Strategy Policy CP12.

Where there are no suitable and viable sites available to meet the needs for such uses within centres, edge of centre locations may be appropriate. Sites should be in a location readily accessible on foot, by cycle and by public transport, with preference given to sites that are well connected to the town centre.

Out of centre development of main town centre uses will only be acceptable where:

i No suitable or viable centre or edge of centre sites are available and the proposal would be in a location readily accessible on foot, by cycle and by public transport, with preference given to sites that are well connected to the town centre; or

ii The proposal is of a small scale (less than 280 sqm gross floorspace), located within a settlement with a Housing Development Boundary, and aimed at providing for local needs (refer to Policy CR4).

In assessing the availability, suitability and viability of alternative sequentially preferable sites, alternative formats for the proposed uses should be considered. Applicants and the Local Planning Authority should both demonstrate flexibility on format and scale in relation to the form of the proposed development and the consideration of alternative sites.

The application of the sequential test should be proportionate and appropriate for the given proposal.

If there are no suitable sequentially preferable locations, the sequential test is passed.

In all cases regard should also be given to Policy CR2.

Impact Assessments

554.

Paragraph 26 of the NPPF states that when assessing applications for retail, leisure and office development outside of town centres, which are not in accordance with a Local Plan, Local Planning Authorities should require an impact assessment if the development is over a proportionate, locally set floorspace threshold.

555.

The purpose of the test, as defined in the NPPG, is to ensure that the impact over time of the proposal on existing town centres is not significantly adverse. The test relates to retail, office and commercial leisure development only. The impact must be assessed in relation to all town centres that may be affected.

556.

The B&NES Retail Study Stage 2 Report (2015) sets out the justification for setting a locally set floorspace threshold.

557.

Proposals for small scale local shops (under 280sqm) should refer to Policy CR4.

POLICY CR2: Impact Assessments

Outside the scope of Policy CR4, retail, office and commercial leisure development outside of centres will not be permitted if:

- i It would be liable to have a significant adverse impact on the vitality, viability and diversity of existing centres; or
- ii It would have a significant adverse impact on existing, committed or planned investment in a centre or centres in the catchment area of the proposal.

Within Bath, an Impact Assessment will be required for Use Class A1-5 retail proposals over 500sqm (gross) that are located outside of the designated town centres and not in accordance with the Local Plan.

For the rest of the District, an Impact Assessment will be required for Use Class A1-5 retail proposals over 280sqm (gross) that are located outside of the designated town centres and not in accordance with the Local Plan.

For commercial leisure proposals anywhere in the District, an Impact Assessment will be required for schemes over 1,000sqm (gross) that are located outside of a designated town centre and not in accordance with the Local Plan.

For office proposals anywhere in the District, an Impact Assessment will be required for schemes over 2,500sqm (gross) that are located outside of a designated town centre and not in accordance with the Local Plan.

The application of the impact test should be proportionate and appropriate for the given proposal.

558.

It is for the applicant to demonstrate compliance with the impact test in support of relevant applications. Failure to undertake an impact test could in itself constitute a reason for refusing permission. Impact assessments provided by applicants should be fully scoped out with the Local Planning Authority prior to the submission of a planning application and be based upon an up-to-date evidence and information base. The PPG should be used to determine the key steps to be taken when carrying out an impact assessment, but in general impact assessments should include information on:

- The cumulative impact of the proposal on existing, committed and planned investment in a centre or centres in the catchment area of the proposal;
- The impact of the proposal on town centre vitality and viability, including local consumer choice and the range and quality of the comparison and convenience retail offer;
- The impact of the proposal on allocated sites outside town centres being developed in accordance with the development plan; and
- The impact of the proposal on in-centre trade/turnover and on trade in the wider area, taking account of current and future consumer expenditure capacity in the catchment area up to five years from the time the application is made.

559. Compliance with the sequential and impact tests does not guarantee that permission is granted. The Council will consider all material considerations in reaching a decision.

Primary Shopping Areas and Primary Shopping Frontages

560. The boundaries of Town Centre Primary Shopping Areas and Primary Shopping Frontages will be defined on the Policies Map.

561. Policy CR3 aims to support vitality and viability and promote diversity within the centres identified in Core Strategy Policy CP12 by maintaining a healthy mix of uses within a variety of unit sizes capable of accommodating a range of retailers and associated uses.

562. Primary Shopping Frontages are defined where there will be a high proportion of Use Class A1 retail uses. A Primary Shopping Area is a defined area where Class A1-A5 retail development is concentrated. Together they represent the retail core of centres. The Policies Map shows the boundaries of Primary Shopping Areas and Frontages within the main centres of the District. This is important as the NPPF states that when considering the sequential test for retail development, an 'edge of centre' location is deemed to be one that is well connected and up to 300m from the Primary Shopping Area.

563. The previous Local Plan was very restrictive about the uses permitted within Primary Shopping Frontages (the loss of an A1 shop use from the ground floor was not permitted). This has been very successful in maintaining the Primary Shopping Frontages as predominantly A1 retail areas. Conversely, it has also had the effect of restricting other uses such as cafes and restaurants to areas outside of the frontages, and concentrating them within certain areas of the city centre.

564. Consultation feedback suggested that in some areas, these uses had become over concentrated and that there was a negative impact on resident's amenity, resulting from noise and anti-social behaviour. Other feedback suggested that some non-A1 uses, such as banks and cafes can have a positive effect on footfall within centres.

565. Policy CR3 therefore introduces a more flexible approach in relation to Primary Shopping Frontages, acknowledging that retail can benefit from having diverse, non-A1 neighbours, creating a richer mix of footfall. It allows the Local Planning Authority to maintain a primary shopping function in the defined frontages whilst allowing other Class A uses which can also add to the attractiveness of, and vitality within, a town centre. However, it is imperative that a balance is maintained and the focus of the centres remains retail (A1) based.

566. The main centres were subject to a GOAD survey in 2014 which forms the basis of the definition of Primary Shopping Frontages and Primary Shopping Areas. A Frontage is considered to be the active parts of the shop, usually containing the shop entrance and/or large shop window.

567. Outside of the Primary Shopping Frontages, but within a Primary Shopping Area or Town Centre, the strategy seeks to ensure that the range of uses which are provided contribute to the health of the town centre.

568. Policy CR3 is subject to the limitations presented by national permitted development rights and prior approval regime which affects some retail uses. The latest Town and Country Planning (General Permitted Development) (England) Order should be consulted.

POLICY CR3: Primary Shopping Areas And Primary Shopping Frontages

Development within Primary Shopping Frontages

Within Primary Shopping Frontages identified on the Policies Map development will be expected to maintain or provide active ground floor uses.

Within Primary Shopping Frontages change of use of shops (Use Class A1) to another use will not be permitted (subject to permitted development rights) unless the proposed use would:

- i** Make a positive contribution to the vitality, viability and diversity of the centre; and
- ii** Not fragment any part of the Primary Shopping Frontage by creating a significant break in the shopping frontage; and
- iii** Not result in a loss of retail floorspace of a scale harmful to the shopping function of the centre; and

iv Be compatible with a retail area in that it includes a shopfront with a display function and would be immediately accessible to the public from the street.

Development outside Primary Shopping Frontages

Outside the Primary Shopping Frontage but within Primary Shopping Areas and Town Centres, the loss of Use Class A1 retail floorspace will be permitted provided that a healthy balance and diversity of uses is retained and concentrations of uses other than Use Class A1 are avoided. The proposed use should still attract pedestrian activity and footfall to the centre and should not significantly harm the amenity of the area. The proposed use should not have an unacceptable impact on the vitality, viability and diversity of the centre.

569.

In order to assist applicants and the decision maker, applications should include the following information:

- The location and prominence of the premises;
- The size and width of the premises;
- The number and distribution of other existing and committed non-A1 uses within the defined primary retail frontage (including any premises subject to current Permitted Development changes of use);
- Where applicable, the length of vacancy of the premises and evidence of marketing for the current permitted use;
- The nature and character of the proposed use; and
- The design of the shop-front (with reference to Policy D.9 and where applicable individual Conservation Area Appraisals, shop front guides and design guides).

Dispersed Local Shops

570.

Outside the centres identified in Core Strategy Policy CPI2 and on the Policies Map there are many small shops spread throughout the District both within the urban areas and in villages. These can often serve day to day needs and offer valuable social and community benefits but a wide range of factors has contributed to a gradual reduction in the number of such units. While most of these factors are beyond the scope of planning powers the Council will seek to encourage the provision of new small shops in suitable cases and will resist the change of use of units with the potential to provide continuing key retail services to their local residential communities.

571.

Where appropriate the provision of small-scale local shops should be encouraged. They should be located so as to be accessible by a variety of means of transport and they should not adversely impact upon the amenity of existing or new residents. In rural areas provision may also be made via farm shops. This is covered under Policy RE3. Whilst such shops can provide a useful service, their potentially adverse impact on the viability of existing village shops would need to be carefully considered (refer to Policy CR1 and CR2).

POLICY CR4: Dispersed Local Shops

Outside the centres defined in Core Strategy Policy CP12 and on the Policies Map, proposals for development of appropriately located small-scale local shops (less than 280sqm gross floorspace which provide for local needs) within a settlement with a defined Housing Development Boundary will be supported.

Proposals over 280sqm gross floorspace will be considered against Policy CR1 and Policy CR2.

Outside the centres defined in Core Strategy Policy CP12 and on the Policies Map proposals for development of appropriately located small-scale local shops (less than 280sqm gross floorspace which provide for local needs) within a settlement with a defined Housing Development Boundary will be supported.

