# **Arboricultural Assessment Report**

## LAND AT ST. MARY'S C OF E PRIMARY SCHOOL, TIMSBURY

On behalf of

Bath & north East Somerset Council

prepared by

Alister Rankine BSc. (Forestry); Tech. Cert. (Arbor. A.) *Arboricultural Consultant* 

October 2014

## CONTENTS

- **1.0 INTRODUCTION / SCOPE**
- 2.0 TREE ASSESSMENT OBSERVATIONS AND CONCLUSIONS
- APPENDIX A ARBORICULTURAL ASSESSMENT TREE SCHEDULE
- APPENDIX B TPO ASSESSMENT

Land at St. Mary's C of E Primary School, Timsbury

#### 1. INSTRUCTIONS/SCOPE

- 1.1 This report has been produced on behalf of Bath & North East Somerset Council.
- 1.2 The purpose of the report is to:
  - Assess tree currently growing on land at St. Mary's C of E Primary School, Timsbury (NGR Ref: ST 672 589) in order to assess their merit with regard to visual amenity and qualification for consideration of a Tree Preservation Order
  - Assess potential arboricultural constraints in relation to any future development in the field adjacent to the eastern boundary of the school grounds.
- 1.3 This is a preliminary report based on ground level inspections of the trees by a person experienced in arboriculture.
- 1.4 The trees were inspected on 27th October 2014. The weather conditions were dry, breezy and overcast

#### Land at St. Mary's C of E Primary School, Timsbury

#### 2. TREE ASSESSMENT OBSERVATIONS and CONCLUSIONS

- The tree inspected were classified into 14 No. individual trees and 3 No. groups of trees ((see Appendix A Tree Schedule)
- The trees are located on the eastern boundary of land at St Mary's C of E Primary School
- The trees form a robust linear feature on the boundary of the school and can easily be seen from the adjacent field that has a public footpath running from the south-west corner of the field at its entrance off North Road.
- The trees are currently not under any known threat.
- Should the adjacent field to the east be developed proximity of an inappropriate layout design could impact on the welfare of the trees.
- Several of the trees have potential to grow considerably larger and thereby increasing rooting zones and shading.
- A buffer of at least 15m from the trees should be observed to prevent physical impact and pressure for unacceptable works to be carried out on the tree that would compromise their collective visual and landscape amenity.
- Whilst it may not be immediately expedient to make a Tree Preservation Order a Wessex Tree Officers' Group TPO Assessment has been undertaken on all the individual trees and groups of trees. They all attain the threshold to be considered for a Tree Preservation Order (see Appendix B).

- In order to set a standard for the Tree Preservation Order assessment, the trees importance/visibility must be judged taking account of the factors which increase the trees desirability for inclusion, and areas of potential conflict associated with the built environment.
- It is suggested that the use of half points is used to increase accuracy and balance where categories do not quite match.
- Prior to assessing the tree(s) health it would be prudent to judge if the tree(s) should be assessed as a single specimen or a group.
- A score of 4 should be given in Section 2 when assessing a single tree.
- · If the tree scores less than 7 in Section 1, question the reason for making the Order.
- If the tree is marked as 'No' in Item 1.1, 'Extensive' in Item 3.4 or item 3.9, or 'High' in Item 3.14 or item 4.4, the tree should not be scheduled for a TPO unless there are extenuating circumstances.
- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.

- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.

- In order to set a standard for the Tree Preservation Order assessment, the trees importance/visibility must be judged taking account of the factors which increase the trees desirability for inclusion, and areas of potential conflict associated with the built environment.
- It is suggested that the use of half points is used to increase accuracy and balance where categories do not quite match.
- Prior to assessing the tree(s) health it would be prudent to judge if the tree(s) should be assessed as a single specimen or a group.
- A score of 4 should be given in Section 2 when assessing a single tree.
- · If the tree scores less than 7 in Section 1, question the reason for making the Order.
- If the tree is marked as 'No' in Item 1.1, 'Extensive' in Item 3.4 or item 3.9, or 'High' in Item 3.14 or item 4.4, the tree should not be scheduled for a TPO unless there are extenuating circumstances.
- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.

- If the tree is marked as 'No' in Item 1.1, 'Extensive' in Item 3.4 or item 3.9, or 'High' in Item 3.14 or item 4.4, the tree should not be scheduled for a TPO unless there are extenuating circumstances.
- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.

- In order to set a standard for the Tree Preservation Order assessment, the trees importance/visibility must be judged taking account of the factors which increase the trees desirability for inclusion, and areas of potential conflict associated with the built environment.
- It is suggested that the use of half points is used to increase accuracy and balance where categories do not quite match.
- Prior to assessing the tree(s) health it would be prudent to judge if the tree(s) should be assessed as a single specimen or a group.
- A score of 4 should be given in Section 2 when assessing a single tree.
- · If the tree scores less than 7 in Section 1, question the reason for making the Order.
- If the tree is marked as 'No' in Item 1.1, 'Extensive' in Item 3.4 or item 3.9, or 'High' in Item 3.14 or item 4.4, the tree should not be scheduled for a TPO unless there are extenuating circumstances.
- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.

Inspected by:	Alister Rankine	Date: 27th October 2014				

- In order to set a standard for the Tree Preservation Order assessment, the trees importance/visibility must be judged taking account of the factors which increase the trees desirability for inclusion, and areas of potential conflict associated with the built environment.
- It is suggested that the use of half points is used to increase accuracy and balance where categories do not quite match.
- Prior to assessing the tree(s) health it would be prudent to judge if the tree(s) should be assessed as a single specimen or a group.
- A score of 4 should be given in Section 2 when assessing a single tree.
- · If the tree scores less than 7 in Section 1, question the reason for making the Order.
- If the tree is marked as 'No' in Item 1.1, 'Extensive' in Item 3.4 or item 3.9, or 'High' in Item 3.14 or item 4.4, the tree should not be scheduled for a TPO unless there are extenuating circumstances.
- · In Item 3.10 the size of the tree should be judged according to the average for the species.
- · If the trees score less than 25 in Section 3 question the reason for making the Order.
- To be considered for a TPO the score should be at least <u>46</u> points, the exception being a tree of historic interest or a tree recognised as a key feature in the area.
- Trees being assessed as a group should score at least <u>51</u> points.