Markets

572. Markets contribute to the range of shopping opportunities and choices within the District and also to the cultural identity and local economy of different centres. They provide an important outlet for independent and start-up businesses and can make an important contribution to the diversity of retailing in particular areas. The NPPF states that local authorities should retain and enhance existing markets and, where appropriate, re-introduce or create new ones, ensuring that markets remain attractive and competitive. Core Strategy Policy CP12 encourages their use and states that markets will be primarily located within, or where appropriate, adjoining town centres.

573. It is important that the positive benefits that a market can bring to a centre are not reduced by a detrimental impact upon pedestrian movement around a town centre and on the public realm (cross refer to Policies D1, D3 and D4).

London Road Local Centre

574. The London Road has been a key entrance to Bath since Roman times, and is of great architectural and historic interest due to the high density of listed buildings. The area has a long and proud tradition of community. However, London Road Local Centre was identified in the Core Strategy as a declining centre, and an area of deprivation. The Core Strategy committed the Council to consider policy options for the centre, including the scope for consolidating and strengthening its retailing role, enabling its regeneration, supporting business development and improving its appearance as a key route into the central area.

575. In recognition of this, the Council has invested over £1 million to deliver a combination of improvement projects to the look, feel and appearance of this area, creating the conditions needed for rejuvenation and encouraging greater private sector investment. The scheme includes improvements to cycling provision, landscaping, and parking provision.

576. This investment, together with the more flexible approach proposed in Policy CR3 will help provide the conditions for reversing the decline of this centre.

577. The London Road and Snow Hill Partnership have developed a vision for the future of London Road:

London Road Vision

The London Road is a key gateway to the city centre of Bath which has been enhanced by recent public realm improvements. It will retain and enhance its reputation as a destination for shopping, building on its strengths as a retail destination for furniture, antiques and unusual artefacts of decorative interest. Retaining car parking for shoppers is essential. The area will continue to seek improvements to its appearance and public realm, taking inspiration from its architectural and historic context, in order to remain a vibrant and vital place and encourage more people to travel through it by foot or cycle. Improvements to air quality will be sought, in line with the Bath Transport Strategy, by reducing the impact of vehicles by supporting trips that are made by means other than the car, particularly encouraging more people to use public transport. Further tree planting along London Road will be encouraged, and the green spaces around the area will be retained and enhanced.

Permitted Development Rights and Prior Approval affecting Centres and Retailing within B&NES

578.

The Government has introduced new national permitted development rights in order to make it easier for businesses to make best use of their premises; deliver more homes; support high streets; simplify the change of use system; and support sustainability by promoting the reuse of buildings. They are a national grant of planning permission which allow certain building works and changes of use to be carried out without having to make a planning application. The Prior Approval procedure requires a developer to provide some basic information about a proposed extension and involves a process of consultation with immediate neighbours. These rights mostly sit within Part 3 of Schedule 2 to the General Permitted Development Order.

579.

The GPDO may in some cases override the Development Plan.

580.

Where the GPDO refers to 'key shopping areas', The Local Planning Authority interprets these as the designated centres identified in Core Strategy Policy CP12.

PROMOTING SUSTAINABLE TRANSPORT

Transport and Movement

581.

The approach of the Local Development Framework is to continue the longstanding theme of reducing car dependency and working towards making walking, cycling and use of public transport, the more attractive options for travel. This approach is embodied in the strategic objectives of the Core Strategy, and the place based sections in seeking to enhance the walking, cycling and public transport network from existing communities to jobs, local services, facilities and attractions. The Council will continue to work with neighbouring authorities to address these issues.

582.

The B&NES highway network remains heavily trafficked highlighting the need to undertake transport and access improvements and major capital infrastructure projects to facilitate growth in housing numbers and jobs, to minimise the adverse effect of traffic, and to enable environmental improvement to be made to existing centres. The Council will continue to safeguard routes for the Whitchurch bypass and Temple Cloud/Clutton bypass and recognises the need for studies to assess the Saltford bypass and an A46/A36 link

583.

This approach is in line with national objectives and the Council's Sustainable Community Strategy. The approach also follows on from the five key goals of the emerging Joint Local Transport Plan (JLTP3), which are:

- Reduce carbon emissions;
- Support economic growth;
- Promote accessibility;
- Contribute to better safety, security and health;
- Improve quality of life and a healthy natural environment.

Creating Better Places

584.

This approach brings with it a wide range of benefits. The most significant, long term benefit to B&NES is that this approach creates more economically successful, more sociable, healthier, more accessible and more inviting places in which to live, work and visit.

585.

Whilst good accessibility is of absolute importance for places to function effectively, better and more sociable places are created where people dominate, rather than vehicular traffic. Streets are not just for movement; they form the shared public space between buildings, where city, town or village life takes place. This is particularly the case in our historic settlements that have not been designed to accommodate the current levels of vehicular traffic that they often have to endure. There is a strong correlation between an enhanced public realm and better places; the experience of numerous cities around the world is testament to this approach.

586.

Measures that support the shift to more sustainable modes of transport and that improve levels of accessibility to and within Bath, Keynsham, Somer Valley and the Rural Areas will be supported and promoted.

587.

Other critical benefits to undertaking this approach include meeting our reduction in CO2 emission targets, addressing rising obesity levels and general health risks arising through a lack of physical activity, and enabling improvements to be made to our historic environment and public realm.

Climate Change and Air Quality

589.

JLTP3 states 'In 2008, road transport represented 32% of West of England CO2 emissions. This amounts to some 2.16 tonnes per head of population, similar to the national average of 2.13 tonnes. In reducing road transport carbon emissions JLTP3 focuses on:

- Promotion of lower carbon choices
- Providing alternatives to the car
- Influencing travel behaviour and managing travel demand
- Workplace and school travel plans
- Personalised travel planning
- Improvements to walking and cycling infrastructure
- Public transport enhancements
- Integration of travel modes

- Better information
- Demand management and reducing the need to travel through technology and spatial planning

- Introduction of an appraisal of the impact of scheme/programme/policy options to inform their selection or otherwise for inclusion in JLTP3 delivery plans

- Robust understanding of the contribution to carbon reduction (or carbon increase) that each scheme, programme, policy is expected to deliver

590.

The reduction of the adverse effects of transport on climate change and air quality, particularly in Air Quality Management Areas (AQMA) in Bath and Keynsham and in future AQMAs, will be managed in accordance with the NPPF.

Health, Obesity and Well Being

591.

Continuing with the shift to more active travel is a key way of helping to tackle the pressing issues associated with poor health, rising obesity and general well-being. It is estimated that by 2050 almost 60% of the UK population could be obese with the economic cost reaching £49.9 billion at today's prices (Government Office of Science, Foresight Tackling Obesities: Future Choices, 2007). Increased levels of walking and cycling in particular will help to achieve the strategic objective of promoting health and well-being.

Historic Environment and Public Realm

592.

Improvements to parts of the District's historic settlements will become possible by reducing the volume of traffic using historic streets and spaces. The management of the highway network, particularly in local centres, residential areas, places of higher pedestrian footfall and/or areas of historic significance, to support the development of stronger communities and the creation of high quality public realm and better places is supported by the Local Development Framework. This approach is reflected in the Council's Public Realm and Movement Strategy for Bath City Centre.

Promoting sustainable travel

593.

It is important that the need for new development is balanced with minimising traffic congestion and making places more accessible by sustainable modes of transport. This reflects the approach outlined in the Core Strategy and 'Getting Around Bath - A Transport Strategy for Bath' which place emphasis on the need to reduce car dependency and promote sustainable modes of transport. This is key in making places more accessible for all and healthier environments.

594.

One of the core principles of the NPPF is to '*actively manage patterns of growth to make fullest possible use of public transport, walking and cycling, and focus significant development in locations which are or can be made sustainable.*' This principle will underpin the sustainable transport policies in this Plan.

595.

'Getting Around Bath - A Transport Strategy for Bath' was adopted in November 2014. Its principal objectives are:

- Supporting and enabling economic growth, competitiveness and jobs;
- Improving air quality and health, reducing vehicle carbon emissions;
- Promoting sustainable mobility;
- Widening travel choice;
- Widening access to opportunities: jobs/learning/training;
- Safeguarding and enhancing the unique historic environment and World Heritage Site status; and
- Improving the quality of life in the city.

596.

To complement the Bath Transport Strategy, further transport strategies are being progressed for other areas within B&NES, initially Keynsham. Transport Strategies for Somer Valley and Chew Valley are in development. The 'Getting Around Keynsham - Transport Strategy' has the following objectives:

- Minimising the future increase in traffic congestion;
- Supporting and enabling the local economy;

- Promoting sustainable mobility;

- Widening travel choice;

- Improving connections, particularly to improved rail services and the town centre;

- Widening access to opportunities: jobs, learning, training, leisure and other local facilities;

- Improving air quality and reducing vehicle carbon emissions;

- Improving the quality of life for residents;

- Ensuring that all traffic management and pedestrian schemes are designed to take mobility needs in to account; and

- Maximising safety for all transport users.

Policy aims

- Enable a shift to more sustainable modes of transport

- Need to identify and safeguard routes crucial to widen transport choice and support major new development

- Need to provide safe sustainable transport routes

- Promote walking and cycling to promote health and wellbeing

- Improve accessibility for people of all ages and mobility and sensory abilities

597.

The NPPF recognises the key role transport policies have in facilitating sustainable development and contributing to wider sustainability and health objectives by supporting and promoting sustainable transport modes, so that people can choose how they travel. It also acknowledges that different place specific policy solutions and measures may be required.

598.

The vision for the Joint Local Transport Plan 3 (JLTP3) is to seek an affordable, low carbon, accessible, integrated, efficient and reliable transport network to achieve a more competitive economy and better connected, more active and healthy communities by 2026.

599.

Policy ST1 seeks to help achieve these aims and objectives by setting out the key principles which should be addressed when designing a development.

POLICY ST1: Promoting Sustainable Travel

In order to ensure delivery of well-connected places accessible by sustainable means of transport, planning permission will be permitted provided the following principles are addressed:

- 1** reduce the growth and the overall level of traffic and congestion by measures which encourage movement by public transport, bicycle and on foot, including traffic management and assisting the integration of all forms of transport;
- 2** reduce dependency on the private car;
- 3** give priority to pedestrian and cycle movements, and have access to high quality public transport facilities;
- 4** provide and enhance facilities for pedestrians, cyclists and the mobility impaired including segregated provision that is fit for purpose;

5 safeguard, enhance and extend the network of public rights of way and cycle routes;

6 reduce the adverse impact of all forms of travel on the natural and built environment;

7 ensure development does not prejudice the efficient functioning and acceptable development of the railway network;

8 promote the use of car clubs and electric cars;

9 ensure access to high quality public transport facilities is achieved by improving existing and providing new public transport facilities which would increase the proportion of journeys made by public transport; and

10 support and promote measures which reduce the levels of traffic pollution in the interests of improving health and quality of life and reducing harmful impacts on the built and natural environment.

Sustainable Transport Routes

600.

B&NES Council and Sustrans have carried out a wide ranging review of cycle routes and developed a number of cycle proposals for Chew Valley, Keynsham, Midsomer Norton, Radstock and Bath.

601.

There are sections of safeguarded former railway land not included in Sustrans' recommended cycle routes, and whilst further work needs to be undertaken in the context of the Sustrans review, the Council will continue to give policy protection to these. This will include the line of the sustainable transport link from the Newbridge area to Bath city centre serving the Bath City Riverside Enterprise Area. Land safeguarded for Sustainable Transport purposes is shown on the Policies Map.

POLICY ST2: Sustainable Transport Routes

Development which prejudices the use of former railway land for sustainable transport purposes as shown on the Policies Map will not be permitted.

Recreational Routes

602.

National planning policy promotes the protection and enhancement of public rights of way (PROW) and access including making links to existing rights of way networks. Bath and North East Somerset has an extensive network of PROW including a number of long distance and circular routes which form an integral part of the overall leisure and recreational provision.

603.

The Council aims to develop a safe, convenient, efficient transport infrastructure which encourages and facilitates walking and cycling, and which minimises reliance on, and discourages unnecessary use of, private cars, especially for local trips. This will help increase the role of walking and cycling as key transport modes and to assist in reducing the use of private cars, by raising the status of walking and cycling and promoting them as safe and healthy means of transport.

604.

This accords with 'Getting Around Bath - A Transport Strategy for Bath', which identifies that walking is the highest modal priority in the transport strategy.

605.

Policy ST2A seeks to ensure that any publicly accessible routes are not adversely affected by development proposals. Where a recreational route follows the line of a former railway, its course is protected as a sustainable transport route.

POLICY ST2A: Recreational Routes

1 Development which adversely affects the recreational and amenity value of, or access to, public rights of way and other publicly accessible routes for walking, cycling and riding will not be permitted, unless any harm can be successfully mitigated.

2 A development proposal affecting a publicly accessible recreational route will be expected to maintain and/or incorporate the route within the scheme and, depending on the location, the Council will seek to negotiate the provision of additional linkages between urban areas and the wider countryside, open spaces and the River or Canal.

3 Development that adversely impacts on the established cycle routes shown on the Policies Map will not be permitted, unless any harm can be successfully mitigated.

Transport infrastructure

610.

The Core Strategy highlights the need to carry out transport and access improvements and to secure the necessary capital infrastructure projects to enable the increase in housing numbers and jobs to be delivered. Core Strategy Policy CP13 also requires that new development is supported by the timely delivery of physical infrastructure necessary to support that development.

611.

The Council inherited a number of highway improvement schemes from the former Avon County Council. The only former scheme being pursued is the improvement of the Lower Bristol Road (A36) east of Fieldings Road to Churchill Bridge, which now includes the Pines Way gyratory as shown on the Policies Map. This route is safeguarded to provide for future improvements to bus priority, cycle and pedestrian facilities, and public realm enhancements. The principles listed in Policy ST3 will be expected to apply to the implementation of the scheme.

612.

The Council recognises the need for further studies to assess the A4 Saltford bypass, and an east of Bath link designed to remove through traffic. The Keynsham Transport Strategy recognised the need to provide an alternative route for traffic seeking to travel between the A4 and the A37. B&NES will work with Bristol & South Gloucestershire to develop a solution to this issue.

Development of transport infrastructure

613.

As with other development well planned solutions are paramount in the design of transport infrastructure proposals. Core Strategy Policy CP6(1) requires high quality and inclusive design of schemes, including transport infrastructure, which reinforces and contributes to its specific local context, creating attractive, inspiring and safe places.

614.

The Council aims to give as much attention as possible to the details of both public and private proposals. There will also be a rigorous assessment of the need for the scheme.

615.

Policy ST3 seeks to ensure that transport infrastructure is designed to the highest standards possible. 'Getting Around Bath – A Transport Strategy for Bath' highlights that consideration for the needs of people with mobility impairments is regarded as a core element of the strategy. This is reflected in Policy ST3.

POLICY ST3: Transport Infrastructure

Within the context of Core Strategy Policy CP6(1) the development of transport infrastructure will only be permitted provided that the following requirements have been met:

- 1** There is no unacceptable impact on environmental assets and amenity including the World Heritage Site and its setting, Areas of Outstanding Natural Beauty and Natura 2000 sites (SACs/SPA);
- 2** The visual and functional impact of the scheme and any associated surface treatment, street furniture, signing, road markings, roadside verges and lighting upon the character of the area is minimised;
- 3** The impact of noise and other forms of pollution on surrounding land uses from traffic likely to be generated by the proposal is minimised;
- 4** The needs of pedestrians including those with impaired mobility, cyclists and horseriders are met;

5 The need for provision in appropriate cases of street furniture which aids security of premises without adversely affecting pedestrian circulation;

6 The environmental benefits to be secured through implementation of the scheme and any additional traffic management or calming measures needed to maximise those benefits should be clearly articulated;

7 The quality, patronage and efficiency of public transport operations must not be compromised;

8 The response time of emergency services must not be compromised; and

9 The acceptable provision for the transportation of materials to and from the site or disposal of spoil during construction.

All highway infrastructure will be required to comply with national guidance and standards set out in 'Manual for Streets', 'Manual for Streets 2 - wider application of the principles', the 'Design Manual for Roads and Bridges' and any subsequent updates to these documents.

Rail freight facility Westmoreland Station Road, Bath

616.

The NPPF discusses the provision of viable infrastructure necessary to support sustainable development including rail freight interchanges. The railhead at Westmoreland Station Road, Bath has been used to transfer and transport compacted waste and may have the potential to be used in the transportation of aggregates in the future. It has been safeguarded through successive Local Plans and Policy ST4 continues this role.

POLICY ST4: Rail Freight Facility

Land at Westmoreland Station Road, Bath as defined on the Policies Map will be safeguarded as a rail freight facility and interchange.

Rail Station at Saltford

617.

The opportunity for re-opening a station at Saltford has arisen from work undertaken by the West of England on the MetroWest Project. This will provide an additional train service between Bath and Bristol each hour (in both directions) and the potential for an additional station as well.

618.

A public consultation on the three potential options for the proposed station was completed in 2013 and the results considered by Cabinet in 2014 when it was agreed that, before deciding to progress to the next stage of Network Rail's Governance for Railway Investment Projects (GRIP) process, further work should be undertaken to see if there were a location for a station which would have additional parking and better access from the A4. In addition confirmation that the new rail timetable could accommodate the station at Saltford is still needed. No timescale has currently been set for the delivery of the project; however progress is dependent on the successful completion of Phase 1 of the MetroWest project which is due for completion in 2019.

619.

The next step will be to consider and identify a preferred option/site for the new station, which will require an estimated 200 parking spaces in order to be viable. However, it may need to be addressed as part of any future Local Plan review.

Traffic management proposals

620.

The Core Strategy highlights that 'improvements to parts of the District's historic settlements will become possible by reducing the volume of traffic using historic streets and spaces.' It supports the management of the highway network, particularly in local centres, residential areas, places of higher pedestrian footfall and/or areas of historic significance. This also helps with the creation of high quality public realm and better places, and is an approach reflected in the Council's Public Realm and Movement Strategy.

621.

The purpose of Policy ST5 is to provide specific guidance for traffic management proposals and sets the high level principles within which more tailored traffic management schemes may be devised.

POLICY ST5: Traffic Management Proposals

With reference to the principles in Policy ST3, traffic management proposals for the centres of Bath, Keynsham, Midsomer Norton, Radstock, Westfield and Peasedown St John will be expected to:

- 1 discourage through traffic and other unnecessary motorised vehicles from the main shopping streets;
- 2 enhance vitality and viability;
- 3 secure improvements for pedestrians, cyclists and the mobility impaired;
- 4 facilitate the improvement of public transport integration;
- 5 ensure the needs of all road users are taken into account and the servicing needs of commercial, cultural, recreational and residential activities are met;
- 6 improve air quality; and
- 7 be designed to respect local distinctiveness and not detract from the quality of the historic, environmental and cultural assets

Traffic Management schemes in residential areas should aim to reduce the speed of traffic and to discourage through traffic from using unsuitable routes.

Park & Ride

622.

The Council proposes to expand the provision of Park and Ride facilities to serve Bath. In addition to the proposed East of Bath Park and Ride site, initial investigations suggest that the existing Park and Ride sites at Newbridge, Odd Down and Lansdown are likely to need further expansion to ensure the transport network can accommodate the growth generated by the Enterprise Area, beyond the Park & Ride enhancements already implemented through the Bath Transport Package. The locations of these expansions are indicated on the Bath Spatial Strategy diagram.

623.

The Council has a long established policy to develop a new Park and Ride facility to the east of Bath to improve access from that side of the city, and to further reduce traffic into the centre. An independent review of potential Park and Ride sites was carried out in 2013.

624.

The Council has consulted with the public to help identify the most appropriate location (September/October 2015). No final decision has been made on which is the preferred site. The general area under consideration is indicated on the Bath Spatial Strategy diagram for reference.

625.

Policy ST6 will be used to assess Park and Ride schemes. It is proposed that the following criteria guide the development of the East of Bath Park and Ride site to ensure a consistency of approach. In the absence of any firm proposals and in the event that a Park and Ride scheme may come forward within the Plan period, all proposals should be thoroughly evaluated before approval to ensure that the most sustainable locations are selected, and that all relevant impacts are properly assessed. Any proposals for development within the Green Belt will have to comply with national Green Belt policy. The NPPF states that local transport infrastructure which can demonstrate a requirement for a Green Belt location is not inappropriate in Green Belt, provided it preserves the openness of the Green Belt and does not conflict with the purposes of including land in the Green Belt.

POLICY ST6: Park And Ride

1 Development of new or expansion of existing Park and Ride sites will be permitted provided:

a that there is no unacceptable impact on environmental assets and amenity including the World Heritage Site and its setting, the Cotswolds AONB and Natura 2000 sites (SACs/SPA); and

b that there is no unacceptable impact on surrounding road network and its capacity to safely accommodate potential traffic generation; and

c provision is made for the needs of those with impaired mobility and for the safety and security of all users; and

d in the case of Park and Ride development in the Green Belt, it can as necessary be demonstrated that there are not any more suitable or more sustainable alternative sites outside the Green Belt and does not conflict with the purposes of including land in it.

Applicants will also be required to demonstrate that the scheme complies with all other relevant national and local planning policies that affect the site and its location.

Development management, transport, access and parking

626.

Developers are required to submit sufficient information to enable the Council to assess these matters, and to demonstrate that any traffic reduction targets or initiatives aimed at promoting public transport, cycling and walking set out in the Local Transport Plan will not be jeopardised by their proposals.

627.

National planning policy requires that all developments that generate significant amounts of movement should be supported by a Transport Statement or Transport Assessment. Plans and decisions should take account of whether:

- the opportunities for sustainable transport modes have been taken up depending on the nature and location of the site, to reduce the need for major transport infrastructure;
- safe and suitable access to the site can be achieved for all people; and

- improvements can be undertaken within the transport network that cost effectively limit the significant impacts of the development. Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe.

628.

Developments should also make a positive contribution towards the achievement of the Council's traffic reduction targets. This can be achieved through, for example:

- development being located and designed in such a way that it seeks to discourage car use and encourages travel by other modes.
- occupier(s) of the development seeking to secure changes in the travel behaviour of employees, clients or other visitors by drawing up a workplace or school travel plan to be submitted to the Council for approval very often as a Planning Obligation. These Plans do not have to be associated with development and can be phased to take account of planned improvements in public transport for example.
- developers of smaller scale residential schemes providing 'Welcome Packs' to encourage occupants to travel sustainably

- development making a financial contribution towards the implementation of the Council's transport strategies. Such contributions will be tailored as far as possible according to the nature and location of the development.

629.

More detailed information on travel plans, transport assessments and statements in decision-taking can be found in the National Planning Policy Framework and Planning Practice Guidance.

630.

Policy ST7 sets out the policy framework for considering the requirements and implications of development for the highway, transport systems and their users. This will ensure that the direct and indirect impacts of schemes are properly assessed.

POLICY ST7

Transport Requirements For Managing Development

1 Development will be permitted providing the following provisions are met:

- a highway safety is not prejudiced;
- b safe and convenient access to and within the site for pedestrians, cyclists and those with a mobility impairment is provided or enhanced;
- c suitable vehicular access;
- d no introduction of traffic of excessive volume, size or weight onto an unsuitable road system or into an environmentally sensitive area;
- e no traffic mitigation measures are required that would harm the historic or natural environment;
- f provision made for any improvements to the transport system required to render the development proposal acceptable;
- g secure and accessible cycle storage facilities.

2 In the case of new development proposals, facilities for charging plug-in and other ultra-low emission vehicles will be sought where practicable.

3 Transport assessments/statements

Planning applications for developments that generate significant levels of movement should be accompanied by a transport assessment or transport statement in accordance with National Planning Policy Framework and Planning Practice Guidance. Schemes will be expected to be tested through the Council's transport modelling, as necessary.

4 Parking:

- a An appropriate level of on-site servicing and vehicle parking and cycle parking should be provided in accordance with the parking standards as set out in Schedule 2 – Parking Standards and in Schedule 1 – Parking for Disabled people.
- b There should be no increase in on-street parking in the vicinity of the site which would affect highway safety and/or residential amenity.

Parking Standards

631.

Bath and North East Somerset's previous Local Plan (2007) set out the maximum car parking standards required for new development proposals reflecting previous national planning policy set out in PPG13 (Transport). The policy of restricting the level of parking provision particularly in new residential developments, has promoted less reliance on the motor vehicle and a move to more sustainable and healthy methods of travel, particularly for shorter journeys.

632.

In January 2011, the Government announced the removal of national limits on residential parking. Local authorities are still able to set parking standards for their areas, but they should do so having regard to local circumstances and without trying to control car ownership. However the need to promote sustainable transport outcomes is not affected.

633.

The NPPF reflects this approach to parking by referring to both residential and non-residential development, leaving it to local authorities to decide whether there is a need for parking standards by advising:

If setting local parking standards for residential and non-residential development, local planning authorities should take into account:

- the accessibility of the development;
- the type, mix and use of development;
- the availability of and opportunities for public transport;
- local car ownership levels; and
- an overall need to reduce the use of high-emission vehicles.

634.

The Department for Communities and Local Government (DCLG) issued a statement on 26 March 2015 regarding the setting of local parking standards, to be read alongside the NPPF. This states that: "*Local planning authorities should only impose local parking standards for residential and non-residential development where there is clear and compelling justification that it is necessary to manage their local road network.*"

Parking Standards in Bath & North East Somerset

635. When devising parking standards for Bath & North East Somerset recognition has been paid to the fundamental difference between the provision of spaces in residential developments as origin parking and spaces in employment, retail and leisure developments as destination parking. The shift in residential standards acknowledges that where constrained approaches to origin parking have not been supported by effective controls, problems affecting the use and enjoyment of streets have often arisen.

Bath

636. There currently exists a clear and compelling justification for introducing a prescribed parking standard for Bath based upon:

- Poor air quality
- Existing congestion levels within the city, and
- Overspill parking from new developments on the outskirts of the city that require the authority to introduce controlled parking zones and more enforcement

637. This approach is also supported by the recently adopted Bath Transport Strategy which states that *“additional parking in the core of the city is not really an option because space is scarce and more traffic would be undesirable.”*

638. Two parking zones have been introduced for Bath: a City Centre Zone and a Bath Outer Zone covering the remainder of Bath. The boundaries of each of these zones can be seen in Diagrams 9 and 10 below, with the City Centre Zone following the line of the city centre defined in the Core Strategy.

Diagram 9 – Bath City Centre Zone

Diagram 10 – Bath Outer Zone

Bath City Centre Zone

Non Residential

639.

For B1 uses in the City Centre the parking standard is 1 space 400 sq metres. For all other non-residential development uses, the parking standard will be zero provision within the City Centre Zone exclusive of any operational requirements such as servicing/maintenance/loading, and accessible parking specifically for Blue Badge Holders, where some provision may be required. Any departure or reduction in parking standards from the prescribed standards will need to be fully justified by an accessibility assessment and car parking management strategy. The accessibility assessment is discussed in more detail below.

Residential

640.

For all residential development of any size in the City Centre Zone the parking standard is 0.5 spaces per dwelling. This standard is based on Census 2011 data that shows car ownership levels for those living in central Bath to be 0.5 cars per dwelling.

641.

This approach for parking in the City Centre Zone is justified as any development located in this zone is within a reasonable walking distance of key services and facilities, and is in the most accessible location within the Council area. The development will therefore benefit from a range of travel options.

642.

Such an approach is consistent with current transport and planning policy which seeks to direct development to the most sustainable locations, reduce the intrusion of vehicles in the historic core of Bath and protect the World Heritage Site.

642A

Any departure or reduction in parking spaces from the prescribed standards will need to be fully justified by an accessibility assessment and car parking management strategy. The accessibility assessment is discussed in more detail in a later section. Any car parking management strategy will need to include reference to off-site impacts, and existing/proposed residents' parking zones. All significant residential developments that consist of 10 or more dwellings in the City Centre Zone will require a parking assessment

Bath Outer Zone

Non Residential

643.

The non-residential parking standards for the Bath Outer Zone are defined as maximum standards. These are set out in Schedule 2 – Parking Standards at the end of this chapter.

644.

It is widely acknowledged that restricting parking at the origin of a journey is less effective than restricting parking at the destination. Therefore an important contribution to reducing traffic growth and congestion can be made by local authorities using their development control powers to limit the amount of parking associated with new business premises.

645.

The standards strike a balance between allowing proportionate and complementary parking provision in new developments, whilst at the same time not discouraging businesses from locating or expanding in Bath, or potentially transferring unmet parking demand onto residential streets. Any departure or reduction in parking spaces from the prescribed standards will need to be fully justified by an accessibility assessment and car parking management strategy. The accessibility assessment is discussed in more detail in a later section.

Residential

646.

Inside the Bath Outer Zone minimum parking standards apply for residential parking. These are set out in Schedule 2 – Parking Standards at the end of this chapter.

647.

Previous parking policy to reduce car travel through reducing availability of parking at both the origin and destination has not worked at the point of origin; therefore vehicle parking standards need to be increased, along with sustainable transport measures. By changing the origin car parking standard from a maximum to a minimum it is intended that appropriate parking facilities will be provided thereby minimising problems associated with on-street parking.

648.

Any departure or reduction in parking spaces from the prescribed standards will need to be fully justified by an accessibility assessment and car parking management strategy. The accessibility assessment is discussed in more detail in a later section. Any car parking management strategy will need to include reference to off-site impacts, and existing/proposed residents' parking zones. All significant residential developments that consist of 10 or more dwellings in the City Centre Zone will require a parking assessment.

Bath and North East Somerset Outside of Bath

Non-residential

649.

For non-residential developments outside the City of Bath, parking requirements will be determined on an individual basis (i.e. case by case).

650.

This approach reflects the position that the Council is best placed to take account of local circumstances, and is able to make the right decisions for the benefit of its communities, as opposed to these being dictated through national guidance and policy.

Residential

651.

Similar to the approach for the Bath Outer Zone, minimum parking standards will be applied to residential development outside the City of Bath. These are set out in Schedule 1 – Parking Standards at the end of this chapter.

652.

This approach for residential development, based on minimum parking standards allows more flexibility as the Council will still be able to negotiate higher levels if deemed necessary. This is in contrast to the existing maximum parking standards in the current Local Plan that do not allow for any flexibility upwards in parking provision.

653.

Any departure or reduction in parking spaces from the prescribed standards will need to be fully justified by an accessibility assessment and car parking management strategy (see below). Any car parking management strategy should include reference to off-site impacts, and existing/proposed residents' parking zones.

654.

The approach of restricting parking provision has had some success in city centres where public transport provision is good, the distance to important community services is short, and plenty of local shopping is available. In inter-urban and rural communities where mobility is more reliant on access to a car, many residential developments have been suffering from strict limitations of parking allocation. This inevitably results in parking problems which manifest themselves in pavement parking, obstruction of driveways and accesses, hindrance to larger delivery vehicles and refuse vehicles, damage to soft landscaping and footways, and cluttered, unsightly streets.

Accessibility Assessment

655.

The prescribed parking standards need to be considered in a sensitive and flexible way that reflects local circumstances. An accessibility assessment will be developed to assess the acceptability of potential departures from the prescribed residential and non-residential parking standards as set out in Schedule 2. This will help inform the implementation of Policy ST7.

656.

The use of accessibility levels as a basis for the departure from specific parking standards is now an established policy among many local authorities. The council has identified a process, following best practice, to apply such an approach.

657.

The assessment will require developers to undertake a questionnaire that will assess the actual site in terms of local accessibility to non-car modes of transport. The questionnaire will result in a development being scored on the basis of the current level of accessibility it has to non-car modes of transport. The score will enable the site to be assessed as having low, moderate, high or very high local accessibility. This score will then be translated into a discount from the prescribed parking standard.

Cycle Parking

658. Cycling is a key form of low carbon transport and is also part of a healthy lifestyle. The Council's policies and programmes facilitate the construction of cycle routes and cycling infrastructure throughout the area. However for cycling rates to increase, it is equally important that homes and workplaces have provision for people to easily and safely keep and store bicycles.

659. Cycle parking should be incorporated into the design of all developments (new, extensions or change of use). The numbers of stands required are expressed as minimum standards to reflect the sustainable nature of this mode of travel. These are set out in Schedule 2 – Parking Standards at the end of this chapter.

Residential Cycle Provision

660. In residential developments, where no provision is specified, garages or car ports should be large enough to accommodate bicycles. The dimensions and location of doors should be such that bicycles can be easily and conveniently taken in and out without removing the car and bins, if these are also stored in the parking area.

661. Where no suitably sized garage is available cycle parking should be provided in secure covered areas.

662. Shared cycle parking facilities should be located and designed to avoid anti-social behaviour and be covered, well lit, safe and convenient. Formal cycle parking for flats should ideally be provided within the building, either in a ground floor communal area close to the main entrance, under stairs or in underground or semi-basement areas alongside other storage for households, whilst maintaining fire escape routes.

663. Further information on the provision of secure cycle storage in domestic and non-domestic developments can be found in Secured by Design's publication 'New Homes 2014' (see clause 35) <http://www.securedbydesign.com/wp-content/uploads/2014/02/SBD-NewHomes14-lowres.pdf>.

All Uses Cycle Provision

664. Visitor cycle parking should be provided in well-overlooked areas, convenient for access to the building. Sheffield stands or similar should be used rather than less secure front wheel holders which also have greater potential to damage bicycles. Cycle stands need to be conveniently located close to destination points, but clear of the direct pedestrian desire lines. They should be detectable by blind or partially sighted people. A ground level tapping rail at either end of a run of stands should be provided.

665. Standards for cycle parking are described either as "stands" or as "spaces". Note that one stand means a Sheffield Type Stand, which equates to two spaces. In some cases higher quality provision will be appropriate in the form of spaces (e.g. under cover or with secure lockers). Generally, the longer cycles are expected to be parked at a location, the higher the level of weather protection and security required. This will be a matter for consideration on individual planning applications.

666. In addition to the provision of secure parking for visitors, as part of any agreement on Travel Plans, developers of non-residential proposals will be required to demonstrate that the Travel Plan has considered the additional needs of employees, such as lockers, changing and shower facilities.

Provision for people with disabilities

667. Many disabled people rely on cars for getting about. Whether they drive themselves or ride with someone else, the ease with which they can reach their destination is almost always determined by where the car can be parked. Parking standards for people with disabilities is provided in Schedule 1 below. These standards conform with guidance provided in the Department for Transport's Traffic Advisory Leaflet 05/95 'Parking for Disabled people'.

Schedule 1 – Parking for Disabled people

Description of Use	Parking Provision minimum standards	Notes
Employment	<p>Up to 200 spaces: Individual bays for each disabled employee plus 2 spaces or 5% of total capacity whichever is greater.</p> <p>Above 200 spaces: 2% of capacity plus 6 spaces</p>	<p>Car parking spaces should be clearly identified for blue badge holders only and should be located so as to allow easy access to the building they serve.</p> <p>A minimum of 1 space should be provided where calculations produce a figure of less than one whole space.</p> <p>Where development is to take place without on-site parking the availability of parking for disabled people in public/shared car parking needs to be reassessed and additional provision funded by the development if appropriate.</p> <p>The availability of on-street parking for disabled people may also be taken into consideration.</p>
Shopping, leisure, recreation and other uses requiring public access	<p>Up to 200 spaces: 6% of capacity or 3 spaces, whichever is greater.</p> <p>Above 200 spaces: 4% of capacity plus 4 spaces</p>	

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
A1 Retail	Bath City Centre Zone	Zero provision		1 stand per 200sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Up to: 100sqm: 2 spaces 200sqm: 3 spaces 300sqm: 4 spaces 500sqm: 5 spaces Over 500sqm: 1 space per 20sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
A1 Food Retail	Bath City Centre Zone	Zero Provision			
	Bath Outer Zone	1 sps per 14sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
A2 Financial and Professional Services	Bath City Centre Zone	Zero provision		1 stand per 300sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Up to: 100sqm: 2 spaces 200sqm: 3 spaces 300sqm: 4 spaces 500sqm: 5 spaces Over 500sqm: 1 space per 20sqm	-		

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
A3 Restaurant and cafes	Bath City Centre Zone	Zero provision		1 stand per 100sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Up to: 100sqm: 2 spaces 200sqm: 3 spaces 300sqm: 4 spaces 500sqm: 5 spaces Over 500sqm: 1 space per 20sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
B1 Offices, Light Industrial, R&D, Laboratory Studios	Bath City Centre Zone	1 space per 400sqm	-	1 stand per 100sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	1 space per 100sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
B2 Industry	Bath City Centre Zone	Zero provision		1 stand per 300sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	1 space per 50sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
B8 Warehousing	Bath City Centre Zone	Zero provision		1 stand per 400sqm	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Up to 235sqm: 1 space per 50sqm Above 235sqm: 1 space per 250sqm	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
C1 Hotels	Bath City Centre Zone	Zero provision		1 stand per 5 staff plus 1 space per 20 bedrooms	Arrangements can be made with public/private car park operators. Coach parking on merit.
	Bath Outer Zone	1 space per 3 bedrooms	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
C2 Hospitals	Bath City Centre Zone	Zero provision		1 stand per 4 staff + 1 space per 10 beds	When allocating parking spaces preference should be given to the needs of patients and the operational needs of staff. Each case assessed on merit. New/expanded health facilities will be required to improve access by public transport, walking and cycling and provision of Travel Plans will be sought. Adequate disabled parking provision and dropping off facilities must be provided.
	Bath Outer Zone	Hospitals 1 space per 4 staff plus 1 space per 3 visitors	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
C2 Residential/ Boarding Schools	Bath City Centre Zone	Zero provision		1 stand per 5 staff + 1 space per 3 Students	<p>Duty staff are those required to be present “on duty” over-night.</p> <p>Operational requirements will be considered in addition. Adequate disabled parking provision and dropping off facilities must be provided.</p> <p>Standard permit allowance for visitors. Dropping off area and temporary parking area for open days to be defined.</p>
	Bath Outer Zone	1 space per 2 members of staff which shall include sufficient space for each member of duty staff	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
C2 Residential Colleges, student accommodation	Bath City Centre Zone	Zero provision		1 stand per 5 staff + 1 space per 3 students	<p>Educational establishments are expected to discourage use of cars by students and staff.</p> <p>New/expanded facilities will be required to improve access by public transport, walking and cycling. Provision of Travel Plans will be sought.</p>
	Bath City Centre Zone	Zero provision			
	Bath Outer Zone	Zero provision			
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
C2 Convalescent, Residential Care and Nursing Homes	Bath City Centre Zone	Zero provision		1 stand per 4 staff + 1 space per 10 beds	
	Bath Outer Zone	1 space per 2 staff plus 1 space per 6 bed spaces	-		
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
C3 Residential	Bath City Centre Zone	0.5 space per dwelling	-	2 secure covered spaces per dwelling.	<p>Vehicle Parking Garages are included within the prescribed minimum standard provided they have minimum internal dimensions of 6m by 3m.</p> <p>For Bath City Centre the prescribed standard is exclusive of any operational requirements, such as service/maintenance and possible provision of accessible parking specifically for Blue Badge Holders. This will be assessed on merit.</p> <p>Cycle parking Satisfied if garage or secure area is provided within curtilage of dwelling to minimum dimensions</p> <p>If no garage or secure area provided 1 secure covered stand per dwelling in a communal area for residents plus 1 stand per 8 dwellings for visitors</p>
	Bath Outer Zone	-	<p>1 space per one bed dwelling.</p> <p>2 spaces per two to three bed dwelling.</p> <p>3 spaces per four bed dwelling and above.</p> <p>0.2 space per dwelling for visitor parking</p>		
	Bath and North East Somerset Outside of Bath	-	<p>1 space per dwelling.</p> <p>2 spaces per two to three bed dwelling.</p> <p>3 spaces per four bed dwelling and above.</p> <p>0.2 space per dwelling for visitor parking</p>		

Schedule 2 – Parking Standards

Land Use	Location	Vehicle Parking		Cycle Parking	Notes
		Maximum Standard (gross)	Minimum Standard (gross)	Minimum Standard (gross)	
D1 Non-Residential Institutions	Bath City Centre Zone	Zero provision		1 stand per 4 staff	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Each case assessed on merit			
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			
D2 Assembly and leisure uses	Bath City Centre Zone	Zero provision		10 stand plus 1 space per 10 vehicle space	Transport assessments may be appropriate for some developments
	Bath Outer Zone	Each case assessed on merit			
	Bath and North East Somerset Outside of Bath	Each case assessed on merit			

Airport and Aerodrome Safeguarding Areas

668. Circular 1/2003 'Safeguarding, Aerodromes, Technical Sites and Explosive Storage Areas' requires that Local Plans should include a policy stating that officially safeguarded areas have been established for a particular airport. It also states that the outer boundary of safeguarded areas should be indicated on the Policies Map and made clear that why an area has been safeguarded and that it is neither the responsibility nor the proposal of the local planning authority.

669. Bristol International Airport at Lulsgate lies close to the western boundary of the District and is listed as an officially safeguarded civil aerodrome. Parts of the District are covered by the Safeguarding Areas for this airport, Clutton Hill Airfield and Colerne, a military aerodrome in North Wiltshire. Air installations that are protected in this way are selected on the basis of their importance to the national air transport system or national defence.

670. Under the terms of the Circular certain planning applications will be the subject of consultation with the aerodrome operator. For instance land uses or tall structures that would prejudice air safety or the ability of the installation to maintain either existing or acceptable increased level of activity will not be permitted within these areas. This includes uses which might increase the risk of collision between aircraft and birds. Certain applications for development will be the subject of consultation with the operator of the aerodrome in accordance with Circular 1/2003 'Safeguarding, Aerodromes, Technical Sites and Explosive Storage Areas'.

671. Policy ST8 will not allow development that would prejudice air safety or the optimum use of the facility within the airport/aerodrome safeguarding areas as defined by the Civil Aviation Authority (CAA).

POLICY ST8: Airport And Aerodrome Safeguarding Areas

Within the airport/aerodrome safeguarding areas as defined by the Civil Aviation Authority and as shown on the Policies Map any development that would prejudice air safety or adversely affect the operational integrity of an aerodrome or airport.

Delivery

The delivery of transport and movement initiatives will be achieved through a wide range of channels. Many of those that require significant levels of capital funding though central government are being reviewed via the Comprehensive Spending Review 2010 and are likely to be delivered at a later date than anticipated. Transport Assessments will be a requirement for major planning applications.

Other transportation improvements could be delivered through other initiatives coming from different disciplines, for example to fulfil the aspirations of the health agenda, or through carbon reduction programmes. Key areas of delivery will be as follows:

- Joint Local Transport Plan 3 (including transport proposals for Bath & the Greater Bristol Metro-Major Scheme)
- Bath's Public Realm and Movement Programme
- The development and implementation of new Parking Strategies for urban centres

- Smarter Choices Initiatives
- European CIVITAS projects
- Other Capital projects
- Community Infrastructure Levy
- S106 contributions
- Planning Obligations SPD
- Major development projects
- Community led initiatives
- Initiatives by the health sector
- Climate Change awareness raising
- enhancement of local centres and other facilities within close walking or cycling distance from where people live

MINERALS

672.

The NPPF places importance on facilitating the sustainable use of minerals and asks local authorities to include policies relating to the extraction, prior extraction of minerals and for reclamation and restoration and to set out environmental criteria, and to define Minerals Safeguarding Areas.

Policy aims

- ensure the most efficient use of minerals is made as a finite natural resource
- requirement to define minerals safeguarding areas to ensure minerals which have the potential for further exploitation are not needlessly sterilised by non-mineral development
- encourage the prior extraction of minerals where it is practicable and viable environmentally
- detrimental impact on the natural, historic and on health from permitted operations should be avoided

673.

Minerals are a finite and important resource both nationally and locally. Unlike most other forms of development mineral extraction can take place only where the mineral is found. Therefore it is important to protect areas where it is known, or suspected, that commercially valuable minerals exist.

674.

Limestone is the principal commercial mineral worked in the District. There are currently two active sites – one surface workings and one underground mine. Upper Lawn Quarry at Combe Down in Bath and Hayes Wood mine near Limpley Stoke both produce high quality Bath Stone building and renovation projects. Bath & North East Somerset also has a legacy of coal mining and there are still coal resources which are capable of extraction by surface mining techniques. Although no longer worked, there are potential public safety and land stability issues associated with these areas. The general extent of the surface coal Mineral Safeguarding Area within the District is illustrated in Diagram 20a.

675.

Historically Bath & North East Somerset has never made any significant contribution to regional aggregates supply and because of the scale and nature of the mineral operations in the District and the geology of the area it is considered that this situation will continue. Bristol is also in no position to make a contribution to regional aggregates supply, other than the provision of wharf facilities. However North Somerset and South Gloucestershire have extensive permitted reserves of aggregates and have historically always met the sub regional apportionment for the West of England. This approach is consistent with national planning policy advice for minerals.

676.

The West of England Joint Waste Core Strategy (JWCS) seeks to encourage the prudent use of resources with specific reference to minerals and includes policy guidance on the recycling, storage and transfer of construction, demolition and excavation waste at mineral sites.

677.

Policy CP8a, which sets out the strategic approach to minerals in the District, will ensure that mineral resources within the District continue to be safeguarded. Minerals Safeguarding Areas will be designated in a separate Development Plan document following the methodology set out in the British Geological Survey¹ document and defined on the Policies Map. Although there is no presumption that the resources

will be worked this will ensure that known mineral resources are not needlessly sterilised by non-mineral development.

It is proposed that more detailed guidance on minerals related issues will be developed in the relevant Development Plan Document as will issues of land instability, which it is recognised is wider than just minerals, and restoration proposals to accord with national minerals planning policy advice. This will take place alongside the review of existing minerals allocations and designations.

1 BGS/Coal Authority Guide to Minerals Safeguarding in England 2011

POLICY CP8a

Minerals

Mineral sites and allocated resources within Bath & North East Somerset will be safeguarded to ensure that existing and future needs for building stone can be met.

The production of recycled and secondary aggregates will be supported by safeguarding existing sites and identifying new sites.

Minerals Safeguarding Areas will be designated to ensure that minerals resources which have a potential for future exploitation are safeguarded and not needlessly sterilised by non-mineral developments. Where it is necessary for non-mineral development to take place within a Minerals Safeguarding Area the prior extraction of minerals will be supported.

Potential ground instability issues, including those associated with the historical mining legacy, and the need for related remedial measures should be addressed as part of the proposal in the interests of public safety.

Mineral extraction that has an unacceptable impact on the environment, climate change, local communities, transport routes or the integrity of European wildlife sites which cannot be mitigated will not be permitted. The scale of operations should be appropriate to the character of the area and the roads that serve it.

Reclamation and restoration of a high quality should be carried out as soon as reasonably possible and proposals will be expected to improve the local environment.

Delivery:

Delivery will be through the Development Management process. Minerals Safeguarding Areas will be identified in a separate Development Plan Document and other current designations and allocations will be reviewed to ensure adequate resources are safeguarded.

Mineral Safeguarding Areas

678.

Mineral Safeguarding Areas are defined around the active mineral sites in the Plan area. The purpose of these areas is to avoid the needless sterilisation of mineral resources by non-mineral development. There is no presumption that any of these areas will be acceptable for mineral working and nor should they be used to automatically preclude other forms of development. Instead they are to make sure that mineral resources are adequately and effectively considered in land use planning decisions.

679.

Limestone is the only mineral that is now worked in the Plan area and the existing safeguarding areas, whilst not covering the whole of the geological resource in the Plan area, are based on the active workings in the area. It is considered that these areas adequately identify the mineral resource areas likely to be of interest in the future.

680.

With the District's significant historic coal mining legacy there are still coal resources which are capable of extraction by surface mining techniques. Although no longer worked, there may be potential public safety and land stability issues associated with these areas (see also the Unstable Land section in the Environmental Quality chapter). To ensure that coal resources are not unnecessarily sterilised by new development, the prior extraction of the coal may be sought. This would have the added benefit of removing any potential land instability problems in the process.

681.

Any proposal for coal extraction will be determined in accordance with national policy. As statutory consultee the Coal Authority may recommend that shallow coal resources are removed as part of the ground works of the proposed development. The 'Development High Risk Area' for the coal mining legacy is defined on the Policies Map within which the submission of a Coal Mining Risk Assessment would be necessary to support a development proposal (see also Policy PCS6 'Unstable Land').

682.

The general extent of the surface coal Mineral Safeguarding Area within the District shown on the Policies Map together with other Mineral Safeguarding Areas as described above. Policy M1 clarifies how applications for non-mineral development within Mineral Safeguarding Areas will be considered.

POLICY M1: Mineral Safeguarding Areas

Non mineral development within Mineral Safeguarding Areas as shown on the Policies Map will be permitted provided:

- 1 It will not sterilise or unduly restrict the extraction of mineral deposits which are, or may become, of economic importance and which are capable of being worked; and
- 2 It will not adversely affect the viability of exploiting a mineral resource or be incompatible with an existing or potential minerals development; or
- 3 It is practicable and environmentally acceptable to extract the mineral before development commences and this is secured as part of the development.

Minerals Allocations

683. Active mineral working continues at both Upper Lawn Quarry and Hayes Wood Mine (also known as Stoke Hill Mine). However Stowey Quarry, previously identified for future extraction, has now been worked to its maximum extent and the current planning permission for mineral extraction has expired. Recent planning permissions and applications have focussed on utilising Stowey Quarry for waste management purposes. Nevertheless the Mineral Safeguarding Area for Stowey Quarry will be retained in order to safeguard any future interest.

684. As an underground working Stoke Hill Mine has very limited surface impacts which are restricted to its surface stockyard and adequately controlled by the conditions on the current permission. Therefore whilst it is located within the Green Belt and the Cotswolds AONB its impact on these designations is very limited. The current Area of Search² at the mine occupies an extensive area that coincides with the Mineral Safeguarding Area. There remains therefore a substantial area identified for potential future working and this is considered likely to be adequate for the future Plan period and should therefore be retained.

685. Upper Lawn Quarry is tightly constrained by housing, allotments and recreational land but it remains an importance source of Bath stone used in new build and restoration projects in the City. The operation is well established, small scale and low key and operates without complaint. A Preferred Area³ for future mineral extraction remains unpermitted to the north of the existing quarry and it is considered likely on current levels of activity that this will be sufficient for the forthcoming Plan period.

686. Policy M2 sets out the approach in respect of the extraction of primary aggregates and including those sites allocated for mineral extraction as shown on the Policies Map as well as their respective areas of search.

2 Area of Search: area where knowledge of mineral resources may be less certain but within which planning permission may be granted, particularly if there is a potential shortfall in supply (PPG).

3 Preferred Area: area of known mineral resources where planning permission might reasonably be anticipated. Such areas may also include essential operations associated with mineral extraction (PPG).

POLICY M2: Minerals Allocations

The following sites, as shown on the Policies Map, are allocated for mineral extraction:

- 1 Upper Lawn Quarry, Bath and preferred area; and
- 2 Stoke Hill Mine, Limpley Stoke and area of search.

Mineral extraction outside of these areas will not be permitted unless it can be demonstrated that the need for the mineral cannot be met from the allocated sites or from adjoining authority areas.

Proposals for mineral extraction involving the production of crushed rock or other aggregate minerals as a primary activity will not be permitted.

Aggregate Recycling Facilities

686.

Existing or approved aggregate recycling facilities in the Plan area are located at the former Fullers Earthworks site, Odd Down and Stowey Quarry. The Odd Down site operates under the benefit of established B2 use rights and has been subject to enforcement action to determine the extent of those rights. Planning permission for a residual waste facility including material recovery facilities was approved in 2015. The permission at Stowey Quarry permits aggregate recycling at the site until 2028. The existing facilities and permissions are considered to provide an adequate geographical spread across the Plan area and there is not currently a demand for additional facilities.

687.

Having regard to the often temporary nature of these facilities it is considered preferable for any future proposals that may come forward to be dealt with by a criterion based policy as set out below rather than by allocating specific sites/areas. Policy M3 clarifies the policy approach to considering proposals for aggregate recycling facilities.

POLICY M3 Aggregate Recycling Facilities

The development of aggregate recycling facilities will only be permitted at the following locations:

- 1 Active mineral or waste management sites where the development will not conflict with or unreasonably delay the restoration of the site; or
- 2 Land used for general industrial (B2 use); or
- 3 Previously developed land not already allocated for alternative uses.

Winning and working of minerals

688.

There is historically a low level of mineral activity within Bath and North East Somerset and this situation is unlikely to significantly change during the Plan period. A policy framework is therefore in place against which all minerals developments will be determined and to ensure full consideration is given to minerals related planning applications.

POLICY M4 Winning and working of minerals

Within the context of Policy CP8a the winning and working of minerals and ancillary minerals development will be permitted where:

- 1 The need for the mineral is demonstrated having had regard to the availability of alternative sources of primary, secondary and recycled materials
- 2 The scale and nature of the proposed development is compatible with the character of the area
- 3 Adequate safeguards can be secured for the protection of the environment and the amenities of the area
- 4 Satisfactory provision is made for the restoration of the site which maintains or enhances its value to the environment and/or community and
- 5 The access roads are adequate for the type and volume of traffic or can be upgraded without comprising the character or adversely affecting the environment in the vicinity of the road.

Energy Minerals

Background

689.

Shale gas and coal bed methane (CBM) extraction is a new mineral related issue for the District since the adoption of the previous Local Plan in 2007. Bath and North East Somerset potentially has oil and gas reserves; for example within coal beds or possibly within its deeper shale resource.

690.

The particular concern for Bath & North East Somerset is the potential involvement of the deep drilling and fracturing or 'fracking' of the deep geological resource in order to extract shale gas. This has implications for the Bath Hot Springs which relies on underground water resources from a wide geographical area and the potential disruption that deep drilling and hydrofracturing (fracking) may cause. Due to the international importance of the Bath Hot Springs a precautionary approach should be applied to proposals for shale gas exploration and extraction within the Plan area.

691.

Shale gas is methane found in rocks deep below the earth's surface which had previously been considered too impermeable ('tight') to allow for economic recovery. The method of extraction involves hydraulic fracturing or 'fracking'. This process involves opening and/or extending existing narrow fractures or creating new ones (typically hairline in width) by pumping a mixture of water, sand and additives at a very high pressure down a borehole to induce fractures in the shale rock bed allowing gas (or oil) to be captured.

692.

Coal bed methane, on the other hand, is methane that is extracted from unworked coal seams. The extraction of coal bed methane is usually from one of two sources most commonly directional drilling along a coal seam or drilling vertically into a coal seam (making use of pre-existing fracture patterns). The water in the coal seam is pumped out to the surface with the methane following. Coal bed methane doesn't usually involve fracking as the coal seams are less dense than the shale rock. However, fracking would be required if the gas could not be extracted solely by pumping. To date in the UK there has been no commercial exploitation of coal bed methane.

Petroleum Exploration and Development Licences (PEDL)

693.

The Department of Energy and Climate Change (DECC) is responsible for issuing Petroleum Exploration and Development Licences (PEDLs) which give exclusive rights for exploration and extraction of oil and gas resources within a defined area. Gaining a licence does not convey consent to drill or undertake any other form of operations.

694.

PEDL Licences for exploration were previously granted within the Plan area and in neighbouring authorities under the 13th round of DECC's licensing. There has been interest in developing exploration boreholes within the Plan area, notably in the Hicks Gate area of Keynsham in 2012 (the planning application was subsequently withdrawn). All 13th round licences potentially affecting B&NES have now been rescinded.

695.

The Government has announced (August 2015) the issuing of a number of the 14th round Petroleum Exploration and Development (PEDL) licences. None of these affect Bath & North East Somerset but there a number of further areas in Wiltshire and Somerset for which licences have been applied for but are now subject to further consultation under a Habitats Regulations Assessment. DECC regularly updates the PEDL map so what is shown on the Policies Map reflects the position at the time of the Plan's adoption to comply with national policy.

Policy context

696.

Whilst there are currently no PEDL licences within Bath & North East Somerset or in the wider region it is nonetheless important to have in place a robust planning policy framework in place for considering planning applications relating to energy minerals related development within Bath & North East Somerset should this situation change in the future.

697.

The NPPF provides the context for developing local planning policy for energy minerals. A detailed policy planning framework for determining planning applications relating to the extraction of energy minerals is expected, to include:

- Criteria-based policies for each of the three phases of hydrocarbon extraction – Exploration, Appraisal and Production – which set clear guidance and criteria for the location and assessment of hydrocarbon extraction within the Petroleum License Areas
- Petroleum License (PEDL) Areas on the Policies Map

698.

Proposals would need to be considered within current national, European and international legislation, in light of the latest scientific information, government advice and best practice guidance at the time of proposal application. Planning Practice Guidance (March 2014) provides current advice on planning for mineral extraction in plan making and the application process. There is a dedicated section on Planning for Hydrocarbon extraction which provides a wealth of detailed information and advice.

699.

A Topic Paper on energy minerals has been prepared jointly by Somerset County, Bath & North East Somerset, North Somerset and Mendip District Councils and the Environment Agency. This is a technical paper which includes an outline of the key regulatory responsibilities in respect of the Planning Authority (MPA), Department for Energy and Climate Change (DECC) Environment Agency (EA) Health and Safety Executive (HSE) which must be satisfied before any proposal can be implemented.

700.

The Government has updated this guidance making explicit that permission should only be granted for extraction of unconventional hydrocarbons in AONBs in exceptional circumstances and where this would lead to substantial harm to or loss of a World Heritage Site, mineral planning authorities should refuse consent unless wholly exceptional circumstances apply.

701.

Obtaining planning consent is just one of a number of consents that must be obtained before fracking can take place. In addition to the Minerals Planning Authority, the key regulators are the DECC, Environment Agency and the Health and Safety Executive (HSE). Other bodies which may be involved in the consenting of the process include the Coal Authority, Natural England, British Geological Survey (BGS), and the Hazardous Substances Authorities.

702.

Although it is acknowledged it may not always be possible to distinguish a distinct appraisal phase, new planning applications will be expected for three main phases for on-shore oil and gas development (exploration, appraisal and production) to ensure that potential impacts are managed and minimised. An Environmental Impact Assessment will be required where a project involving hydraulic fracturing is likely to have significant environmental effect. This is most likely to apply to the exploratory and appraisal phases. An Environmental Risk Assessment (ERA) should also be completed as best practice in line with DECC guidance.

703.

For the production stage operators will be expected to provide information on the outcomes of the appraisal stage with evidence that production will be viable. This should be accompanied by a development framework for the site with detailed consideration of the economic impacts of the proposal.

704.

Proposals would need to satisfy the requirements of Policy M5. Other key policy areas (e.g. policies for Green Belt, AONB, World heritage Site, Water Source Protection Zones, Bath Hot Springs) may also be relevant to the consideration of proposals. The consideration of cumulative impacts will form an important part of decision making process. Appropriate planning obligations and conditions will be sought to ensure the necessary safeguards or mitigation are put in place.

705.

Bath & North East Somerset Council will continue to collaborate with Somerset Council, North Somerset Council, Mendip District Council, the Environment Agency and other relevant organisations such as DECC, the Coal Authority and the British Geological Survey (BGS) to ensure the Council's evidence base and knowledge to kept up to date on potential impacts in this rapidly evolving field.

POLICY M5 Energy Minerals

1 Development involving the exploration and/or appraisal of oil and gas resources in Bath and North East Somerset will only be permitted provided it can be demonstrated that:

a well sites and associated facilities would be sited in the least sensitive location from which the target reservoir can be accessed; and

b drilling at the proposed location will not generate unacceptable adverse impacts on the integrity of the underlying geological structure or groundwater resource(s); and

c the proposal does not give rise to any potential adverse impacts on amenity, human health, public safety and the natural and historic environment which cannot be successfully mitigated; and

d possible effects that might arise from the development would not adversely affect the integrity of a European site or species.

2 In the case of proposals for the production of oil or gas development permission will only be granted provide it can be demonstrated to the satisfaction of the Council that, in addition to the above requirements:

a a full appraisal of the oil and /or gas resource has been undertaken that confirms production will be viable; and

b a development framework for the site, incorporating or supplemented by justification for the number and extent of the proposed production facilities and assessment of the economic impacts.

3 Development that is likely to have any adverse impact on the quality or yield of the Bath Hot Springs will not be permitted.

4 Permission will only be granted for extraction in the AONBs in exceptional circumstances and substantial harm to a World Heritage Site will be wholly exceptional.

5 The decommissioning, restoration and aftercare of a site will be required to be carried out to a high standard in the shortest possible time, at the earliest possible opportunity, to a timescale to be agreed with the Council.

6 In all cases, where investigations identify a need for safeguards or mitigation, appropriate conditions may be imposed, or agreements sought.

The following studies, together with documents produced by the Government on unconventional hydrocarbons provide further background information on unconventional oil and gas:

- BGS report 'Potential problems in Bath & North East Somerset and surrounding area with respect to hydrocarbon and other exploration and production' October 2012:

- Energy Minerals Topic Paper (2014) prepared jointly by Somerset County, Bath & North East Somerset, North Somerset and Mendip District Councils and the Environment Agency

INFRASTRUCTURE

706.

The Core Strategy ~~must be~~ is supported by evidence of what physical, social and green infrastructure is needed to support the developments proposed in the spatial strategy. This evidence ~~will~~ includes the costs of infrastructure, who will be responsible for providing it and when it will be provided. It will be funded in various ways. Some funding will be provided by the Council, some through national funding streams, and some from developer contributions or through the investment programmes of other service providers.

707.

The Council has prepared an Infrastructure Delivery Programme (IDP) which ~~will~~ presents this evidence and ~~will~~ seeks to ~~make~~ ensure that the planned infrastructure can meet the needs of new development and also close the gaps in existing infrastructure. The IDP includes a high level assessment undertaken by West of England partners as well as some more specific work carried out within the District. The programme covers issues such as the viability of a development, funding and its timing. It ~~will~~ also outlines how and when key infrastructure will be provided. It ~~will~~ looks at the need for: transport, open and green space, energy provision and secondary education as well as flooding, water supply, sewerage and drainage and healthcare provision.

708.

The Council will also work with partners and in partnership with local communities to ensure that adequate and accessible provision is made for the health, welfare, faith, recreational, leisure and cultural needs of existing and future communities and neighbourhoods in B&NES. Successful community facilities and services will be integral to the vibrancy of communities across the District. Good community facilities provide opportunities for interaction between people, to get involved in activities and to have increased accessibility to basic services. This benefits the social prosperity of communities across the District, whilst providing knock on benefits for sustainability and the economy.

709.

Details of the infrastructure needed for new developments and to reduce gaps in existing infrastructure have been highlighted in the relevant sections of the Core Strategy (see strategic requirements identified in the District-wide chapter, and the place-based chapters for more detailed place specific requirements).

710.

Policy CP13 will ensure that all new developments are supported by the necessary infrastructure, including forms of energy supply that help to reduce carbon emissions and existing infrastructure is retained and improved. Proposals for housing developments should consider the potential for cumulative effects on social infrastructure. Key Infrastructure requirements set out in the Core Strategy will be supported by an up-to-date IDP with a robust monitoring system to track each element of the delivery.

POLICY CP13 Infrastructure Provision

New developments must be supported by the timely delivery of the required infrastructure to provide balanced and more self-contained communities.

The Council will work in partnership with adjoining authorities, local communities and relevant agencies and providers to ensure that social, physical and green infrastructure is retained and improved for communities.

Developer contributions will be based on the Planning Obligations SPD and its successors.

Infrastructure proposals should not cause harm to the integrity of European wildlife sites which cannot be mitigated.

Delivery:

The Core Strategy will be supported by an Infrastructure Delivery Programme which will set out Infrastructure requirements and estimated costs, and suggested delivery mechanisms and phasing schedules for infrastructure delivery. Delivery of the policy will be through the Development Management process. Developer contributions will be sought through the use of planning obligations, as set out in Section 106 of the 1990 Town & Country Planning Act and based on the Planning Obligations SPD and its successors. The Council's preparation of a Community Infrastructure Levy charging schedule which came into effect on 6th April 2015 (or similar local tariff) may be considered. Delivery will also require working in partnership with public and private bodies.

CIL/Planning Obligations

Context

711.

B&NES Core Strategy Policy CP13 (Infrastructure Provision) sets out the Council's commitment to ensure new developments will be supported by the timely delivery of the required infrastructure to provide balanced and more self-contained communities.

712.

The key infrastructure needed to support the Core Strategy and Placemaking Plan is set out in the Infrastructure Delivery Plan (IDP December 2015). The IDP is a living document and will be updated to reflect the further discussions with utilities and service providers on the key infrastructure necessary to support the development of the allocated sites.

713.

The Council has approved its Community Infrastructure Levy (CIL) under the CIL Regulations 2010 (as amended) on 17th February 2015 and came into force on 6th April 2015. The CIL is a tool for local authorities to help deliver infrastructure to support the development of the area. The CIL is intended to provide infrastructure to support the development of the area, rather than making individual planning applications acceptable in planning terms. As a result, some site

specific impact mitigation may still be necessary in order for a development to be granted planning permission. A planning obligation can only be taken into account when determining a planning application if the obligation meets all of the following tests under CIL Regulation 122:

- necessary to make the development acceptable in planning terms
- directly related to the development; and
- fairly and reasonably related in scale and kind to the development.

714.

To clarify what types of infrastructure will no longer fall under planning obligations (S10)6, B&NES Council has published a list of infrastructure types and projects that it intends will be, or may be, wholly or partly funded by CIL. This is known as the Regulation 123 list and is published alongside the CIL Charging Schedule. This may be updated as necessary, through a process which is separate from the Local Plan. The details for the CIL can be found at

www.bathnes.gov.uk/CIL
